ACKNOWLEDGEMENT

Firstly, I must appreciate my advisor, Dr. Somdet Srichairatanakool who really does deserve the greatest thanks since he has provided me incredible support, encouragement and instruction in both the research and writing this thesis. This thesis could not have accomplished without his understanding and kindly encouragement.

Special appreciations are extended to my co-advisors, Assist. Prof. Dr. Yuttana Munde for his guidance and knowledgeable comments through this study. I would like to thank Thailand Research Fund through Prof. Suthat Fucharoen (Senior Research Fellow) for a partial support of consumable chemicals and reagents.

This work was supported by the research grant funded by the Commission of Higher Education through Dr. Somdet Srichairatanakool, Ministry of Education and partially by Thailand Research Fund through a Senior Research Scholar Professor Suthat Fucharoen. presented in this thesis was carried out in the laboratory of Biochemistry Department, Faculty of Medicine, Chiang Mai University. I do express my gratitude to all staff of Biochemistry Department for teaching and giving me the opportunity to continue my study and develop my skills, and allowing me to do the research work and use departmental facilities. The special thanks to my friends at the Biochemistry Department for their kindly help, friendship and entertainment during my study. Finally, I thank my family for love and care understanding, kindly encouragement and support that inspired me to reach goal. Moreover, I will keep in mind for the love and care that were received from the various other people whom I did not mention here.

Thidarat Saewong
