## APPENDIX A

### Calibration curve and calculations

#### A.1 Calibration of copper from calibration curve

In order to determine the calibration curve of Cu<sup>2+</sup> ion from copper nitrate solutions, the various concentrations of standard copper were prepared. The absorbance of Cu<sup>2+</sup> ion from copper nitrate solutions was measured using atomic absorption spectrophotometer (AAS).

**Figure A1** Calibration curve of copper

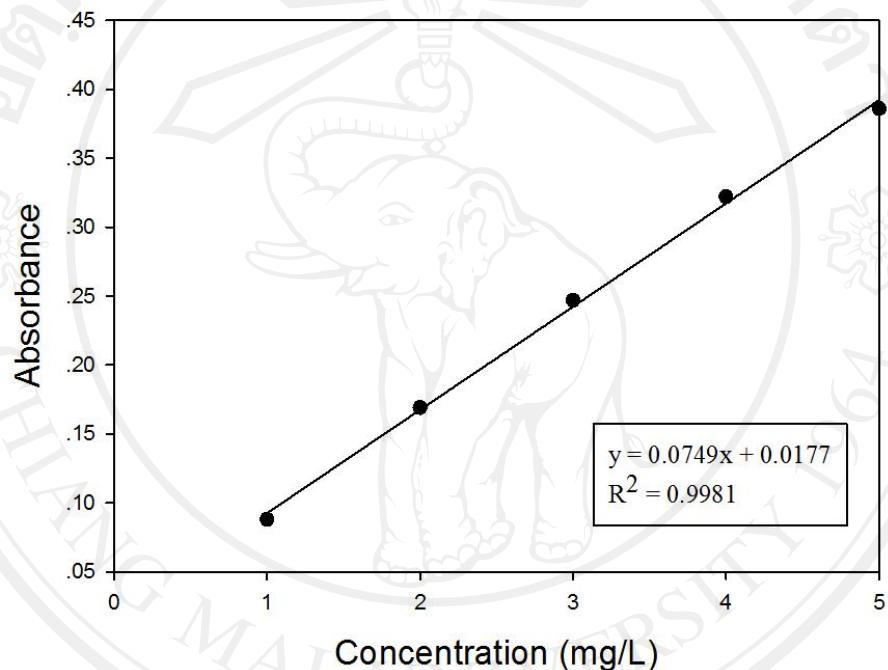

Equation of calibration curve:  $y = 0.0448x + 0.0070$

When  $y$  = absorbance (ABS) and  $x$  = copper concentration

$$x = \frac{ABS - 0.0070}{0.0448}$$

### A.2 Calibration of zinc from calibration curve

In order to determine the calibration curve of  $Zn^{2+}$  ion from zinc nitrate solutions, the various concentrations of standard zinc were prepared. The absorbance of  $Zn^{2+}$  ion from zinc nitrate solutions was measured using atomic absorption spectrophotometer (AAS).

**Figure A2** Calibration curve of zinc

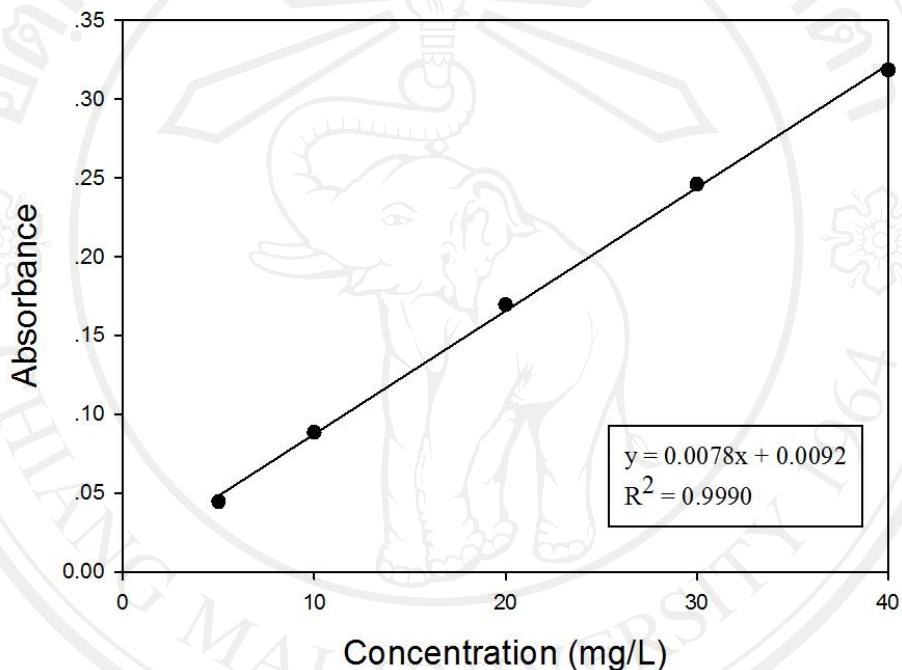

Equation of calibration curve:  $y = 0.0749x + 0.0177$

When  $y$  = absorbance (ABS) and  $x$  = zinc concentration

$$x = \frac{ABS - 0.0177}{0.0749}$$

### A.3 Calibration of lead from calibration curve

In order to determine the calibration curve of  $\text{Pb}^{2+}$  ion from lead nitrate solutions, the various concentrations of standard lead were prepared. The absorbance of  $\text{Pb}^{2+}$  ion from lead nitrate solutions was measured using atomic absorption spectrophotometer (AAS).

**Figure A3** Calibration curve of lead

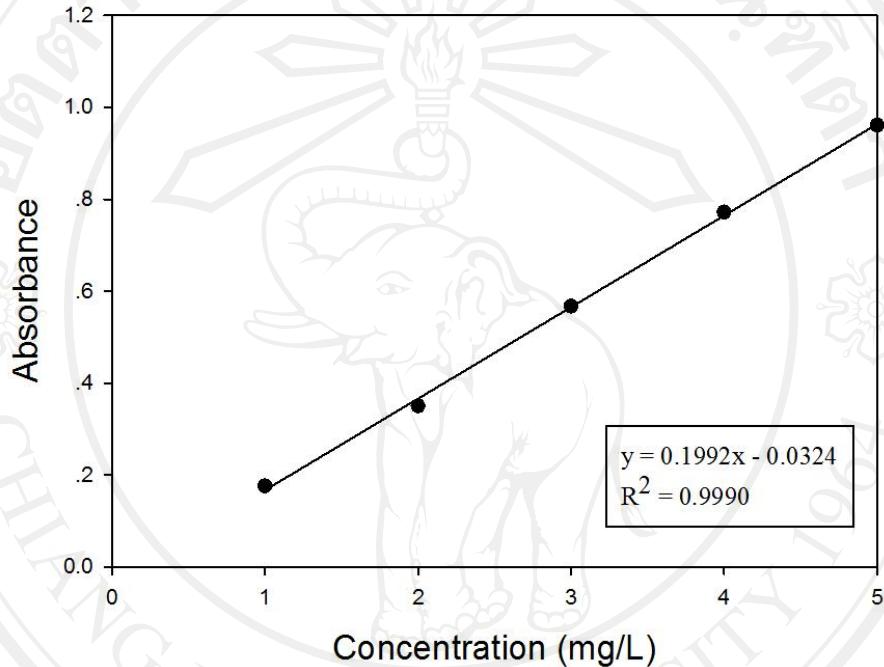

Equation of calibration curve:  $y = 0.0078x + 0.0092$

When  $y$  = absorbance (ABS) and  $x$  = lead concentration

$$x = \frac{ABS - 0.0092}{0.0078}$$

#### A.4 Calibration of methylene blue from calibration curve

In order to determine the calibration curve of methylene blue, the various concentrations of standard methylene blue were prepared. The absorbance of methylene blue solutions were measured using UV-Vis spectrophotometer at 644 nm.

**Figure A4** Calibration curve of methylene blue

Equation of calibration curve:  $y = 0.1992x - 0.0324$

When  $y$  = absorbance (ABS) and  $x$  = lead concentration

$$x = \frac{ABS + 0.0324}{0.1992}$$

### A.5 Calculation of the amount of adsorbed metal ion and the percentage of metal ions removal

The amount of adsorbed metal ion per gram of adsorbent was obtained using the following equation:

$$q_e = \frac{(C_i - C_e)}{M} V$$

The percentage of metal ion removal by adsorbent was calculated using the equation:

$$\% Removal = \frac{(C_i - C_e)}{C_i} \times 100$$

$q_e$  = the amount of metal ion adsorbed per gram of adsorbent (mg/g)

$C_i$  = the initial metal ion concentration of the solution (mg/L)

$C_e$  = the equilibrium metal ion concentration or final metal concentration of the solution (mg/L)

$V$  = volume of solution (L)

$M$  = the mass of adsorbent used (g)

#### For example:

The copper concentration was calculated from equation of calibration curve.

The initial copper concentration at pH 6 was 50.00 mg/L

The equilibrium copper concentration at pH 6 was 20.16 mg/L

The volume of solution was 0.0500 L

The mass of adsorbent used was 0.400 g

$$q_e = \frac{(50.00 - 20.16)}{0.400} \times 0.0500$$

$$= 3.73 \text{ mg/g}$$

The amount of adsorbed copper ions was 3.73 mg/g

$$\% Removal = \frac{(C_i - C_e)}{C_i} \times 100$$

$$= \frac{(50.00 - 20.16)}{50.00} \times 100$$

$$= 59.7\%$$

The percentage of copper ions removal was 59.7%

## APPENDIX B

### Adsorption of Cu(II) ions on leonardite

#### B.1 Effect of pH

The adsorption of copper on leonardite was studied at a pH range of 2-6, the initial copper concentrations 5.00 and 20.00 mg/L, in order to investigate the optimum pH for the removal of this ion. All experiments were performed in five experiments.

**Table B1** % Copper removal at pH 2-6 and the initial concentration of 5.00 mg/L

pH	%Cu <sup>2+</sup> Removal				
	1	2	3	4	5
2	43.9	47.0	47.2	45.0	45.7
3	87.6	87.2	88.2	86.3	87.4
4	96.5	96.8	96.4	94.2	94.8
5	98.6	99.1	98.6	98.7	98.4
6	99.3	99.1	99.3	99.6	99.3

**Table B2** % Copper removal at pH 2-6 and the initial concentration of 20.00 mg/L

pH	%Cu <sup>2+</sup> Removal				
	1	2	3	4	5
2	12.8	8.4	18.2	11.9	8.5
3	58.1	56.6	60.2	51.2	51.2
4	69.8	72.3	78.4	76.2	78.1
5	81.4	79.5	81.8	81.0	84.2
6	91.9	89.2	90.9	91.7	92.7

## B.2 Contact time

In order to study the effect of contact time on copper removal, the period of times were selected at 10, 20, 30, 40, 50, 60, 120, 180, 240, 300 and 360minutes, at 5.00 and 20.00 mg/L copper initial concentrations. All experiments were performed in five experiments.

**Table B3** The amount of Cu<sup>2+</sup> adsorbed vs. time at concentration of 5.00 mg/L

Time (min.)	The amount of Cu <sup>2+</sup> adsorbed (mg/g)				
	1	2	3	4	5

**Figure B1** Effect of leonardite quantity at leonardite dose starting from 0.200-3.00 g at the two concentrations of  $\text{Cu}^{2+}$

**Table B7** %Copper removal at leonardite dose 0.200-3.00 g, at the two concentrations

Leonardite Quantity (g)	%Cu <sup>2+</sup> Removal	
	Cu <sup>2+</sup> 5 mg/L	Cu <sup>2+</sup> 20 mg/L
0.200	86.8	82.9
0.400	93.2	89.4
0.700	93.9	91.3
1.00	94.8	92.5
3.00	96.8	94.5

#### B.4 Adsorption Isotherm

The adsorption capacity of adsorbent for copper was investigated over a range of copper concentrations. The experimental data for the uptake of  $\text{Cu}^{2+}$  ions by adsorbent over the studied concentration range were processed in accordance with the two of the most widely used adsorption isotherms: Langmuir and Freundlich isotherms.

#### First experiment

**Table B8** Langmuir parameters for  $\text{Cu}^{2+}$

Metal ions	Langmuir Isotherm					$R^2$
	$C_e$ (mg L <sup>-1</sup> )	$q_e$ (mg g <sup>-1</sup> )	$C_e/q_e$ (g L <sup>-1</sup> )	$q_{max}$ (mg g <sup>-1</sup> )	$K_L$ (g <sup>-1</sup> mg)

## APPENDIX C

### Adsorption of Zn(II) ions on leonardite

#### C.1 Effect of pH

The adsorption of zinc on leonardite was studied at a pH range of 2-6, the initial zinc concentrations of 5.00 and 20.00 mg/L, in order to investigate the optimum pH for the removal of this ion. All experiments were performed in five experiments.

**TableC1** % Zinc removal at pH 2-6 and the initial concentration of 5.00 mg/L

pH	%Zn <sup>2+</sup> Removal				
	1	2	3	4	5
2	5.7	9.1	6.9	5.2	6.8
3	11.9	14.2	12.6	11.1	13.0
4	22.7	21.6	20.5	19.7	20.6
5	29.3	29.9	29.9	28.5	29.6
6	43.6	43.4	41.7	45.1	43.7

**TableC2** % Zinc removal at pH 2-6 and the initial concentration of 20.00 mg/L

pH	%Removal

## APPENDIX D

### Adsorption of Pb(II) ions on leonardite

#### D.1 Effect of pH

The adsorption of lead on leonardite was studied at a pH range of 2-6, the initial lead concentrations 5.00 and 20.00 mg/L, in order to investigate the optimum pH for the removal of this ion. All experiments were performed in five experiments.

**Table D1** % Lead removal at pH 2-6 and the initial concentration of 5.00 mg/L

pH	%Pb <sup>2+</sup> Removal				
	1	2	3	4	5
2	84.7	83.8	85.1	81.8	81.6
3	99.8	99.8	99.8	99.8	99.8
4	99.8	99.8	99.8	99.8	99.8
5	99.8	99.8	99.8	99.8	99.8
6	99.8	99.8	99.8	99.8	99.8

**Table D2** % Lead removal at pH 2-6 and the initial concentration of 20.00 mg/L

pH	%Pb <sup>2+</sup> Removal				
	1	2	3	4	5
2	58.00	58.5	57.2	57.9	56.7
3	92.0	89.4	90.00	90.8	90.6
4	98.8	98.1	98.4	97.5	97.4
5	99.9	99.9	99.9	99.9	99.9
6	99.9	99.9	99.9	99.9	99.9

## D.2 Contact time

In order to study the effect of contact time on lead removal, the period of times were selected at 10, 20, 30, 40, 50, 60, 120, 180, 240, 300 and 360minutes, at 5.00 and 20.00 mg/L lead initial concentrations. All experiments were performed in five experiments.

**Table D3** The amount of Pb<sup>2+</sup> adsorbed vs. time at concentration of 5.00 mg/L

Time (min.)	The amount of Pb <sup>2+</sup> adsorbed (mg/g)				
	1	2	3	4	5
0	0	0	0	0	0
10	0.5209	0.5129	0.4969	0.5049	0.4969

### D.3 Effect of leonardite quantity

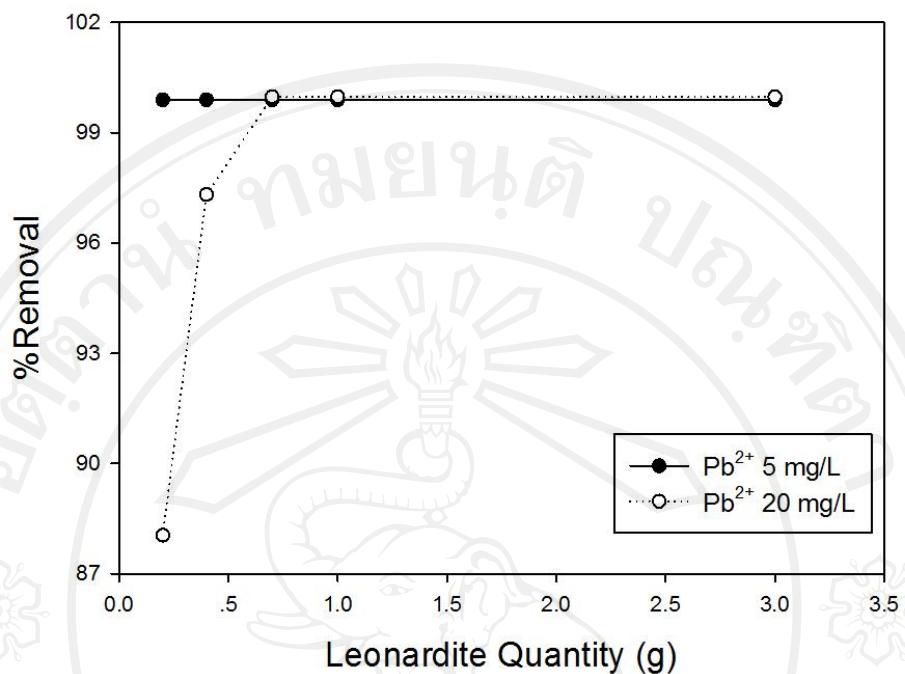

In order to investigate the effect of leonardite quantity, a series of adsorption experiment was carried out with different leonardite dosages at the initial metal concentration of 5.00 and 20.00 mg/L. All experiments were performed in five experiments.

**Table D5** %Lead removal at leonardite dose 0.400-3.00 g, at the initial concentration of 5.00 mg/L

Leonardite Quantity (g)	%Pb <sup>2+</sup> removal				
	1	2	3	4	5
0.400	99.8	99.8	99.8	99.8	99.8
0.700	99.8	99.8	99.8	99.8	99.8
1.00	99.8	99.8	99.8	99.8	99.8
3.00	99.8	99.8	99.8	99.8	99.8

**Table D6** %Lead removal at leonardite dose 0.400-3.00 g, at the initial concentration of 20.00 mg/L

Leonardite Quantity (g)	%Pb <sup>2+</sup> removal				
	1	2	3	4	5
0.400	99.1	99.2	99.2	99.2	99.2
0.700	99.9	99.9	99.9	99.9	99.9
1.00	99.9	99.9	99.9	99.9	99.9
3.00	99.9	99.9	99.9	99.9	99.9

**Figure D1** Effect of leonardite quantity at leonardite dose starting from 0.200-3.00 g  
at the two concentrations of  $\text{Pb}^{2+}$

**Table D7** %Lead removal at leonardite dose 0.200-3.00 g, at the two concentrations

Leonardite Quantity (g)	% $\text{Pb}^{2+}$ Removal	
	$\text{Pb}^{2+}$ 5 mg/L	$\text{Pb}^{2+}$ 20 mg/L
0.200	99.8	88.1
0.400	99.8	97.3
0.700	99.8	99.9
1.00	99.8	99.9
3.00	99.8	99.9

#### D.4 Adsorption Isotherm

The adsorption capacity of adsorbent for lead was investigated over a range of lead concentrations. The experimental data for the uptake of  $\text{Pb}^{2+}$  ions by adsorbent over the studied concentration range were processed in accordance with the two of the most widely used adsorption isotherms: Langmuir and Freundlich isotherms

#### First experiment

**Table D8** Langmuir parameters for  $\text{Pb}^{2+}$

## E.2 Effect of leonardite quantity

In order to investigate the effect of leonardite quantity, a series of adsorption experiment was carried out with different leonardite dosages at the initial methylene blue concentration of 60.00 and 110.0 mg/L. All experiments were performed in five experiments.

**Table E5** %Methylene blue removal at leonardite dose 0.200-3.00 g, at the initial concentration of 60.00 mg/L

Leonardite Quantity (g)	%Methylene blue removal				
	1	2	3	4	5
0.200	99.5	99.5	99.5	99.4	99.4
0.400	99.7	99.7	99.6	99.6	99.6
0.700	99.7	99.7	99.7	99.6	99.6
1.00	99.7	99.7	99.7	99.7	99.7
3.00	99.7	99.7	99.7	99.7	99.7

**Table E6** %Methylene blue removal at leonardite dose 0.2-3 g, at the initial concentration 110 mg/L

Leonardite Quantity (g)	%Methylene blue removal				
	1	2	3	4	5
0.200	92.8	99.2	99.0	95.1	93.8
0.400	99.7	99.6	99.6	99.7	99.6
0.700	99.7	99.7	99.7	99.8	99.7
1.00	99.8	99.8	99.7	99.8	99.6
3.00	99.8	99.8	99.8	99.8	99.8

**Table E7** The amount of methylene blue adsorbed at leonardite dose 0.200-3.00 g, at the initial concentration 60.00 mg/L

<b>Leonardite Quantity (g)</b>	<b>The amount of methylene blue adsorbed</b>

-0.346	1.17	18.7	3.7	0.8325	
-0.283	1.24				
-0.224	1.30				
0.255	1.35				
0.611	1.39				

## CURRICULUM VITAE

**Name** Miss Suttasinee Kantanyoo

**Date of birth** June 8, 1982

**Academic status:**

- High school certificate holder from Uttaraditdarunee School, Uttaradit, 2001.
- B.Sc. (Chemistry), Naresuan University, 2005.
- M.S. (Material Science), Chiang Mai University, 2007.

**Grants:**

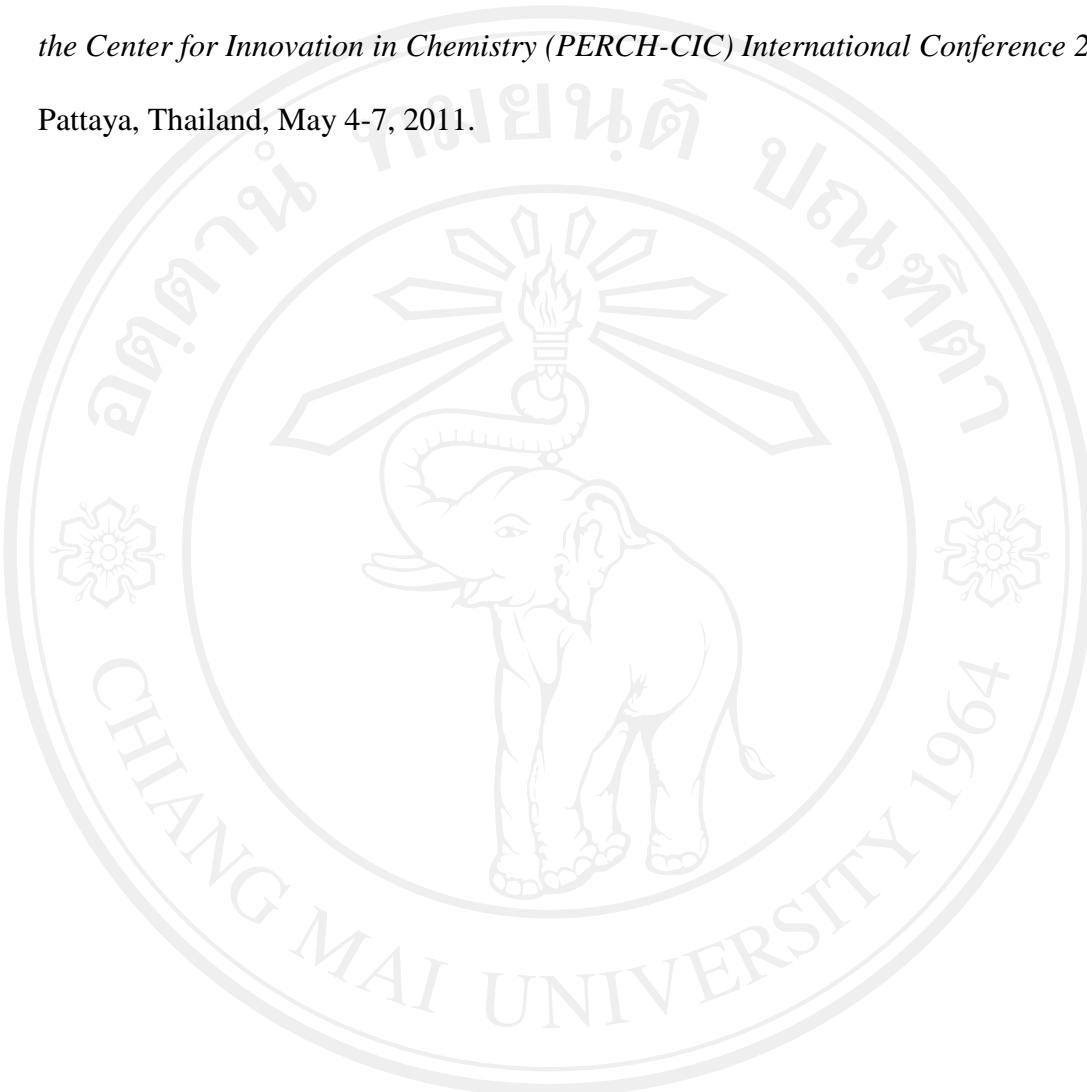

Financial support from the Center of Excellence for Innovation in Chemistry (PERCH-CIC) Commission on Higher Education, Ministry of Education.

A research funding partially supported by the Graduate School, Chiang Mai University.

**Conference:**

Katanyoo, S., Arquero, O., Naksata, W., Thiansem S., Sooksamiti, P., "Adsorption Behavior of Copper (II) Ion on Leonardite Prepared from Coal Waste" in *Pure and Applied Chemistry International Conference 2010*, Ubon Ratchathani, Thailand, January 21-23, 2010.

Katanyoo, S., Arquero, O., Naksata, W., Thiansem S., Sooksamiti, P.,  
“Adsorption Behavior of Copper(II) Ion on Leonardite Prepared from Coal Waste” in
