| Acknowledgements                                                                                                                        | iii  |
| Abstract in Thai                                                                                                                        | iv   |
| Abstract in English                                                                                                                     | vi   |
| Chapter 1 Introduction                                                                                                                  | 1    |
| Chapter 2 Preliminaries                                                                                                                 | 9    |
| 2.1 Notations . . . . .                                                                                                                 | 9    |
| 2.2 Lyapunov Function . . . . .                                                                                                         | 9    |
| 2.3 Stability . . . . .                                                                                                                 | 10   |
| 2.4 Types of Matrix . . . . .                                                                                                           | 12   |
| Chapter 3 Main Results                                                                                                                  | 13   |
| 3.1 Robust Stability of Discrete-Time Cellular<br>Neural Networks with Time Delay Systems. . . . .                                      | 15   |
| 3.2 Robust Stability of Discrete-Time Cellular<br>Neural Networks with Time Delay Systems<br>with Polytopic Type Uncertainties. . . . . | 31   |
| Chapter 4 Conclusion                                                                                                                    | 49   |
| Bibliography                                                                                                                            | 56   |
| Vita                                                                                                                                    | 58   |

## LIST OF ILLUSTRATIONS

| Figure                                                                  | Page |
|-------------------------------------------------------------------------|------|
| 3.1 The solutions trajectory of system (3.5) in Example 3.1.1 . . . . . | 22   |
| 3.2 The solutions trajectory of system (3.5) in Example 3.1.2 . . . . . | 26   |
| 3.3 The solutions trajectory of system (3.5) in Example 3.1.3 . . . . . | 30   |
| 3.4 The solutions trajectory of system (3.5) in Example 3.2.1 . . . . . | 38   |
| 3.5 The solutions trajectory of system (3.5) in Example 3.2.1 . . . . . | 39   |
| 3.6 The solutions trajectory of system (3.5) in Example 3.2.2 . . . . . | 47   |
| 3.7 The solutions trajectory of system (3.5) in Example 3.2.2 . . . . . | 48   |
