LIST OF TABLES	XIII
LIST OF ILLUSTRATIONS	XV
ABBREVIATION	XVII
CHAPTER1: INTRODUCTION	
1.1 Introduction to Formaldehyde and Passive Sampling	1
1.2 Formaldehyde Information	5
1.2.1 Physical and chemical properties	5
1.2.2 Source exposure	6
1.2.3 Levels in homes	7
1.2.4 Health affects	7
1.2.5 Usage	9
1.2.6 Regulations	10
1.2.7 Guidelines	11
1.2.8 Workplace indoor monitoring	12
1.3 Sampling and Analysis of formaldehydes	13
1.3.1 Passive Sampling	13
1.3.2 Formaldehyde passive samplers	23

1.3.3 Analysis method 25

1.3.4 Type of sorbent 25

1.3.5 Calibration system for passive samplers 26

1.4 Spectrophotometer for formaldehyde determination 27

1.5 Research objectives 30

CHAPTER2: EXPERIMENTAL

2.1 Chemicals 31

2.2 Instruments and apparatus 31

2.3 Preparation of Sampling Tubes 32

2.3.1 Adsorbent conditioning 32

2.3.2 Sorbent of formaldehyde 33

2.3.3 Passive Sampling Tube 34

2.4 Analytical methodology 36

2.4.1 Preparation of calibration curve of formaldehyde 36

2.4.2 Desorption (extraction) of filter paper 36

2.4.3 Color Development 36

2.4.4 Linear dynamic range (LDR) 37

2.4.5 Detection limit of spectrophotometry 37

2.5 Formaldehyde Exposure Chamber System 39

2.5.1 Humidifier unit 41

2.5.2 Formaldehyde generator unit 41

Page

2.5.3 Mixing chamber 42

2.5.4 Exposure chamber 42

2.5.5 Gas collector unit 43

2.6 Determination of analyte concentration in the chamber 44

2.7 Optimization of sampler 45

2.7.1 Detection limit of sampler 45

2.7.2 Determination of total air resistance 45

2.7.3 Optimization types of impregnated paper 46

2.7.4 Optimization types of diffusion tube 47

2.7.5 Desorption efficiency and number of filter layers 47

2.7.6 Stability of sample 47

2.8 Validation of sampler 47

2.8.1 Effect of wind velocity 48

2.8.2 Effect of relative humidity 49

2.8.3 Effect of temperature 49

2.8.4 Effect of sampler orientation 49

2.8.5 Effect of reverse diffusion 50

2.8.6 Sampling time 51

2.8.7 Comparison of self constructed passive sampler and commercial passive sampler 51

CHAPTER 3: RESULTS AND DISCUSSION

3.1 Determination of formaldehyde by spectrophotometry 53

3.1.1 Calibration curve of formaldehyde 53

3.1.2 Linearity of range 54

3.2 Detection limit of spectrophotometry 55

3.3 Optimization of passive sampler 56

3.3.1 Detection limit of passive sampler 56

3.3.2. Determination of total air resistance 68

3.3.3 Selection of types of adsorbent 60

3.3.4 Selection types of diffusion tube 62

3.3.5. Desorption efficiency and number of filter layers 64

3.3.6 Storage stability 68

3.4 Validation of sampler 69

3.4.1 Validation of wind velocity effect 69

3.4.2 Validation of relative humidity effect 74

3.4.3 Validation wind of temperature effect 78

3.4.5 Effect of orientation 82

3.4.6 Effect of reverse diffusion 86

3.5 Determination of formaldehyde indoors 88

3.5.1 Sampling duration 88

LIST OF TABLES

Table	Page
1.1 Application of passive samplers in air pollution-vegetation effects related studies.	18
1.2 Comparative characteristics of passive samplers and active (continuous) monitors for quantifying ambient air pollutant concentrations	20
2.1 Detail of adsorbent	32
2.2 Speciation of passive sampler	52
3.1 Absorbance of formaldehyde	53
3.2 Detection limit of spectrophotometry for formaldehyde	56
3.3 Data of detection limit of formaldehyde passive sampler	57
3.4 Data of detection limit of formaldehyde passive sampler (continued)	58
3.5 Dimension factor of formaldehyde passive sampler for total air resistance determination	59
3.6 Percent recovery of formaldehyde form different types of adsorbent	61
3.7 Types of diffusion tube and their percent recoveries for formaldehyde	63
3.8 Percent recoveries of formaldehyde from different number of filter layers	66
3.9 Wind velocity effect on the sampling low concentration Level	71
3.10 Validation of relative humidity effect on the sampling low concentration level	75

Table **Page**

3.11 Validation of temperature effect on the sampling at low concentration level 79

3.12 Effect of sampler of orientation on absorbance formaldehyde Concentration 84

3.13 Effect the reverse diffusion on formaldehyde passive sampler 87

3.14 Effect of sampling duration on formaldehyde concentration 88

3.15 Difference of formaldehyde concentrations and exposure duration 92

3.16 Indoor formaldehyde concentrations of 8 and 24 hours 92

3.17 Comparison of indoor formaldehyde concentrations collected by Self-constructed sampler and commercial sampler (SKC) at 8 hours exposure duration 96

3.18 Comparison of indoor formaldehyde concentrations collected by Self-constructed sampler and commercial sampler (SKC) at 24 hours exposure duration 97

3.19 Comparison of indoor formaldehyde concentrations collected by Self-constructed sampler and commercial sampler (SKC) at 7 days exposure duration 98

LIST OF ILLUSTRATIONS

Figure	Page
1.1 Chemical structure of Formaldehyde	6
2.1 Reaction of bisulfite adduct	33
2.2 Purple mono-cationic chromogen	34
2.3 (a) dimension of passive sampler (b) Self-constructed passive sampler	35
2.4 PTFE tread seal tape	35
2.5 Diagrams of Formaldehyde Exposure Chamber System	40
2.6 Formaldehyde Exposure Chamber System	40
2.7 Humidifier units	41
2.8 Formaldehyde vapor delivery unit	42
2.9 Diagram of the exposure chamber	43
2.10 continuously gas collector	44
2.11 Formaldehyde Passive Sampler (SKC inc.)	51
3.1 Calibration curve of formaldehyde	54
3.2 Linear dynamic range of CTA method	55
3.3 Percent recovery of the formaldehyde from difference types of adsorbent	61
3.4 Types of diffusion tube and percent recovery of formaldehyde	63

Figure **Page**

3.5 Percent recoveries of formaldehyde from different numbers of filter layer 65

3.6 storage stability of formaldehyde passive sampler 68

3.7 Wind velocity effect on efficiency of formaldehyde sampler 70

3.8 Relative Humidity effect on capacity of formaldehyde passive sampler 74

3.9 validation of temperature effect on capacity of formaldehyde passive sampler 78

3.10 Effect of sampler of orientation on absorbance formaldehyde concentration 83

3.11 Effect of reverse diffusion on formaldehyde passive sampler 86

3.12 Formaldehyde concentrations of different sampling duration 91

3.13 Indoor formaldehyde concentrations of 8 and 24 hours 93

3.14 Comparison of indoor formaldehyde concentrations collected by SCS and commercial one 95

3.15 The slope of decreasing of concentration for 8 hours to 7 days 95

BREVIATIONS

mg/m^3	microgram per cubic meter
µg /ml	microgram per milliter
nm	nanometer
ml	milliter
s	second
mit	minute
m	meter
g	gram
ppm	Part per million
m/s	meter per second
VOCs	Volatile Organic Compounds
NIOSH	National Institute for Occupational Safety and Health
PELs	permissible exposure limits
STEL	Short term exposure limit
HPLC	High Performance Liquid Chromatography
FID	Flame ionization detector
PP	Polypropylene
SCS	Self-Constructed Sampler
UFFI	Urea-formaldehyde foam insulation
TQ	Threshold Quantity
HAP	Hazardous Air Pollutant
TPQ	Threshold Planning Quantity

ลิขสิทธิ์มหาวิทยาลัยเชียงใหม่
Copyright© by Chiang Mai University
All rights reserved

OSHA	the Occupational Safety and Health Administration
TLV-C	Threshold Limit Value - Ceiling
REL	Recommended Exposure Limit
IDLH	Immediately Dangerous to Life and Health
DNPH	2, 4- dinitrophenylhydrazine
MDNPH	1-methyl-1-(2,4-dinitrophenyl)hydrazine)
CTA	Chromotropic acid
2-HMP	Hydroxymethyl)piperidine
LOD	Limit of detection
LOQ	Limit of Quantitation
RSD	The relative standard deviation
PS	Polystyrene
PE	Polyethylene
RCB	Randomized Complete Block Design
HOCs	Hydrophobic Organic Compounds
