ACKNOWLEDGEMENTS

I would like to express my sincerely gratitude to my supervisor Dr. Jantrawan Pumchusak for providing guidance and encouragement throughout my research. I will never forget the support she gave at my most difficult times.

I would like also to thank my Ph.D. thesis committee: Assoc. Prof. Dr. Taweechai Amornsakchai from Department of Chemistry, Mahidol University, Dr. Robert Molloy and Asst. Prof. Dr. Teerapol Wongchanapiboon from Department of Chemistry, Faculty of Science, Chiang Mai University and Dr. Pornchai Rachtanapun from Department of Packaging Technology, Faculty of Agro-Industry, Chiang Mai University.

Special thanks to Prof. Chul B. Park from the Department of Mechanical and Industrial Engineering, University of Toronto, Canada for providing the research guidance and the great opportunity to collaborate with his research group (MPML; Microcellular Plastics Manufacturing Laboratory) until my partial research was successfully finished. Furthermore, I would like to thank my colleagues. They include Patrick C. Lee, Jing Wang, S.G. Ryan Kim, Gangjian Guo, Guangming Lee, John Lee Wo, Sue Cheng, Lilac Cuiling Wang, Mohammed Serry, Kevin Lee, and others in the MPML for their help and friendship during the year when in Toronto. Especially, sincerely thank to Patrick lee and Jing Wang for the professional technical support and spent their help to my work in the part of continuous foaming processes that also be included in a part of my thesis. I would like to thank Terence Ying, the undergraduate student, who worked with me. April Binnie, Dr. Jin Wang, and Ivan

Gutierrez are appreciated for contribution the group's activities. The gratefully thank, I would like to present to Mrs. Matilda and Mr. Nick Bianchi for special looking after me as a member of their family when in Toronto. I would like to thank Thai Student Association (TSA) in Toronto for seeking a home and making my colorful life for a year in Toronto.

I would like to acknowledge Mr. Manop Palivanich and Mr. Akadet Phuyousuk for all kindly technical supports to design instrument which used in my experiment, especially in the part of solid-state batch foaming process. I would like to thank all people and friends in the Department of Industrial Chemistry, Faculty of Science, Chiang Mai University for any encouraging and friendship.

Moreover, this research could not be started and successfully accomplished without the financial support provided by the Royal Thai Government in a form of a scholarship under the Staff Development Program at Naresuan University, Thailand, and a scholarship for graduate research by the Graduate School of Chiang Mai University, Chiang Mai, Thailand. Furthermore, HMC Polymers Company Limited, Thailand and the Honam Petrochemical Company, Korean are appreciated for generous support of polymer materials (Honam SMS-514 and EP380T SW-844, respectively).

Finally, I would like to thank my great father and my beloved mother with the love for their understanding and encouragement. I am very proud to be their daughter. I further would like to thank for Mr. Manas Jaimasith who has shared common thoughts and his continuous efforts to provide me with his love and support.

WANRUDEE KAEWMESRI
