ABSTRACT (THAI)	vii
TABLE OF CONTENTS	x
LIST OF TABLES	xvii
LIST OF FIGURES	xxi
ABBREVIATIONS AND SYMBOLS	xxv
CHAPTER I: INTRODUCTION	
1.1 Flow Injection Analysis (FIA)	1
1.1.1 Principle of FIA	2
1.1.2 Dispersion	3
1.1.3 FIA Instrumentation	7
1.2 Reverse Flow Injection Analysis (rFIA)	10
1.3 Sequential Injection Analysis (SIA)	10
1.3.1 Programmable Flow of SIA	11
1.3.2 Sequential Injection Analyzer	13
1.3.3 SIA Dispersion Zones	16

	Page
1.3.4 Mixing and Zone Overlap of SIA	19
1.4 Aluminum	20
1.4.1 Occurrence and Significance	20
1.4.2 Application of Aluminum	20
1.4.3 Hazard Evaluation and Limiting Concentration	21
1.4.4 Determination of Aluminum	21
1.5 Bromopyrogallol Red	25
1.6 Research Aims	28
 CHAPTER II: EXPERIMENTAL	
2.1 Instruments and Apparatus	29
2.2 Chemicals	29
2.3 Preparation of Standard Solutions and Reagents	30
2.3.1 Preparation of Standard Solutions and Reagents of rFI system	30
2.3.1.1 Aluminum stock solution 1000 mg.L ⁻¹	30
2.3.1.2 Bromopyrogallol red stock solution 5x10 ⁻⁴ mol.l ⁻¹	31
2.3.1.3 Cetyltrimethylammonium bromide stock solution 0.25 mol L ⁻¹	31
2.3.1.4 0.02 mol L ⁻¹ of Acetate buffer pH 5.0	31

	Page
2.3.2 Preparation of standard solutions and reagents of SI system	31
2.3.2.1 Aluminum stock solution 1000 mg L ⁻¹	31
2.3.2.2 Bromopyrogallol red stock solution 5x10 ⁻⁴ mol L ⁻¹	32
2.3.2.3 Cetyltrimethylammonium bromide stock solution 0.25 mol L ⁻¹	32
2.3.2.4 0.25 mol L ⁻¹ of Acetate buffer pH 5.5	32
2.4 Preliminary Studies of Spectrophotometric Determination of Aluminum by Using Bromopyrogallol Red as Complexing Agent	33
2.4.1 Absorption spectra	33
2.4.2 Study of the composition of the Al-BPR-CTAB complex by Mole- ratio method	33
2.5 Procedure	34
2.5.1 Procedure for collection and treating tap water samples for aluminum determination	34
2.5.2 rFIA spectrophotometric determination of aluminum using BPR and CTAB as complexing agent	34
2.5.2.1 Optimization of the reverse flow system	36
2.5.2.2 Linearity of calibration graph	37
2.5.2.3 Precision	38

	Page
2.5.2.4 Detection limit	38
2.5.2.5 Accuracy of the proposed method	39
2.5.2.6 Interference studies	39
2.5.2.7 Validation method	40
2.5.3 SIA spectrophotometric determination of aluminum using BPR and CTAB as complexing agent	41
2.5.3.1 Sequential injection method	42
2.5.3.2 Optimization of the sequential injection system	47
2.5.3.3 Linearity of calibration graph	48
2.5.3.4 Precision	49
2.5.3.5 Detection limit	49
2.5.3.6 Accuracy of the proposed method	49
2.5.3.7 Interference studies	49
2.5.3.8 Validation method	50
 CHAPTER III : RESULTS AND DISCUSSION	
3.1 Preliminary Studies of Spectrophotometric Determination of Aluminum by Using Bromopyrogallol Red as Complexing Agent	51
3.1.1 Absorption spectra	51

	Page
3.1.2 Mole-ratio method	52
3.2 rFIA Spectrophotometric Determination of Aluminum Using Bromopyrogallol Red and Cetyltrimethyl Ammonium Bromide as A Complexing Agent	55
3.2.1 Optimization of The Reverse Flow System by Univariate Method	55
3.2.1.1 Optimum wavelength	56
3.2.1.2 Effect of pH	58
3.2.1.3 Effect of BPR concentration	59
3.2.1.4 Effect of % ethanol in BPR solution	61
3.2.1.5 Effect of CTAB concentration	62
3.2.1.6 Effect of flow rate	64
3.2.1.7 Effect of reaction coil (I) length	65
3.2.1.8 Effect of reaction coil (II) length	67
3.2.1.9 Effect of reagent volume	68
3.2.2 Analytical Characteristics of the method	70
3.2.2.1 Linear range	70
3.2.2.2 Precision of the flow injection system	72
3.2.2.3 Calibration curve	73
3.2.2.4 Detection limit	76

	Page
3.2.2.5 Interference Studies	78
3.2.2.6 Effect of masking agents and interference	83
3.2.2.7 Determination of aluminum in waters	85
3.3 SIA Spectrophotometric Determination of Aluminum Using Bromopyrogallol Red and Cetyltrimethyl Ammonium Bromide as A Complexing Agent	87
3.3.1 Study aspiration order	87
3.3.2 Optimization of the sequential injection system by univariate method	88
3.3.2.1 Effect of pH	88
3.3.2.2 Effect of pH concentration	90
3.3.2.3 Effect of BPR concentration	91
3.3.2.4 Effect of % ethanol in BPR solution	93
3.3.2.5 Effect of CTAB concentration	94
3.3.2.6 Effect of aspiration volumes of acetate buffer	95
3.3.2.7 Effect of aspiration volumes of BPR	97
3.3.2.8 Effect of aspiration volumes of CTAB	98
3.3.2.9 Effect of aspiration volumes of sample	100
3.3.2.10 Effect of flow rate	101

	Page
3.3.2.11 Effect of holding time	102
3.3.3 Analytical Characteristics of the method	104
3.3.3.1 Linear range	104
3.3.3.2 Precision of the flow injection system	106
3.3.3.3 Calibration curve	107
3.3.3.4 Detection limit	110
3.3.3.5 Interference Studies	112
3.3.3.6 Effect of masking agents and interference	117
3.3.3.7 Determination of aluminum in waters	119
CHAPTER IV: CONCLUSIONS	121
REFERENCES	124
APPENDIX A	128
APPENDIX B	132
CURRICULUM VITAE	138
THE RELEVANCY OF THE RESEARCH WORK IN THAILAND	141

LIST OF TABLES

Table	Page
1.1 A brief review of the methods for the determination of aluminum	22
1.2 A brief review of FIA and SIA for the determination of aluminum	24
1.3 A brief review of BPR reagent for the determination of some metals	25
2.1 The studied range for the optimization of all parameters of rFIA	36
2.2 Preliminary experimental conditions of rFIA for studying optimum wavelength of Al-BPR-CTAB	37
2.3 Experimental protocol as shown in the FIALab for windows software	44
2.4 The studied range for the optimization of all parameters of SIA	47
2.5 Preliminary experimental conditions of SIA for studying optimum pH of Al-BPR-CTAB	48
3.1 Effect of BPR concentrations for mole-ratio of Al-BPR-CTAB complex	52
3.2 Effect of CTAB concentrations for mole-ratio of Al-BPR-CTAB complex	54
3.3 Peak height at various wavelengths	57
3.4 Effect of pH on the sensitivity	58
3.5 Effect of concentration of BPR on the sensitivity	60
3.6 Effect of concentration of ethanol on the sensitivity	61
3.7 Effect of concentration of CTAB on the sensitivity	63
3.8 Effect of flow rate on the sensitivity	64

Table	Page
3.9 Effect of length of reaction coil (I) length on the sensitivity	66
3.10 Effect of length of reaction coil (II) length on the sensitivity	67
3.11 Effect of reagent volume on the sensitivity	69
3.12 Optimum conditions for aluminum determination	70
3.13 Linearity of aluminum determination	71
3.14 Precision verification using standard 0.1 mg L ⁻¹ aluminum	73
3.15 Δ Peak height for calibration curve	74
3.16 Calculation of detection limit of rFIA spectrophotometric determination of aluminum 0.05-0.11 mg L ⁻¹	76
3.17 Calculation of detection limit of rFIA spectrophotometric determination of aluminum 0.15-0.40 mg L ⁻¹	77
3.18 Interference studies for 0.20 mg L ⁻¹ standard aluminum by rFIA method	79
3.19 Summary of interference effects of some ions on the response obtained from aluminum 0.2 mg L ⁻¹	82
3.20 Effect of masking agent for mask Fe ²⁺ , Fe ³⁺ and Cu ²⁺ the response obtained from aluminum 0.2 mg L ⁻¹	83
3.21 Determination of aluminum in water sample by rFIA method	85
3.22 Comparative determination of aluminum in water sample by proposed rFIA method and ICP-OES	86

Table	Page
3.23 Sensitivity at various aspiration orders	88
3.24 Effect of pH on the sensitivity	89
3.25 Effect of concentration of acetate buffer pH 5.0 on the sensitivity	90
3.26 Effect of various concentration of BPR on the sensitivity	92
3.27 Effect of various concentration of ethanol on the sensitivity	93
3.28 Effect of various concentration of CTAB on the sensitivity	94
3.29 Effect of various aspiration volume of 0.25 mol L^{-1} of acetate buffer pH 5.5 on the sensitivity	96
3.30 Effect of various aspiration volumes of $1.40 \times 10^{-4} \text{ L}$ of BPR in ethanol 10% on the sensitivity	97
3.31 Effect of various aspiration volume of $5.0 \times 10^{-3} \text{ mol L}^{-1}$ of CTAB on the sensitivity	99
3.32 Effect of various aspiration volume of sample on the sensitivity	100
3.33 Effect of various flow rate on the sensitivity	101
3.34 Effect of various holding time on the sensitivity	103
3.35 Optimum conditions for aluminum determination	104
3.36 Linearity of aluminum determination	105
3.37 Precision verification using various concentrations of aluminum standard	107
3.38 Δ Peak height for calibration curve	108

Table	Page
3.39 Calculation of detection limit of SIA spectrophotometric determination of aluminum 0.02-0.30 mg L ⁻¹	110
3.40 Calculation of detection limit of SIA spectrophotometric determination of aluminum 0.30-1.00 mg L ⁻¹	111
3.41 Interference studies for 0.20 mg L ⁻¹ standard aluminum by SIA method	113
3.42 Summary of interference effects of some ions on the response obtained from aluminum 0.2 mg L ⁻¹ by SIA method	116
3.43 Effect of masking agent for mask Fe ²⁺ , Fe ³⁺ and Cu ²⁺ the response obtained from aluminum 0.2 mg L ⁻¹ by SIA method	117
3.44 Determination of aluminum in water sample by SIA method	119
3.45 Comparative determination of aluminum in water sample by proposed SIA method and ICP-OES	120

LIST OF FIGURES

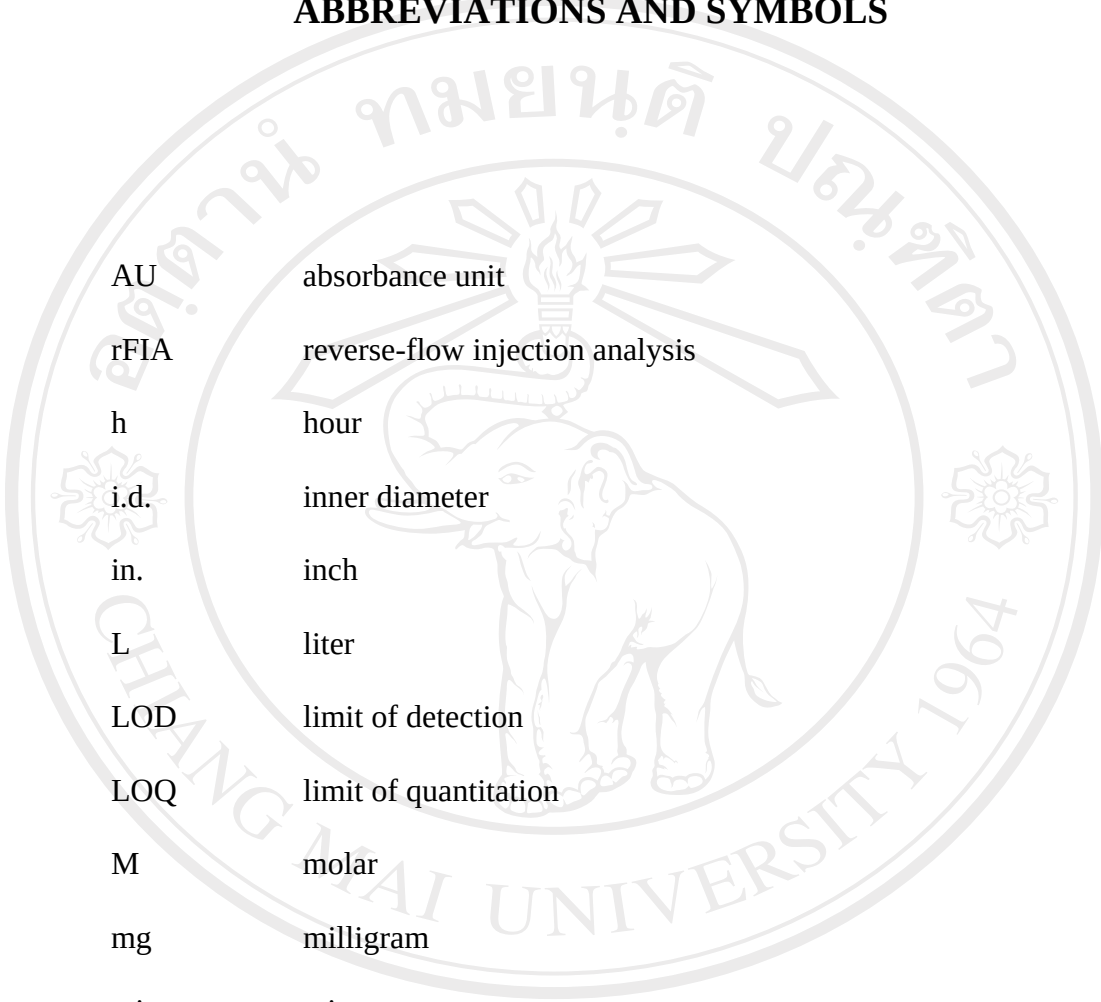

Figure		Page
1.1	Stages of development and classification of automated solution analysis	1
1.2	The basic components of FIA system	3
1.3	General types of transport in closed tubes and the recorded profiles at the detector.	4
1.4	Effect of convection and diffusion on concentration profile of analyses at the detector	5
1.5	Dispersed sample zone in flow system	5
1.6	Relationship between the rollers of a peristaltic pump and the pump tubes	8
1.7	Sequence zone of SIA systems	11
1.8	Structure of injected zones and concentration profiles as seen by the detector	12
1.9	Schematic flow diagram of a sequential injection analyzer	14
1.10	Dispersed sample zones of SIA system	17
1.11	Forward and reversal flow of SIA system	19
1.12	The structure of bromopyrogallol red	25
2.1	reverse flow injection system for the determination of aluminum	35
2.2	SI manifold for the determination of aluminum in water samples	42

Figure	Page
2.3 The SIA system for determination of aluminum	42
2.4 Senec SIA software for plot the SIA grams	43
2.5 FIALab 5.0 for windows software	43
3.1 Absorption Spectra of BPR, BPR-CTAB and Al-BPR-CTAB complex against water at pH 5.0	51
3.2 Mole-ratio study of Al-BPR-CTAB system; effect of BPR concentration.	53
3.3 Mole-ratio study of Al-BPR-CTAB system; effect of CTAB concentration.	54
3.4 Δ Peak height at various wavelengths	57
3.5 Relationship between pH and sensitivity of the calibration curve	59
3.6 Relationship between concentration of BPR and sensitivity of the calibration curve	60
3.7 Relationship between concentration of ethanol in BPR solution and sensitivity of the calibration curve	62
3.8 Relationship between concentration of CTAB and and sensitivity of the calibration curve	63
3.9 Relationship between flow rate and and sensitivity of the calibration curve	65

Figure	Page
3.10 Relationship between reaction coil (I) length and sensitivity of the calibration curve	66
3.11 Relationship between reaction coil (II) length and sensitivity of the calibration curve	68
3.12 Relationship between reagent volume and sensitivity of the calibration curve	69
3.13 Relationship between Δ peak height and concentration of aluminum	72
3.14 Calibration signal of rFIA spectrophotometric determination of aluminum 0.05-0.11 mg L ⁻¹ and 0.15-0.40 mg L ⁻¹	75
3.15 The Calibration curve of rFIA spectrophotometric determination of aluminum	75
3.16 Relationship between various pH and sensitivity of the calibration curve	89
3.17 Relationship between various concentration of acetate buffer pH 5.5 and sensitivity of the calibration curve	91
3.18 Relationship between various concentration of BPR in 50 % ethanol solution and sensitivity of the calibration curve	92
3.19 Relationship between various concentration of ethanol on the sensitivity of the calibration curve	93

Figure		Page
3.20	Relationship between concentration of CTAB on the sensitivity of the calibration curve	95
3.21	Relationship between various aspiration volume of 0.25 mol L ⁻¹ of acetate buffer pH 5.5 on the sensitivity of the calibration curve	96
3.22	Relationship between various aspiration volumes of 1.40 x 10 ⁻⁴ L of BPR in ethanol 10% on the sensitivity of the calibration curve	98
3.23	Relationship between various aspiration volumes of 5 x 10 ⁻³ mol L ⁻¹ of CTAB on the sensitivity of the calibration curve	99
3.24	Relationship between various aspiration volumes of 5 x 10 ⁻³ mol L ⁻¹ of CTAB on the sensitivity of the calibration curve	100
3.25	Relationship between various flow rate on the sensitivity of the calibration curve	102
3.26	Relationship between various holding time on the sensitivity of the calibration curve	103
3.27	Relationship between Δ peak height and concentration of aluminum	106
3.28	Calibration signal of SIA spectrophotometric determination of aluminum 0.02-0.30 and 0.30-1.00 mg L ⁻¹	109
3.29	The Calibration curve of SIA spectrophotometric determination of aluminum: (a) aluminum 0.02-0.30 mg L ⁻¹ ; (b) aluminum 0.15-0.40 mg L ⁻¹	109

ABBREVIATIONS AND SYMBOLS

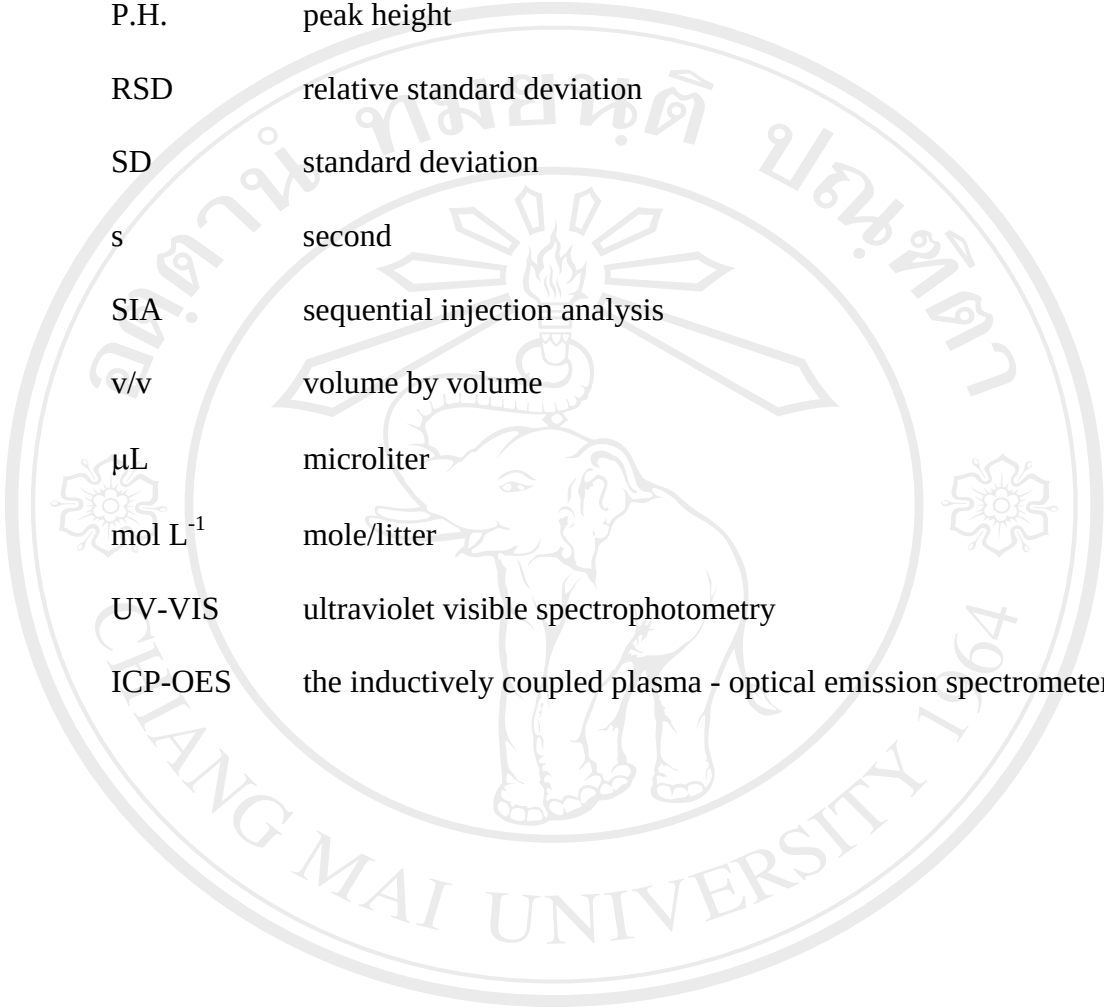

AU	absorbance unit
rFIA	reverse-flow injection analysis
h	hour
i.d.	inner diameter
in.	inch
L	liter
LOD	limit of detection
LOQ	limit of quantitation
M	molar
mg	milligram
min	minute
mL	milliliter
mm	millimeter
mV	millivolt
PC	personal computer
PTFE	polytetrafluoroethylene
$\bar{x}$	mean

ลิขสิทธิ์มหาวิทยาลัยเชียงใหม่

Copyright © by Chiang Mai University

P.H.	peak height
RSD	relative standard deviation
SD	standard deviation
s	second
SIA	sequential injection analysis
v/v	volume by volume
μL	microliter
mol L^{-1}	mole/litter
UV-VIS	ultraviolet visible spectrophotometry
ICP-OES	the inductively coupled plasma - optical emission spectrometer
