ACKNOWLEDGEMENTS

First and foremost I would like to thank the Post Graduate Studies in International Animal Health (FUB), the Veterinary Public Health Center for Asia Pacific (CMU) and my home institution the Himalayan College of Agricultural Sciences and Technology (PU) for providing all the academic, intellectual and logistic support for carrying out this study. I would also like to gratefully dedicate my appreciation to the Royal Thai Government for providing me with the scholarship for pursuing the master in the veterinary public health degree program.

My exceptionally thanks goes to my academic advisors, Prof. Dr. Dr. h.c. Franz Hörchner and Assoc. Prof. Dr. Lertrak Srikitjakarn who have provided me with excellent support and advice over these two years. I really appreciate their willingness to go through my work and to help me understand my thesis topic and the many factors involved with the producing and writing of a quality piece of research. Especially, the word “Controlling the Good” mentioned with warm cordiality by the honorable Prof. Hörchner to uplift my laboratory skill is a memorable event of this academic work.

I would like to extend my sincere thanks to Prof. Dr. Karl Hans Zessin (the course director), Dr. Maximillian Baumann (the course coordinator) and Prof. Dr. Reinhard Fries for introducing me to the fascinating subject of *Trichinella* epidemiology when I was looking for a topic for my research studies, as well as for being supportive and for providing sound advices up to its final version. Many thanks also to the academics of CMU, Asst. Prof. Dr. Pawin Padungtod, Assoc. Prof. Dr. Nimit Morakote for being the official reviewers of my thesis, for their constructive criticism and their suggestions that greatly improved the text.

I extend my gratitude to Dr. K. Nöckler (BfR, Berlin) for providing the diagnostic photographs of *Trichinella* spp. and some logistic support to confirm the sera by ELISA and western blot via Prof. Hörchner. Besides I dedicate my profound gratitude to my Nepalese supervisor Dr. Rewati Man Shrestha, the chief of Central Veterinary Laboratory, for facilitating the field and laboratory work in Nepal.

The academic and administrative staffs of FU, CMU and UVMA-Vienna that have been involved with my master course are also appreciated for their great effort to make me capable to conduct my research work, independently and scientifically. I would also like to include a special dedication to the authors I have read in the context of this study who have provided me with scientific papers of very high quality which consequentially helped me to present this study.

I extend my warmest thanks to my colleagues at these institutes and all others who contributed in one way or another. This has been a very interesting and educative project for me, and many of you have become my memorable friends. Special splendid thanks to you, Dr. Khin Khin Lay for the pleasant cooperation and understanding which helped me to finish this study in time.

Last but not least I would like to mention my parents, my elder brothers and my sisters in law, who have helped and encouraged me since my childhood to become a perfect man. I thank them for their invaluable support that helped me to become an academician to lead the country in a fruitful way.

Santosh Kumar Karn
