ACKNOWLEDGEMENT	iii
ABSTRACT (in Thai)	iv
ABSTRACT (in English)	vi
TABLE OF CONTENTS	vii
LIST OF TABLES	viii
LIST OF ILLUSTRATIONS	ix
CHAPTER 1 INTRODUCTION	1
1.1 Pre-Jurassic volcanic rocks in Thailand and vicinity	1
1.2 Scope of study	6
1.3 Location and accessibility	6
1.4 Physiographic description	10
CHAPTER 2 GEOLOGICAL SETTING	11
2.1 Permian sedimentary rocks	11
2.2 Triassic sedimentary rocks	12
2.3 Upper Triassic – Lower Jurassic volcanic rocks	13
2.4 Cenozoic volcanic rocks	14
2.5 Quaternary unconsolidated sediments	14
2.6 Upper Triassic plutonic rocks	14
CHAPTER 3 OCCURRENCE AND PETROGRAPHY	15
3.1 Occurrence	15
3.2 Lithology and petrography	21
CHAPTER 4 GEOCHEMISTRY	40
4.1 Sample preparation	40
4.2 Analytical techniques	40
4.3 Element mobility	42
4.4 Magmatic affinity	49
4.5 Tectonic setting of eruption	53
CHAPTER 5 CONCLUSION	62
REFERENCES	64
APPENDIX	73
CIRRICULUM VITAE	108

LIST OF TABLES

Table		Page
4.1	Whole-rock analyses and some selected ratios of the studied least-altered volcanic rocks and hypabyssal rocks	43
4.2	REE analyses and some selected chondrite-normalized ratios of the studied least-altered volcanic rocks	48

LIST OF ILLUSTRATIONS

Figure		Page
1.1	Distribution of pre-Cretaceous volcanic rocks in Thailand	3
1.2	Geological map of the Long District area	7
1.3	Topographic map of the Long District area	8
1.4	Road map of the Long District area	9
3.1	Map showing the distribution of Late Triassic – Early Jurassic volcanic rocks in the project area and the locations of samples presented in this study	16
3.2	Photograph showing the exposure of pyroclastic breccia at grid reference 950917	17
3.3	Photograph showing the contact between tuff and pyroclastic breccia at grid reference 804996	17
3.4	Photograph showing grading beds of pyroclastic rocks at grid reference 011914	18
3.5	Photograph showing flow folds at grid reference 985783	18
3.6	Photograph showing the exposure of light gray rhyolite at grid reference 980945	19
3.7	Photograph showing the outcrop of tuff that is overlain by a grayish black basaltic flow at grid reference 030092	19
3.8	Photograph showing <i>in situ</i> float of volcanic clasts at grid reference 935960	20
3.9	Photograph showing float rocks in the creek at grid reference 953917	20
3.10	Photomicrographs of andesite (sample number MR-12) showing phenocrysts/microphenocrysts of plagioclase, megacrysts of clinopyroxene, and altered glassy groundmass	23
3.11	Photomicrograph of andesite (sample number PM-1) showing phenocrysts/microphenocrysts of plagioclase, clinopyroxene and unidentified mafic mineral, and a polymineralic clusters of plagioclase and clinopyroxene megacrysts	24
3.12	Photomicrographs of andesite/basalt (sample number MP-7) showing microphenocrysts of plagioclase, clinopyroxene and unidentified mafic minerals in the felty groundmass	25

Figure		Page
3.13	Photomicrographs of andesite/basalt (sample number MP-13) showing microphenocrysts of plagioclase and unidentified mafic mineral with amphibole rims in the trachytic groundmass	26
3.14	Photomicrograph of andesite (sample number MT-5) showing a polyminerals clusters of plagioclase, clinopyroxene, unidentified mafic mineral and Fe-Ti oxide megacrysts in the felty groundmass	27
3.15	Photomicrographs of andesite (sample number MT-5) showing a portion of polyminerals cluster of plagioclase, clinopyroxene, Fe-Ti oxide and unidentified mafic mineral megacrysts, and a monomineralic cluster of plagioclase megacrysts in the felty groundmass	28
3.16	Photomicrographs of andesite (sample number MP-10) showing microphenocrysts of plagioclase, clinopyroxene and Fe-Ti oxide in the felty groundmass	29
3.17	Photomicrographs of andesite/basalt (sample number MP-13) showing phenocrysts/microphenocrysts of plagioclase, clinopyroxene with amphibole rims, and unidentified mafic mineral in the trachytic groundmass	30
3.18	Photomicrographs of andesite (sample number MR-8) showing megacrysts of clinopyroxene and unidentified mafic mineral, and a polyminerals cluster of clinopyroxene and unidentified mafic mineral megacrysts. The groundmass clinopyroxene grains are intergranular to plagioclase laths	31
3.19	Photomicrographs of andesite (sample number MT-2) showing a polyminerals cluster of unidentified mafic mineral and apatite megacrysts in the felty groundmass	32
3.20	Photomicrographs of andesite (sample number MP-4) showing phenocrysts/microphenocrysts of unidentified mafic mineral in the trachytic groundmass	33
3.21	Photomicrographs of andesite (sample number MT-2) showing a polyminerals cluster of plagioclase, unidentified mafic mineral, Fe-Ti oxide and apatite megacrysts in the felty groundmass	34
3.22	Photomicrographs of microdiorite/microgabbro (sample number BK-2) showing microphenocrysts of plagioclase and clinopyroxene	38

Figure		Page
3.23	Photomicrographs of microdiorite (sample number MR-9) showing a seriate texture, and crystals of plagioclase and clinopyroxene	39
4.1	Plot of Zr/TiO_2 against Nb/Y for the studied least-altered volcanic rocks and hypabyssal rocks	50
4.2	FeO^*/MgO variation diagrams for P_2O_5 and TiO_2 of the studied least-altered volcanic rocks and hypabyssal rocks	51
4.3	FeO^*/MgO variation diagrams for Nb, Y, Zr, Ni, Cr, V and Sc for the studied least-altered volcanic rocks and hypabyssal rocks	52
4.4	Plots of Ti, Nb and Y against Zr for the studied least-altered volcanic rocks and hypabyssal rocks	54
4.5	Chondrite-normalized REE patterns for the representative least-altered volcanic rocks presented in this study	55
4.6	Ti- Zr-Y tectonic discrimination diagram for the studied least-altered volcanic rocks and hypabyssal rocks	55
4.7	Ternary Hf-Th-Ta tectonic discrimination diagram for the studied least-altered volcanic rocks	56
4.8	La-Y-Nb tectonic discrimination diagram for the representatives of the studied least-altered volcanic rocks	57
4.9	Zr/Y-Ti/Y tectonic discrimination diagram for the studied least-altered volcanic rocks and hypabyssal rocks	58
4.10	Zr-Nb-Y tectonic discrimination diagram for the studied least-altered volcanic rocks and hypabyssal rocks	58
4.11	Ti-V tectonic discrimination diagram for the studied least-altered volcanic rocks and hypabyssal rocks	59
4.12	Zr/Y – Zr discrimination diagram for the studied least-altered volcanic rocks and hypabyssal rocks	59
4.13	Plots of chondrite-normalized REE and N-MORB normalized multi-elements for the representative volcanic rocks presented in this study, and their modern analogs, calc-alkalic basalt and basaltic andesite from Salina Island, Aeolian Arc, Italy	61
