ACKNOWLEDGMENTS

In considering my debt, my deepest thanks go to Bahnar villagers in Buon Luoi of So Pai Commune (K'Bang District, Gia Lai Province), whose lives I intruded without their invitation. Their lives and stories provided me not only knowledge, but also the new way I look at the world. Their kindness, generosity and tolerance to hours for my interviews and repeated conversations on complicated issues have helped me to make this thesis.

During my field trips in the Central Highlands, many people helped in individual ways. It would be impossible to list them all here, but I would like in particular to express my deepest gratitude to Bui Trong Thuy and his family for their hospitality and supports. I will never forget about the cares of Thuy's father, Mr. Bui Trong Truan, when I came out from forests with malaria.

I express my greatest thankfulness to Dr. Chayan Vaddhanaphuti, my academic advisor and chairperson of my thesis examination committee, for his critical suggestions and comments, for his long hours reading my writings that helped me to finalize this study. I would also like to express my special thanks to Professor Dr. Anan Ganjanapan for his interesting and useful lectures of theories and concepts in sustainable development, economics of anthropology and sociology, land tenure system and community control of resources, which have opened to me a new horizon of intellect that has brightened my worldview, and for his comments in guiding me to develop and complete this thesis. I am grateful to Ajran Suriya Smutkupt, who has spent hours for reading and commenting on chapters.

Great respect and appreciation go to other lecturers and staffs of Regional Center for Social Sciences and Sustainable Development (RCSD) at Chiang Mai University (CMU). To Associate Professor Dr. Chusak Wittayapak, Professor Dr. Yos Santasombat and Dr. Pinkeaw Laungaramsri, who have shared and provided creative instructions for my ideas. To other staffs at RCSD, who have provided great supports during my study. To say more would be little.

I wish to thank the staff of Library of Faculty of Social Sciences and Main Library of CMU for their kindness and useful guidelines whenever I came to borrow books at the libraries.

I had also received great supports from Vietnamese Thais resided at Chiang Mai, Vietnamese students in Chiang Mai University as well as other international students at RCSD. I take this opportunity to express my sincerely thanks to all of them.

Animated conversations with Hoang Cam, a doctor candidate at the Department of Anthropology, University of Washington (USA), during his visiting time held by RCSD set me off on new leads throughout my research, and I would like to thank him especially for his friendship and encouragement.

My study and fieldwork would not have been possible without scholarship provided by Ford Foundation through the Center for Educational Exchange with Vietnam (CEEVN), and other supports of Forest Science Institute of Vietnam and Fellowship Steering Committee at the Ministry of Agriculture and Rural Development. The generosity and assistance from these institutions are greatly appreciated. I would like to express my thanks to those at CEEVN, notably Wanda R. Kraybill and Nguyen Xuan Huong, and at Fellowship Steering Committee, Do Thi Dung, who efficiently made arrangements for my administrative procedures.

My long study at RSCD (CMU) and fieldwork in the Central Highlands were made possible with the critical supports and tolerance from my family. I owe the deepest gratitude to my wife, Lien, my son, Quang, and my small daughter, Hanh; to my parents and my parents-in-law who have always given to me; to my younger sister and brother. The result of my study owes more to them than anyone else.

Finally, although this thesis is a product of the deeply appreciated assistance and support from a great number of people, needless to say, I am solely responsible for any mistakes or inadequacies that the readers may find in it.

LE QUANG TRUNG
