ACKNOWLEDGEMENTS

Many kind people have contributes to this thesis. First, heartfelt thanks go to all of the families who participated in this study and frankly bared their lives in the hope that how they cared for their child could be of benefit to others. I thank them for sharing their perceptions and intense experiences and helping me make sense of their world.

My warmest gratitude is extended to my dissertation advisory committee for the invaluable guidance and nurturance they provided at crucial moments during the last six years. Associate Professor Dr. Ratanawadee Chontawan, my dissertation chair, shared academic guidance, moral support, and generosity throughout the dissertation and helped me to be a good teacher and scholar. Assistant Professor Dr. Jarassri Yenbut and Associate Professor Dr. Lynne Ray, the co-advisors, mentored me in the qualitative research approach; her wealth of knowledge and expertise helped me to develop a proposal. Also, their dedication to children with chronic illness and her scholarly feedback on this dissertation were invaluable. Professor Duangmanee Laohaprasittiporn and Assistant Professor Suthep Wanitkun supported my data collection and my knowledge of pediatric cardiology. Assistant Professor Dr. Franca Boag of the Department of Anthropology, University of Alberta, contributed to my understanding of ethnography and anthropology.

Professor Dr. Wichit Srisuphan, a former dean of the Faculty of Nursing, Chiang Mai University, supported me throughout my doctoral program. Associate Professor Dr. Warunee Fongkaew and Associate Professor Dr. Chawapornpan Chanprasit served as graduate school representatives on my dissertation committee

and offered scholarly feedback on this dissertation. Associate Professor Dr. Areewan Klunklin, Dr. Hunsa Sethabuppha and Dr. Tiraporn Junda validated the interview guide and observation guide in this study. Mr. John Henderson of the Thailand MOPH - U.S. CDC Collaboration consistently encouraged me, and reviewed the words in my abstracts, presentations, and dissertation. Miss Saowanee Ekpanyachai and Mrs. Charunun Seutrong also offered kind edition.

The International Nursing Center at University of Alberta, Canada—and particularly Mrs. Karen Mills—extended a warm welcome, friendships, and support. Many members of the pediatric cardio units, and pediatric wards at Siriraj and Ramathibodi Hospitals gave me friendship and support during my study. The Royal Thai Government provided four-year scholarship support of my doctoral studies. The Graduate School, Chiang Mai University, and the Thailand Nursing Council also provided partial financial support of this dissertation. The Faculty of Nursing, Mahidol University, provided time for me to study in this program. All of my colleagues, classmates and friends offered consistent emotional support and friendship.

Finally, I would like to give my deepest thankfulness to my mother for giving me unconditional love and support throughout every step of my life. To my father, sisters, aunts and other relatives, thanks for teaching me the meaning of family, and for your love and support throughout my academic endeavors.
