Generation of Far Infra-red Radiation from
Relativistic Electron Beam

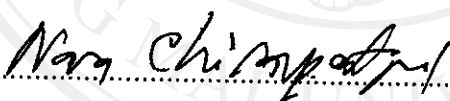

SAKHORN RIMJAEM

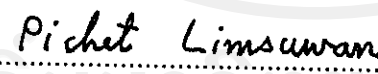

THIS THESIS HAS BEEN APPROVED
TO BE A PARTIAL FULFILLMENT OF THE REQUIREMENTS
FOR THE DEGREE OF DOCTOR OF PHILOSOPHY
IN PHYSICS

EXAMINING COMMITTEE

..... CHAIRPERSON
Prof. Dr. Thiraphat Vilaithong

..... MEMBER
Prof. Dr. Helmut Wiedemann

..... MEMBER
Assoc. Prof. Dr. Nara Chirapatpimol

..... MEMBER
Assoc. Prof. Dr. Pichet Limsuwan

..... MEMBER
Asst. Prof. Dr. Chitlada Thongbai

28 April 2006

ACKNOWLEDGEMENTS

This thesis would not exist without participation and support from many people and organizations. It is my pleasure to acknowledge their contributions in this thesis. First, I would like to thank Prof.Dr.Thiraphat Vilaithong, my thesis advisor and director of the Fast Neutron Research Facility (FNRF), for establishing the SURIYA project and providing me the great opportunity on working in this challenging project. I am very grateful to all his support for my studying and working at FNRF. Without his support, SURIYA project and my research work would have not come this far.

I sincerely thank Prof.Dr.Helmut Wiedemann, my thesis co-advisor, for his patience and kindness in advising, guiding and encouraging me throughout this research. Many works I have done for this thesis were benefited from his suggestion and ideas. Special thanks are due for his always welcome and taking care of me every time of my visits to Stanford. I am very grateful for his carefully correction and valuable suggestion in my thesis manuscript. This thesis would not be completed and I never finish my Ph.D. without Professor Wiedemann's efforts. He is not only my research supervisor but also my teacher of life. Working, studying and discussing with him throughout these years benefit me in many aspects. It was my best fortune to know Professor Wiedemann and have him as my supervisor.

I am thankful to Assoc.Prof.Dr.Nara Chirapatpimol, Assoc.Prof.Dr.Pichet Limsuwan and Asst.Prof.Dr.Chitrlada Thongbai for taking their time on reading my thesis and participating as examination committee. I wish to express my special gratitude to Assoc.Prof.Dr.Nara Chirapatpimol for introducing me to the field of particle beam physics and for teaching me a basic skill of doing research since I worked with him for my bachelor degree project. To study Ph.D. in this field would not have happened without the initial support from him. The SURIYA project would not be in this state without Asst.Prof.Dr.Chitrlada Thongbai, who is always open minded and an understanding supervisor. She gives me always the useful ideas on how to achieve good experimental results. To work with her is the best practice on how to do and discuss research. I am truly thank to her.

Several equipments at the SURIYA system became available from different places. Thanks for the klystrons and associated modulators go to the Chiang Mai hospital and the Sirirat hospital. I also thank for the donation of the linac section by the Hansen Experimental Physics laboratory (HEPL) of Stanford University. I am grateful to Mr. Mike Nalls of SSRL for teaching me how to install and test a cathode and for his general support concerning all cathode issues. I am thankful to Stanford Synchrotron Research Laboratory (SSRL), National Synchrotron Research Center (NSRC) and Rajamangala Institute of Technology (RIT) for the use of a network analyzer as well as National Synchrotron Radiation Research Center (NSRRC) for the RF-gun brazing.

Many experiments described in this thesis could not have been done without the efforts and collaboration from SURIYA personnel. My true thanks to all of them. Thank you Michael W. Rhode for his help in all aspects of electronics and control programs. Many thanks to Pathom Wichisirimongkol and Nopadon Kangrang for all support in mechanical engineering as well as a lot of help in experimental setup and the machine operation. I also thank to Vitoon Jinamoon for his support on electronic issues and to Jatuporn Saisut for his contribution to construct the alpha magnet and the energy spectrometer. The beam experiments could not be done without his magnets. Special thanks to Somwan Chumphongphan for his great support while working with us at SURIYA. Several diagnostic methods and setups came from his ideas. Last, but not least, I am truly thankful to Keerati Kusoljariyakul for his participation in all experiments I have done for this thesis. Thank you for devoting all your time and helping me in running process, even sometime we had to work for long periods until very late in the night. It was true that I could never have finished my Ph.D. without all the help and support from the members of the SURIYA group.

A special thanks also goes to all FNRF personnel and friends for their supports and friendships throughout my long study and working period at this laboratory. I am grateful to Dr.Dusadee Suwannakachorn for her useful comments and suggestions in many occasions in my research work as well as in personal issue. Thank you to Thanita Deatdumrong, Kittiya Osathapan, Pannee Suttikul and Sureeporn Sarapirom for their friendly help in my scholarship and research paper works as well as for ordering the necessary equipments and material relative to my research. My further acknowledgement goes to the team of FNRF machine shop for the support in component machining issues. My special thanks goes to

my college and university friends at FNRF and Chiang Mai University, especially to Pimporn Junphong, Min Medhisuwakul and Somjai Saengyuenyongpipat for sharing their experiences, knowledge and useful information in many occasions.

I would like to acknowledge the financial support from the Royal Golden Jubilee Scholarship Program (3.F.CM/41/B.1) which provided me the opportunity to follow my Ph.D. study as well as giving me the support for doing research for several months at Stanford University. I am thankful to the Physics Department, the Faculty of Science and the Graduate School of Chiang Mai University for accepting me as a Ph.D. candidate and for the financial support to present my work at international conferences for several times. I would like to thank for the financial support to SURIYA project of the Thailand Research Fund and the National Research Council of Thailand.

Finally, my personal thank goes to my family; my parents and my dear brother, for their warm supporting throughout my life. I would like to thank them for all the trust and love and being so proud of me. Thank you, mother, for your encouragement and understanding throughout my long education. Your love always provided me the strength to get through all the problems. At last I devote my Ph.D. to the memory of my father who was always my inspiration for studying and for everything in life.

Sakhorn Rimjaem
