ACKNOWLEDGEMENTS

The author would like to express her sincere gratitude and is greatly indebted to her thesis advisor, Assoc. Prof. Dr. Jaron Jakkumee, for his kind supervision, invaluable guidance, comments, suggestions and consistent motivation and constant encouragement throughout the study.

The author is grateful to Dr. Ponlayuth Sooksamiti (The Office of Primary Industry and Mine Region 3, Chiang Mai) for his valuable comments, guidance discussions, and support of water sample and some instruments.

The author is truly grateful to Asst. Prof. Dr. Yuthasak Vaneesorn and Dr. Kritsana Jitmanee for their valuable comments, suggestions and discussion.

The author gratefully acknowledges the Center of Excellence for Innovation in Chemistry (PERCH-CIC) for granting the scholarship throughout her study. The Graduate School and Department of Chemistry is also acknowledged for partial support. She would like to thank her friends at the Flow Based Analysis Research group (FBA) and the Unit of Instrumentation and Electrochemistry (UIE) for their encouragements and friendship.

The author expresses her greatest gratitude to her parents, younger sister, and everyone whom may concern to her success for their endless love and continual encouragement even in a difficult time. Finally, She would like to thank those whose names are not listed here, who have one way or another contributed to the success of this work.
