ACKNOWLEDGMENTS

This thesis is finally completed with courtesy from Asst. Prof. Dr. Yongyut Laosiritaworn, Asst. Prof. Dr. Rattikorn Yimnirun and Assoc. Prof. Dr. Supon Ananta who devoted their valuable time for very useful comments, ideas, suggestions and guidance. Also, the author would like to show gratitude for Dr. Athipong Ngamjarurojana and Mr. Natthapong Wongdamnern who provide technical supports and data sharing which are very contributive to the research.

Great thanks also go to my family members for the greatest comforts and colleagues for their help.

Additionally, I would like to acknowledge the Thailand Center of Excellence in Physics (ThEP), Department of Physics and Materials Science, Faculty of Science and the Graduate School, Chiang Mai University for financial supports.

Finally, I highly hope that the results from this research would be contributive and beneficial to further study on ferroelectric behavior using Fourier transformation.

Should there be any mistakes in this book, responses and feedbacks are highly appreciated.
