ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to those who have made significant contributions to the completion of this thesis.

I owe my greatest gratitude to my thesis advisor, Lecturer Dr. Piyapong Niamsup. I feel privileged for the opportunity I had for studying and working with him. Without his patience and teaching talent, this thesis would not have been possible.

This work contains a number of improvement based on comments and suggestions provided by Professor Amnuay Kananthai, Assoc. Prof. Dr. Suthep Suantai, Professor Dr. Jian-Hua Zheng and Assoc. Prof. Dr. Jantana Ayara-garnchanakul. It is my pleasure to express my sincere thanks to them for their generous assistance.

I also wish to thank Professor Dr. Jian-Hua Zheng for his helpful discussion concerning complex dynamics and value distribution theory, it is very useful for me. And I also thank Professor Dr. Jian-Hua Zheng's family for their care and support while I was at Tsinghua University, China.

I also wish to thank Professor Dr. Chung-Chun Yang for his helpful suggestion concerning algebraic differential equations, it will be useful for me in the future and his care while I was at Hong Kong University of Science and Technology, Hong Kong.

Of course, I gratefully appreciate my beloved family for their love and encouragement.

Thanks are also extended to all my best friends at Chiang Mai University for their help, friendship, and moral support.

Lastly, I extend my sincere thanks to the Institute for the Promotion of Teaching Science and Technology and the Thailand Research Fund for granting me the DPST Project scholarship and the Royal Golden Jubilee PhD. Program scholarship, respectively, which made my doctoral study possible.
