ACKNOWLEDGEMENT

There are several people to whom I am grateful for their various contributions to my Master degree in the Veterinary Public Health course and to my thesis' work. Above all, I would like to express my gratitude to my supervisors Assoc. Prof. Dr. Peter Paulsen and Dr. Anucha Sirimalaisuwan for their constant encouragement and for their time and expertise helping me to complete this thesis in a scientifically approved manner.

I would like to acknowledge the support of the German Academic Exchange Service (DAAD) and the German government for providing financial support for the entire course. Besides I would like to thank our Course Director Prof. Karl Hans Zessin and our Course Coordinator Dr. Maximillian Baumann, Assoc. Prof. Dr. Lertrak Srikitjakarn (Dean, FVM) and the Director of VPH-CAP Ass. Prof. Dr. Khwanchai Kreausukon for their kind cooperation and support and for their invaluable attitude for smooth running during the two entire years of this joint master degree course of FUB and CMU. I would like to extend my gratitude to my advisor Dr. To Lien Thu (Chief of the microbiological laboratory) for helping me to facilitate the field and laboratory work in Vietnam and for her continuous guidance. The staff of the laboratory of the National Center for Veterinary Hygiene Inspection of the Department of Animal Health is greatly thanked for their technical and logistical support and the Ministry of Agriculture and Rural Development (MARD) for providing leave to conduct this course.

I would also like to thank Ass. Prof. Dr. Pawin Padungtod for his enormous help in finalizing the data processing. The support of Ms. Rose Schmitz and the formidable help of Prof. Dr. Reinhard Fries in boosting scientific ideas and the methodology are also highly appreciated. None the less, I appreciate the support rendered by Ms Nancy Huber for English edition, Dr. Miethe for guiding in data processing, and help extended by Ms Juliane and Ms Le Bel during my stay in Berlin.

The staff of the Laboratory of the National Center for Veterinary Hygiene Inspection of the Department of Animal Health in Vietnam and my colleagues is greatly acknowledged for creating a warm, friendly and supportive atmosphere which helped me to finish this thesis, fruitfully. Since the survey data collection from the sub-urban areas is a major task for any researcher the unforgettable help from the officers of the district veterinary stations is highly appreciated. Their help makes this thesis blooming.

I would also like to thank the pork retailers who have permitted meat sample collections from their barns and the producers for taking time to answer the questionnaire, for their co-operation and enthusiasm. Their verbal replies helped me to assess the risk, in a scientifically sound way, of the examined bacterium in meat. All the Master degree students and the staff of the Veterinary Public Health Center for Asia Pacific (VPHCAP), the International Postgraduate Institute of Animal Health (FUB) and the University of Veterinary Medicine (Austria) have been enthusiastic, loyal and supportive of one another. I thank all of them, deeply, for their assistance at various times.

Finally, I dedicate my deep love and gratitude to my family for their moral support, their encouragement and above all their patience and understanding for me being away from them throughout my study period.
