ACKNOWLEDGEMENT

There are many wonderful persons who kindly assist, encourage, and support me throughout the dissertation process. Without their help, the completion of this dissertation would not have been possible.

I would like to express my sincere gratitude and appreciation to Assistant Professor Dr. Prakin Suchaxaya, my major adviser, for insightful guidance and invaluable advice. Also, my profound gratitude goes to Assistant Professor Dr. Seepan Kantawang, my co-adviser, for her continuous support, and thoughtful suggestions. I am deeply grateful to Associate Professor Dr. Anannit Visudtibhan and Colonel Dr. Yotin Chinvarun, my co-advisers, for their time, insightful supervision, and needed guidance. Furthermore, I am indebted to Associate Professor Dr. Karen Schepp, my co-adviser who kindly shaped my dissertation proposal during my study at the School of Nursing, University of Washington at Seattle and who offer suggestions when I returned to my work in Thailand.

My deep appreciation is extended to Associate Professor Dr. Linchong Pothiban, Assistant Professor Dr. Khanokporn Sucamvang, and Assistant Professor Dr. Jariya Wittayasooporn, my examining committee member, for their intellectual suggestions and recommendations to strengthen the dissertation.

I would like to thank Dr. Aprasri Lusawat for her kind support; Dr. Elizabeth Geden, the Vice President of International Orem Society for Nursing Science and Scholarship Self-Care Deficit Nursing Theory, for her clarification and suggestion regarding the theoretical framework; and Professor Dr. Somchit

Hanucharurnkul for her encouragement and inspiration. My gratefulness is also extended to Associate Professor Dr Pataraumpai Pipatananond. Although she passed away, her work remains a great inspiration to me.

I owe Professor Dr. Joan Austin, Professor Dr. Deirdre Caplin, and Professor Dr. Colleen Dilorio for permission to use their instruments as well as the suggestions throughout the back translation process. My thankfulness also goes to all experts who validated the forward translation and content validity of the instruments. Special thanks are extended to Dr. Porntip Malathum and Ms. Umaporn Udomtrupayakul who kindly gave advice on the computer program need for data analysis. I also thank Associate Professor Dr. Punchalee Wasanasomsithi from Chulalongkorn University for her kind assistance with the back-translation of the instrument and her help with my English writing.

I would like to thank all the adolescents with epilepsy and their parents who agreed to participate in this study. Without them, this study would not have been possible. I am thankful for the cooperation and facilitation from nurses, physicians, especially Associate Professor Dr. Chaichon locharernkul from Chulalongkorn University, and other health care teams at four research sites.

I would also like to express my gratitude to the Ministry of University Affair for the scholarship, and the Graduate School of Chiang Mai University for the research grant. My appreciation goes to my colleagues at Nursing Department of Ramathibodi Hospital, for providing me with the opportunity to pursue my doctoral studies and for assisting me with the workload during my absence.

My appreciation is extended to my doctoral classmates and friends for sharing knowledge, experience, friendship, and assistance, and for making my study not only academically but also personally rewarding.

Last but not least, my heartfelt gratitude and appreciation is extended to my family—my father (Somkaet Kaewbut) and my mother (Homhuon Kaewbut) who always love, encourage, and support me; my husband (Chatchai Kongsaktrakul), who never once fails to show his love, understanding, support, and sacrifice; and my children (Pun-yapa and Virada Kongsaktrakul), who are the source of my happiness and the inspiration to achieve all that I can.

Chuanruedee Kongsaktrakul
