ACKNOWLEDGEMENT

This thesis was prepared with the help of many people. With profound gratitude and sincerity, I wish to acknowledge the following persons, without whose help, advice, cooperation, normal support and power work would not have been completed.

First of all, I would like to express my deepest appreciation, respect and gratitude to my chief advisor, Assoc. Prof. Dr. Ampai Panthong for her excellent guidance, encouragement, valuable advice, improvement of the English language of this thesis and her support of my studies.

I am most grateful to the staff of the Department of Pharmacology, Faculty of Medicine, Chiang Mai University, especially Dr. Parirat Khonsung and Dr. Puongtip Kunanusorn, my thesis co-advisors, for their devotion, enthusiastic teaching, and suggestions during this research. Deepest appreciation is extended to Assoc. Prof. Dr. Chaichan Sangdee for his generous improvement of the English language of this thesis.

I owe special gratitude of Prof. Dr. Vichai Reutrakul, Director of the Centre for Innovation in Chemistry: The Program of Postgraduate Education and Research in Chemistry (PERCH-CIC), for providing the plant extract and animals used in this research.

Thankfulness for help is extended to the staff of Labor Unit of Maharaj Nakorn Chiang Mai Hospital for their kind assistance in providing human umbilical vein.

Finally, I gratefully appreciate the staff of the scientists and researchers of various works whose names are listed in the part of references who have given me ideas and inspiration for this work.

Arun Phacharoen
