ACKNOWLEDGMENTS

Without all of these loves, helps and endless support from many people during these two years, I would never complete this thesis.

First of all, I would like to express my genuine thanks to the Thai-German WADIS Project who provides all the existing data that are incredibly useful for my thesis, and Dr. Cristoph Grisseman, from the Institute for Geosciences and Natural Resources of the Federal Republic of Germany who guiding me through the way. His grateful thought and kindness are remarkable.

With a very thankful from my heart to my advisor Assist. Prof. Dr. Fongsaward S. Singharajwarapan for her support, advice and encouragement, and her Chiang Mai University's Groundwater Technology Service Center (GTSC) for financial support and tools.

Thank you Mr. Jens Radschinski for supporting me lots of information and data, and his companionship in many field surveys and many long days in laboratory.

A special thank to Prof. Dr. Brady Rhodes for a wonderful editing, and most of all for explore me the world. I also thank to Dr. Sarawut Chantraprasert for many good conversations, he let me borrow his laptop which helps me get through the most difficult period before finishing this thesis.

Thanks Moo and Ace, my best friends ever, all brothers and sisters in Geology Department, and everyone in the GTSC office, they are all my family.

Finally, I would like to contribute all of my success to my father and mother who give me the work ethic, free spirit, wisdom, and the endless love and care.

Nisa Sichan
