## ACKNOWLEDGEMENT

Without assistance and cooperation of many people, I couldn't achieve what I set out to do for this study. I hope they know how deeply I appreciate their generous expenditure of time and effort; they did not blunt the sharpness of my critical acuity on the grounds of warm friendship. My chief debt of gratitude is owed to Associate Professor Dr. Warunee Fongkaew, my major advisor, who has inspired me to study this topic and has cultivated my professional potential. I'm also grateful to Professor Dr. Antonia M. Villaruel for the knowledgeable and sympathetic care she gave me while I was living in the US. She has kindly worked with me as the thesis committee and has constantly encouraged me. Her support is greatly appreciated. Associate Professor Dr. Jayanton Patumanond has been kindly given me helpful suggestions related to statistical analysis.

In particular, I would like to express my sincere appreciation to my participants who contributed to this study. Their commitment to inform their personal information made this work possible. I wish to also acknowledge to committees of the Graduate School, Chiang Mai University, and the Thai Health Promoting Foundation for my research funding.

My family deserves my sincere appreciation for their invaluable support. Thanks and love to all my friends for their aids that were given most generously. You know who you are.

My warm and grateful appreciation goes to Dr. Suparang Indhrarun and Associate Professor Chujit Khewsomboon, incisive editors. Their abundance of ideas has been a joy to work with these five years.

*Rungrat Srisuriyawet*
