TABLE OF CONTENTS

	Page
ACKNOWLEDGMENTS	iii
ABSTRACT (ENGLISH)	V
ABSTRACT (THAI)	vii
LIST OF TABLES	xi
LIST OF FIGURES	xii
ABBREVIATIONS	xiv
CHAPTER I INTRODUCTION	
1.1 Research objectives	4
1.2 Usefulness of the research (theoretical and/or applied)	5
1.3 Research scope	5
1.4 Research location	6
1.5 Research duration	6
CHAPTER II cDNA MICROARRAY	
2.1 History of microarray	7
2.2 Definition of microarray	8
2.3 Type of microarray	10
2.4 The procedure to analyze microarray data	11
2.4.1 Biological question	12
2.4.2 Experiment design	15
2.4.3 Microarray experiment	17
2.4.4 Pre-processing data	19

viii

2.4.4.1 Image analysis	20
2.4.4.2 Expression quantification	26
2.4.4.3 Normalization	34
2.4.5 Statistical analysis	38
CHAPTER III COLORECTAL CANCER	
3.1 Epidemiology	44
3.2 Biologic characteristics and pathology	45
3.3 Type of colorectal cancer	47
3.4 Cancer staging	48
CHAPTER IV METHOD TO IDENTIFY RECTAL CANCER GENES WIT	H
SIGNIFICANT DIFFERENTIAL EXPRESSION BY MICROARRAY	
ANALYSIS	
4.1 Introduction	52
4.2 Tissue sample	52
4.3 Gene expression study by cDNA microarray	54
4.4 Microarray data analysis	57
CHAPTER V RESULTS	
5.1 Data before pre-processing5.2 Data pre-processing	67 72
5.3 Gene differential expression	78
CHAPTER VI DISCUSSION AND CONCLUSION	
6.1 Discussion	82
6.2 Conclusion	91

LIST OF TABLES

Tal	ble	Page
2.1	Segmentation methods and examples of software implementation	25
3.1	TNM staging definition for colorectal cancer	50
4.1	Six patients of rectal cancer whose contain tumor of rectal in stage III	53
4.2	Some section of the output file of ScanArray Express Software	56
4.3	The layout of targets file for reading six arrays into R software	58
4.4	The information of ten genes in the top of Human OpArray.GAL	58
4.5	Eight spot types of microarray data	59
4.6	The targets frame of factorial design	62
4.7	Some sections of the information provided by PerkinElmer Inc in USA	64
4.8	Some information of GO database	66
5.1	Ten values of foreground and background intensities of red and green	69
	channels	
5.2	Ten values of red and green intensities after normexp background correction	72
5.3	M and A values of normalization method	74
5.4	Twelve genes differentially expressed less than p-value at 0.005, comparing	79
	normal and cancer cells from the pooled data set	
6.1	The statistical values of six difference background methods	83
6.2	The statistical values of three difference within-array methods	85
B.1	: Two hundred and fifty-six genes differentially expressed less than p-value at	114
0.0	05, comparing normal and cancer cells from the pooled data set	

LIST OF FIGURES

Figure	Page
2.1 Anatomy of DNA microarray	9
2.2 Target and probe	9
2.3 The six steps of microarray analysis cycle	11
2.4 Bioinformatics concept	13
2.5 Central dogma	14
2.6 Commonly design of microarray	16
2.7 The procedure of microarray experiment	18
2.8 The ideal of image processing	21
2.9 Grid array patch on the array	22
2.10 Overview spots on microarray glass slide	23
2.11 Four segmentation method of image processing	24
2.12 The various intensity distribution of whole microarray spots	27
2.13 3D background correction	28
2.14 The concept of normexp background correction method	30
2.15 Adaptive background correction	32
2.16 Anatomy of box plot	33
2.17 The concept of MA-plot	34
2.18 Locally weight polynomial regression (Loess regression)	e ₃₇
2.19 MA-plot of before and after normalization by loess method	37
3.1 The diversity of cancer	44

3.2	The anatomy of colon and rectum				
3.3	3 Genetic progression of colorectal cancer				
3.4	4 Colorectal staging				
4.1	The reference design of thesis data 55				
5.1	1 The visualization of six raw microarray data 6				
5.2	MA-plot of six raw microarray data	71			
5.3	The visualization of M and A values	75			
5.4	The density plot of six raw microarray data	76			
5.5	The density plot of six normalization data	77			
6.1	.1 MA-plot of six difference background correction methods 84				
6.2	MA-plot of three difference within-array normalization method	85			
6.3	Density plot of three difference within-array normalization methods	86			
6.4	MA-plot and density plot of Aquantile between-array method	87

ABBREVIATIONS

AJCC	American Joint Committee On Cancer
TNM	T= primary tumor,
	N= lymph node,
	M= metastasis
WD	well-differentiated
PD	poorly differentiated
DNA	deoxyribonucleic acid
Limma	linear models for microarray data
RNA	ribonucleic acid
Lowess	locally weighted scatterplot smoothing
Aquantile	applying quantile normalization to the
	A-values
Cy5	red-fluorescing cyanine dyes
Cy3	green-fluorescing cyanine dyes
cDNA s	complementary DNA
mRNA	messenger RNA
SNP	Single Nucleotide Polymorphism
PCR	the polymerase chain reaction
aRNA	poly [A] RNA
normexp	normal-exponential convolution
	model

xiv

IQR	inter-quartile rang
CRC	colorectal cancer
APC	adenomatous polyposis coli.
НИРСС	hereditary nonpolyposis colorectal
	cancer
FAP	familial adenomatous polyposis
СТ	X-ray computed tomography
MRI	magnetic resonance imaging
1st Qu	first quartile
3rd Qu	third quartile
FDR	false discovery rate
