CONCLUSION

The results of our study show no significant differences between the generic donepezil HCl and Aricept[®] with respect to the rate (C_{max} and T_{max}) and the extent of absorption (AUC). The means and parametric 90% CI of the generic donepezil HCl/Aricept[®] ratios of AUC_{0-t}, AUC_{0- ∞}, and C_{max} were within the acceptable range of standard Thai FDA guidelines. Therefore, this study demonstrates the bioequivalence of the two products.
