ACKNOWLEDGEMENT

I express my profound gratitude and am greatly indebted to my supervisor, Dr. Jaroon Jakmune for giving me this great opportunity, valuable guidance, kind suggestion and encouragement throughout this work. I am grateful to my co-supervisor, Prof. Dr. Kate Grudpan (Department of Chemistry, Faculty of Science, Chiang Mai University) for his valuable comments, guidance and discussions. I am also sincerely grateful to my co-supervisor Prof. Dr. Purnendu K. Dasgupta (Jenkins Garrett Professor, Department of Chemistry and Biochemistry, University of Texas at Arlington, Texas, USA) for his valuable guidance, suggestion and help, especially during his research in the Dasgupta laboratory at Texas Tech University.

I gratefully acknowledge the Development and Promotion of Science and Technology Talented project (DPST) for granting me the scholarship which made this effort possible. The Center for Innovation in Chemistry: Postgraduate Education and Research Program in Chemistry (PERCH-CIC) is also acknowledged for partial support. I further thank the Graduate School and Faculty of Science, Chiang Mai University.

I acknowledge all my colleagues at the Dasgupta Research Group, Department of Chemistry and Biochemistry, Texas Tech University, USA and all members in the Flow Based Analysis (FBA) Research Group, Department of Chemistry, Chiang Mai University for their care and help.

I would like to express my deep gratitude to my parents and my brother for their love, encouragement and understanding. I thank all my friends for their love and support.

Finally, anything good in this thesis is ultimately attributable to Lord Buddha,
superb dhamma, Lord Bodhisatva, Lord noble disciple monk, and all of my teachers.

Tinakorn Kanyanee
