ABSTRACT (THAI)	vii
TABLE OF CONTENTS	x
LIST OF TABLES	xvii
LIST OF FIGURES	xxi
ABBREVIATIONS AND SYMBOLS	xxv
 CHAPTER I INTRODUCTION	
1.1 Flow Injection Analysis (FIA)	1
1.1.1 Principle of FIA	2
1.1.2 Dispersion	3
1.1.3 FIA Instrumentation	7
1.2 Sequential Injection Analysis (SIA)	10
1.2.1 Programmable Flow of SIA	11
1.2.2 Sequential Injection Analyzer	12
1.2.3 SIA Dispersion Zones	16

	Page
1.2.4 Mixing and Zone Overlap of SIA	19
1.3 Selenium	20
1.3.1 History	20
1.3.2 Occurrence	20
1.3.3 Preparation	20
1.3.4 Physical properties	20
1.3.5 Chemical properties	21
1.3.6 Distribution to environment	21
1.3.7 Deficiency signs	22
1.3.8 Effect of excess selenium	23
1.3.9 Therapeutic uses	24
1.3.10 Uses	25
1.3.11 Determination of Selenium	27
1.4 Variamine Blue	29
1.5 Research Objectives	30
CHAPTER II EXPERIMENTAL	
2.1 Instruments and Apparatus	31
2.2 Chemicals	31

	Page
2.3 Preparation of Standard Solution and Reagents	33
2.3.1 Preparation of Standard Solutions and Reagents of FIA procedure	33
2.3.1.1 Selenium stock solution 1000 mg L ⁻¹	33
2.3.1.2 Variamine Blue stock solution 500 mg L ⁻¹	33
2.3.1.3 Potassium iodide stock solution 3.0 % (w/v)	33
2.3.1.4 Sodium acetate stock solution 0.4 mol L ⁻¹	34
2.3.1.5 Hydrochloric acid stock solution 0.2 mol L ⁻¹	34
2.3.2 Preparation of standard solutions and reagents of SIA procedure	34
2.3.2.1 Selenium stock solution 1000 mg L ⁻¹	34
2.3.2.2 Variamine Blue stock solution 100 mg L ⁻¹	34
2.3.2.3 Potassium iodide stock solution 2.0 % (w/v)	34
2.3.2.4 Sodium acetate stock solution 0.2 mol L ⁻¹	35
2.3.2.5 Hydrochloric acid stock solution 0.4 mol L ⁻¹	35
2.4 Procedure	35
2.4.1 Sample collection and pretreatments	35
2.4.2 FIA spectrophotometric determination of selenium using VB solution as complexing reagent	36
2.4.2.1 Optimization of the flow injection system	37
2.4.2.2 Linearity of calibration graph	39

	Page
2.4.2.3 Precision	40
2.4.2.4 Detection limit	40
2.4.2.5 Accuracy of the proposed method	41
2.4.2.6 Interference studies	41
2.4.2.7 Validation method	41
2.4.3 SIA spectrophotometric determination of selenium using VB solution as complexing agent	43
2.4.3.1 Sequential injection method	44
2.4.3.2 Optimization of the sequential injection system	49
2.4.3.3 Linearity of calibration graph	50
2.4.3.4 Precision	51
2.4.3.5 Detection limit	51
2.4.3.6 Accuracy of the proposed method	51
2.4.3.7 Interference studies	51
2.4.3.8 Validation method	52
 CHAPTER III RESULTS AND DISCUSSION	
3.1 Preliminary Studies of Spectrophotometric Determination of Selenium by Using Variamine Blue as Complexing Agent	53

	Page
3.1.1 Absorption spectra	53
3.1.2 Chemical reaction	54
3.2 FIA Spectrophotometric Determination of Selenium Using Variamine Blue as Complexing Agent	54
3.2.1 Optimization of the Flow System by Univariate Method	54
3.2.1.1 Optimum wavelength	55
3.2.1.2 Effect of potassium iodide concentration	56
3.2.1.3 Effect of hydrochloric acid concentration	58
3.2.1.4 Effect of ethanol concentration in Variamine Blue solution	59
3.2.1.5 Effect of Variamine Blue concentration	61
3.2.1.6 Effect of sodium acetate concentration	62
3.2.1.7 Effect of flow rate	64
3.2.1.8 Effect of reaction coil (I) length	66
3.2.1.9 Effect of reaction coil (II) length	67
3.2.1.10 Effect of sample injection volume	69
3.2.2 Analytical Characteristics of the method	71
3.2.2.1 Linear range	71
3.2.2.2 Precision of the flow injection system	73

	page
3.2.2.3 Calibration curve	75
3.2.2.4 Detection limit	77
3.2.2.5 Interference studies	78
3.2.2.6 Effect of masking agents and interference	84
3.2.2.7 Determination of selenium in waters	87
3.3 SIA Spectrophotometric Determination of Selenium Using Variamine Blue as Complexing Agent	89
3.3.1 Study aspiration order	89
3.3.2 Optimization of the sequential injection system by univariate method	90
3.3.2.1 Effect of potassium iodide concentration	91
3.3.2.2 Effect of hydrochloric acid concentration	92
3.3.2.3 Effect of ethanol concentration in Variamine Blue solution	94
3.3.2.4 Effect of Variamine Blue concentration	95
3.3.2.5 Effect of sodium acetate concentration	97
3.3.2.6 Effect of aspiration volumes of KI	98
3.3.2.7 Effect of aspiration volumes of HCl	100
3.3.2.8 Effect of aspiration volumes of VB	101

	Page
3.3.2.9 Effect of aspiration volumes of sample	103
3.3.2.10 Effect of flow rate	104
3.3.2.11 Effect of holding time	106
3.3.3 Analytical Characteristics of the method	108
3.3.3.1 Linear range	108
3.3.3.2 Precision of the sequentail injection system	110
3.3.3.3 Calibration curve	111
3.3.3.4 Detection limit	114
3.3.3.5 Interference studies	115
3.3.3.6 Effect of masking agents and interference	121
3.3.3.7 Determination of selenium in waters	124
CHAPTER IV CONCLUSIONS	126
REFERENCES	129
THE RELEVANCY OF THE RESEARCH WORK IN THAILAND	134
APPENDIX A	136
APPENDIX B	141
CURRICULUM VITAE	147

LIST OF TABLES

Table	Page
1.1 A brief review of FIA and SIA for the determination of selenium	28
2.1 The studied range for the optimization of experimental parameters	38
2.2 Preliminary experimental conditions of FIA for studying optimum wavelength of Se(IV) with VB	39
2.3 Experimental protocol as shown in the FIALab for windows software	46
2.4 The studied range for the optimization of experimental parameters	49
2.5 Preliminary experimental conditions of SIA for studying optimum concentration of VB	50
3.1 Peak height at various wavelengths	55
3.2 Effect of KI concentrations on the sensitivity	57
3.3 Effect of HCl concentrations on the sensitivity	58
3.4 Effect of concentrations of ethanol on the sensitivity	60
3.5 Effect of concentrations of Variamine Blue on the sensitivity	61
3.6 Effect of concentrations of CH ₃ COONa on the sensitivity	63
3.7 Effect of flow rates on the sensitivity	65
3.8 Effect of reaction coil (I) lengths on the sensitivity	66

Table	Page
3.9 Effect of reaction coil (II) lengths on the sensitivity	68
3.10 Effect of sample injection volumes on the sensitivity	69
3.11 Optimum conditions for selenium determination	71
3.12 Linearity of selenium determination	72
3.13 Precision verification using standard 0.20 mg L ⁻¹ selenium standard solution	74
3.14 ΔPeak height for calibration curve	75
3.15 Interference studies for 1.00 mg L ⁻¹ selenium standard solution by FIA method	79
3.16 Summary of interference effects of some ions on the response obtained from selenium 1.00 mg L ⁻¹	83
3.17 Effect of masking agent for mask Fe ²⁺ , Fe ³⁺ , Cu ²⁺ and NO ₂ ⁻ on the response obtained from selenium 1.00 mg L ⁻¹	84
3.18 Determination of selenium in water samples by FIA method	87
3.19 Comparative determination of selenium in water samples by proposed FIA method and ICP-MS	88
3.20 Sensitivity at various aspiration orders	90
3.21 Effect of various concentrations of KI on the sensitivity	91
3.22 Effect of various concentrations of HCl on the sensitivity	93

Table	Page
3.23 Effect of various concentrations of ethanol on the sensitivity	94
3.24 Effect of various concentrations of VB in 30% ethanol on the sensitivity	96
3.25 Effect of various concentrations of CH_3COONa on the sensitivity	97
3.26 Effect of various aspiration volumes of 2.0 % (w/v) of KI on the sensitivity	99
3.27 Effect of various aspiration volumes of 0.4 mol L^{-1} of HCl on the sensitivity	100
3.28 Effect of various aspiration volumes of 100 mg L^{-1} of VB in 30 % ethanol on the sensitivity	102
3.29 Effect of various aspiration volumes of sample on the sensitivity	103
3.30 Effect of various flow rates on the sensitivity	105
3.31 Effect of various holding times on the sensitivity	106
3.32 Optimum conditions for selenium determination	108
3.33 Linearity of selenium determination	109
3.34 Precision verification using various concentrations of selenium standard	111
3.35 Δ Peak height for calibration curve	112
3.36 Interference studies for 1.00 mg L^{-1} selenium standard solution by SIA method	116
3.37 Summary of interference effects of some ions on the response obtained from selenium 1.00 mg L^{-1} by SIA method	120

Table	Page
3.38 Effect of masking agent for mask Fe^{2+} , Fe^{3+} Cu^{2+} and NO_2^- the response obtained from selenium 1.00 mg L^{-1}	121
3.39 Determination of selenium in water samples by SIA method	124
3.40 Comparative determination of selenium in water samples by proposed SIA method and ICP-MS	125
4.1 Comparison between FIA and SIA procedure for selenium determination	128

LIST OF FIGURES

Figure		Page
1.1	Stages of development and classification of automated solution analysis	1
1.2	The basic components of FIA system	3
1.3	General types of transport in closed tubes and the recorded profiles at the detector	4
1.4	Effect of convection and diffusion on concentration profile of analyses at the detector	5
1.5	Dispersed sample zone in flow system	5
1.6	Relationship between the rollers of a peristaltic pump and the pump tubes	8
1.7	Sequence zone of SIA systems	11
1.8	Structure of injected zones and concentration profiles as seen by the detector	12
1.9	Schematic flow diagram of a sequential injection analyzer	14
1.10	Dispersed sample zones of SIA system	16
1.11	Forward and reversal flow of SIA system	19
1.12	The chemical structure of Variamine Blue	29
2.1	Flow injection system for the determination of selenium	37
2.2	SIA manifold for the determination of selenium in water samples	44

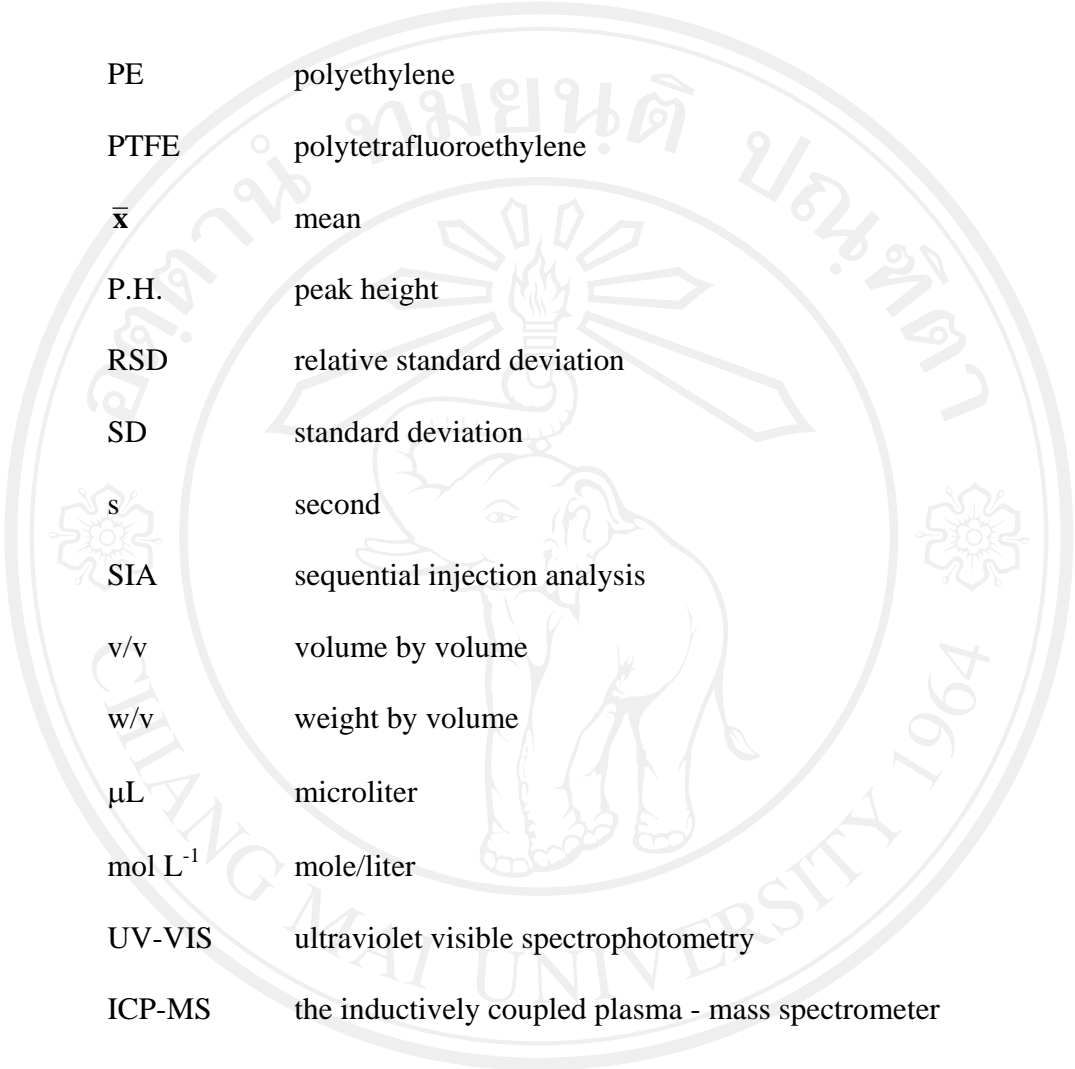

Figure	Page
2.3 The SIA system for determination of selenium	44
2.4 The SIAGrams obtained by mean of the developed software	45
2.5 FIALab 5.0 for windows software	45
3.1 Absorption Spectra of VB, Se(IV)-HCl-KI and Se(IV)-HCl-KI-VB complexes against water	53
3.2 The reaction between Se(IV) and Variamine Blue	54
3.3 Δ Peak height at various wavelengths	56
3.4 Relationship between concentrations of KI and sensitivity for Se(IV) determination (0.01 – 0.90 mg L ⁻¹)	57
3.5 Relationship between concentrations of HCl and sensitivity for Se(IV) determination (0.01 – 0.90 mg L ⁻¹)	59
3.6 Relationship between concentrations of ethanol in VB solution and sensitivity for Se(IV) determination (0.01 – 0.90 mg L ⁻¹)	60
3.7 Relationship between concentrations of VB solution and sensitivity of the propose method	62
3.8 Relationship between concentrations of CH ₃ COONa and sensitivity of the propose method	64
3.9 Relationship between flow rates and sensitivity of the propose method	65

Figure	Page
3.10 Relationship between reaction coil (I) lengths and sensitivity of the propose method	67
3.11 Relationship between reaction coil (II) lengths and sensitivity of the propose method	68
3.12 Relationship between sample injection volumes and sensitivity of the propose method	70
3.13 Relationship between Δ peak height and concentration of selenium	73
3.14 Calibration signal of FIA spectrophotometric determination of selenium 0.05 – 2.50 mg L ⁻¹	76
3.15 The Calibration curve of FIA spectrophotometric determination of selenium 0.05 – 2.50 mg L ⁻¹	76
3.16 Relationship between various concentrations of KI and sensitivity of the SIA method	92
3.17 Relationship between various concentrations of HCl and sensitivity of the SIA method	93
3.18 Relationship between various concentrations of ethanol in VB solution and sensitivity of the SIA method	95
3.19 Relationship between various concentrations of VB in 30% ethanol solution and sensitivity of the SIA method	96

Figure	Page
3.20 Relationship between concentrations of CH_3COONa on the sensitivity of the SIA method	98
3.21 Relationship between various aspiration volumes of 2.0 % (w/v) of KI on the sensitivity of the SIA method	99
3.22 Relationship between various aspiration volumes of 0.40 mol L^{-1} of HCl on the sensitivity of the SIA method	101
3.23 Relationship between various aspiration volumes of 100 mg L^{-1} of VB in 30% ethanol on the sensitivity of the SIA method	102
3.24 Relationship between various aspiration volumes of sample on the sensitivity of the SIA method	104
3.25 Relationship between various flow rates on the sensitivity of the SIA method	105
3.26 Relationship between various holding times on the sensitivity of the SIA method	107
3.27 Relationship between $\Delta\text{peak height}$ and concentration of selenium	110
3.28 Calibration signal of SIA spectrophotometric determination of selenium $0.01 - 2.50 \text{ mg L}^{-1}$	113
3.29 The Calibration curve of SIA spectrophotometric determination of selenium $0.01 - 2.50 \text{ mg L}^{-1}$	113

ABBREVIATIONS AND SYMBOLS

AAS	atomic absorption spectroscopy
AFS	atomic fluorescence spectroscopy
AU	absorbance unit
FIA	flow injection analysis
HG	hybrid generation
h	hour
i.d.	inner diameter
in.	inch
L	liter
LOD	limit of detection
LOQ	limit of quantitation
M	molar
mg	milligram
min	minute
mL	milliliter
mm	millimeter
o.d.	outer diameter

The background of the page features a large, faint watermark of the Chiang Mai University seal. The seal is circular, with an elephant in the center, and Thai text around the top and bottom. The text at the bottom reads 'CHIANG MAI UNIVERSITY 1964'.

PE	polyethylene
PTFE	polytetrafluoroethylene
\bar{x}	mean
P.H.	peak height
RSD	relative standard deviation
SD	standard deviation
s	second
SIA	sequential injection analysis
v/v	volume by volume
w/v	weight by volume
μL	microliter
mol L^{-1}	mole/liter
UV-VIS	ultraviolet visible spectrophotometry
ICP-MS	the inductively coupled plasma - mass spectrometer
