

TABLE OF CONTENTS

	Page
Acknowledgements	iii
Abstract (English)	v
Abstract (Thai)	ix
List of tables	xxi
List of figures	xxv
Abbreviations and symbols	xxxv
Chapter 1 General introduction and thesis outline	1
Chapter 2 Literature review	
2.1 Orchid	5
2.2 Terrestrial orchid	8
2.3 Orchid seed	8
2.4 Orchid in Thailand	13

TABLE OF CONTENTS (CONTINUED)

	Page
2.5 Mycorrhiza	15
2.6 Orchid mycorrhiza	19
2.7 Orchid mycorrhizal interactions	21
2.8 Isolation and identity of orchid mycorrhizal fungi	21
2.9 Roles of mycorrhizal associations	28
2.10 Siderophores production	30
2.11 Plant growth hormone, Indole-3-acetic acid (IAA), production	34

Chapter 3 Isolation and identification of orchid mycorrhizal fungi

3.1 Introduction	39
3.2 Materials and methods	40
3.2.1 Orchid source and root sampling	40
3.2.2 Orchid roots observation and mycorrhizal colonization	41

TABLE OF CONTENTS (CONTINUED)

	Page
3.2.3 Fungal isolation	41
3.2.4 Fungal identification	45
3.2.4.1 Morphological observation	45
3.2.4.2 Molecular analysis	45
3.3 Results	47
3.3.1 Orchid roots observation and mycorrhizal colonization	47
3.3.2 Fungal isolation and identification	51
3.4 Discussion	59

Chapter 4 Effects of orchid mycorrhizal fungi on symbiotic seed germination

4.1 Introduction	62
4.2 Materials and methods	64
4.2.1 Orchid seed collection	64

TABLE OF CONTENTS (CONTINUED)

	Page
4.2.2 Orchid seed viability test	64
4.2.3 Symbiotic seed germination study of <i>P.susannae</i>	65
4.2.3.1 Effects of agar media on symbiotic seed germination	65
4.2.3.2 Effects of endophytic fungi recovered from <i>P. susannae</i> on symbiotic seed germination	66
4.2.3.3 Effects of mycorrhizal fungi on symbiotic seed germination	67
4.3 Results	71
4.3.1 Symbiotic seed germination of <i>P. susannae</i>	71
4.3.1.1 Effects of agar media on symbiotic seed germination	71
4.3.1.2 Effects of endophytic fungi recovered from <i>P. susannae</i> on symbiotic seed germination	73

TABLE OF CONTENTS (CONTINUED)

	Page
4.3.1.3 Effects of mycorrhizal fungi on symbiotic seed germination	76
4.4 Discussion	80
Chapter 5 Screening for indole-3-acetic acid (IAA) and siderophores production by endophytic fungi	
5.1 Introduction	85
5.2 Materials and methods	87
5.2.1 Colorimetric assay for IAA determination	87
5.2.2 Effect of L-tryptophan concentration on IAA production	88
5.2.3 Effect of incubation period on IAA production	88
5.2.4 Extraction of fungal IAA and thin layer chromatography	88
5.2.5 Evaluation of IAA biological activity	89
5.2.5.1 Kidney bean root cutting	89

TABLE OF CONTENTS (CONTINUED)

	Page
5.2.5.2 Corn seed germination	90
5.2.5.3 Elongation of rice coleoptiles	90
5.2.6 Siderophores production	91
5.2.6.1 Screening for siderophores production	91
5.2.6.2 Chemical determination of produced siderophores	91
5.2.7 Statistic analysis	92
5.3 Results	92
5.3.1 Determination of fungal IAA	92
5.3.2 Effect of L-tryptophan concentration on IAA production	94
5.3.3 IAA extraction and thin layer chromatography	97
5.3.4 Evaluation of IAA biological activities of fungal IAA	97
5.3.4.1 Kidney bean root cutting	97
5.3.4.2 Corn seed germination	99
5.3.4.3 Elongation of rice coleoptiles	101

TABLE OF CONTENTS (CONTINUED)

	Page
5.3.4 Detection for siderophores production	102
5.4 Discussion	105
Chapter 6 Optimization of orchid mycorrhizal fungi on media	
6.1 Introduction	109
6.2 Materials and methods	110
6.2.1 Effects of temperature on fungal growth on PDA	110
6.2.2 Effects of pH on fungal growth on PDA	110
6.2.3 Evaluation of suitable grain and potting media for fungal inoculum production	112
6.3 Results	113
6.3.1 Effects of temperature on fungal growth on PDA	113
6.3.2 Effects of pH on fungal growth on PDA	118

TABLE OF CONTENTS (CONTINUED)

	Page
6.3.3 Evaluation of suitable grain and potting media for fungal inoculum production	122
6.4 Discussion	124
Chapter 7 Mycorrhizal colonization and effects of mycorrhizal fungi on growth of orchid seedlings	
7.1 Introduction	127
7.2 Materials and methods	129
7.2.1 Fungal inoculum	129
7.2.2 Symbiotic cultivation of orchid seedlings	129
7.2.3 Evaluation of symbiotic orchid seedlings	130
7.2.4 Determination of mycorrhizal colonization	131
7.2.5 Statistic analysis	132
7.3 Results	132

TABLE OF CONTENTS (CONTINUED)

	Page
7.3.1 Evaluation of symbiotic orchid seedlings	132
7.3.2 Determination of mycorrhizal colonization	132
7.4 Discussion	135
Chapter 8 General discussion	138

Curriculum Vitae	179

LIST OF TABLES

Table	Page
2.1 Seed germination and protocorm developmental stages use for determination of growth and development of terrestrial orchid <i>in vitro</i>	12
2.2 Some terrestrial orchid species in Thailand	14
2.3 Types of mycorrhizal associatuions	18
2.4 The major members of orchid mycorrhizal fungi	20
2.5 Classification of the Rhizoctonia-forming heterobasidiomycetes	26
2.6 Types of interspecies antagonisms leading to biological control of plant pathogens	33
2.7 Predominant siderophore types in major mycorrhizal types	34
2.8 Several microorganisms which are able to converted L-tryptophan to indole-3-acetic acid (IAA)	37
3.1 Collection site and time of collection of six terrestrial orchid samples	47
3.2 Endophytic fungi isolated from roots of six terrestrial orchids	53

LIST OF TABLES (CONTINUED)

Table	Page
4.1 Mycorrhizal fungi isolated from roots of <i>Pecteilis susannae</i> and used to determined effects of agar media on symbiotic seed germination	68
4.2 Seed germination and protocorm developmental stages use for determination of growth and development of <i>Pecteilis susannae</i> <i>in vitro</i>	68
4.3 Endophytic fungi isolated from roots of <i>Pecteilis susannae</i> and used in symbiotic seed germination	69
4.4 Mycorrhizal fungi isolated from roots of <i>Pecteilis susannae</i> , <i>Eulophia spectabilis</i> , <i>Paphiopedilum</i> , and <i>Spathoglottis affinis</i> and used in symbiotic seed germination	70
4.5 Effects of 3 agar media (Oatmeal agar, Cellulose agar and Vacin and Went agar) on symbiotic seed germination and protocorm development of <i>Pecteilis susannae</i> 70 days after sowing	73
4.6 Effects of 11 endophytic fungi on seed germination and protocorm development of <i>Pecteilis susannae</i> 133 days after sowing	78

LIST OF TABLES (CONTINUED)

Table	Page
5.1 Selected endophytic fungi isolated from root of Thai native terrestrial orchids, <i>Spathoglottis affinis</i> , <i>Paphiopedelum bellatulum</i> and <i>Phaius tankervilleae</i>	92
5.2 IAA production by endophytic fungi isolated from root of six terrestrial orchids	93
5.3 Effect of IAA produced by <i>Colletotrichum gloeosporioides</i> CMU-AU 006, <i>Epulorhiza</i> sp. CMU-SLP 007 and <i>Epulorhiza</i> sp. CMU-NUT 013 on root to shoot ratio of corn	101
5.4 Siderophores production by endophytic fungi isolated from root of six terrestrial orchids	103
6.1 Orchid mycorrhizal fungi isolated from roots of six terrestrial orchids and used in optimization of fungal growth temperature and pH	111
6.2 Grain and potting media used for evaluation of suitable material for fungal inoculum production	112

LIST OF TABLES (CONTINUED)

Table	Page
6.3 The optimal growth pH evaluated from fungal dry weight and fungal colony diameter of orchid mycorrhizal fungi isolated from roots of six terrestrial orchids after cultured on PDA for 10 days	119
7.1 Effects of mycorrhizal inoculum of fungal isolates CMU-DP 506, <i>Epulorhiza</i> sp., and CMU-DP 514, <i>Tulasnella</i> sp., used for potting media on growth and survival rate of <i>Doritis pulcherrima</i> seedlings after cultivation for 90 days	133
D Absorbance at 530 nm of various concentration of standard IAA	176
E Absorbance at 480 nm of various concentration of deferoxamine mesylate by iron-perchlorate assay	178

LIST OF FIGURES

Figure	Page
1.1 Structure of the thesis	4
2.1 The schematic overview of epiphytic orchid and terrestrial orchid	7
2.2 Orchid capsule and seed, the mature capsule of <i>Calanthe tricarina</i> , seed of <i>Calanthe tricarina</i> , and seed of <i>Liparis loeselii</i>	10
2.3 Growth stage used to determine germination and development of orchid seed <i>in vitro</i>	12
2.4 Mycorrhizal associations; the interaction of plant roots, soil (nutrients in soil) and fungi (Brundrett <i>et al.</i> 1996)	16
2.5 A schematic overview of the different forms of mycorrhizas	17
2.6 The coils of fungal hyphae, pelotons, of orchid mycorrhizal fungi within cortex cells of orchid roots	20
2.7 Drawing of a typical orchid mycorrhizal fungi, <i>Rhizoctonia repen</i> (<i>Tulasnella calospora</i>), isolated in pure culture	23

LIST OF FIGURES (CONTINUED)

Figure	Page
2.8 Internal transcribed spacer (ITS) regions and recognized sites of ITS primers and Large subunit (LSU) RNA and recognized sites of LSU primers	27
2.9 Mechanism of iron acquisition by microbial siderophore	32
2.10 Pathways for the microbial biosynthesis of indole-3-acetic acid (IAA) from tryptophan	36
3.1 Collection sites of terrestrial orchid samples	43
3.2 Location of Chiang Mai province, in northern part of Thailand	44
3.3 <i>Doritis pulcherrima</i>	48
3.4 <i>Eulophia spectabilis</i>	48
3.5 <i>Paphiopedilum bellatulum</i>	49
3.6 <i>Pecteilis susannae</i>	49
3.7 <i>Phaius tankervilleae</i>	50
3.8 <i>Spathoglottis affinis</i>	50

LIST OF FIGURES (CONTINUED)

Figure	Page
3.9 Isolation of fungal endophytes from roots of <i>Pecteilis susannae</i>	52
3.10 Percentages of the occurrence of endophytic fungal taxa isolated from roots of six terrestrial orchids	56
3.11 <i>Epulorhiza</i> isolates	57
3.12 Maximum-parsimony trees based on an alignment of internal transcribed spacer1, 5.8S ribosomal RNA gene and internal transcribed spacer 2 of 19 fungal endophytes isolated from roots of six terrestrial orchids	58
4.1 <i>Pecteilis susannae</i> in natural habitat (site 2: Sa-Lunag, Chiang Mai, Thailand)	65
4.2 Viable seed with the embryo stained red and hyaline embryo of dead seed of <i>Pecteilis susannae</i> after being treated with tetrazolium	72
4.3 Effects of 8 endophytic fungi on seed germination and protocorm development of <i>Pecteilis susannae</i> 70 days after sowing	75

LIST OF FIGURES (CONTINUED)

Figure	Page
4.4 Symbiotic seed germination and protocorm developmental stages of <i>Pecteilis susannae</i> using fungal endophyte <i>Epulorhiza</i> sp., CMU-AUG 013, cultured on Oatmeal agar 70 days after sowing	76
4.5 Symbiotic seed germination and protocorm developmental stages of <i>Pecteilis susannae</i> using mycorrhizal fungi <i>Epulorhiza</i> sp., CMU-AUG 007, cultured on Oatmeal agar 133 days after sowing	77
4.6 Effects of 11 endophytic fungi on seed germination and protocorm development of <i>Pecteilis susannae</i> 133 days after sowing	79
5.1 Effect of L-tryptophan concentration on IAA production by <i>Colletotrichum gloeosporioides</i> CMU-AU 006, <i>Epulorhiza</i> sp. CMU-SLP 007 and <i>Epulorhiza</i> sp. CMU-NUT 013	95
5.2 Effect of incubation period on IAA production by <i>Colletotrichum gloeosporioides</i> CMU-AU 006	96

LIST OF FIGURES (CONTINUED)

Figure	Page
5.3 Effect of incubation period on IAA production by <i>Epulorhiza</i> sp. CMU-SLP 007	96
5.4 Effect of incubation period on IAA production by <i>Epulorhiza</i> sp. CMU-NUT 013	97
5.5 Effect of IAA produced by <i>Colletotrichum gloeosporioides</i> CMU-AU 006, <i>Epulorhiza</i> sp. CMU-SLP 007 and <i>Epulorhiza</i> sp. CMU-NUT 013 on root formation of kidney bean root cutting	98
5.6 Effect of IAA produced by <i>Colletotrichum gloeosporioides</i> CMU-AU 006, <i>Epulorhiza</i> sp. CMU-SLP 007 and <i>Epulorhiza</i> sp. CMU-NUT 013 on corn seed germination and the length of root	100
5.7 Effect of IAA produced by <i>Colletotrichum gloeosporioides</i> CMU-AU 006, <i>Epulorhiza</i> sp. CMU-SLP 007 and <i>Epulorhiza</i> sp. CMU-NUT 013 on elongation of rice coleoptiles	102
5.8 The Chrome Azurol S (CAS) agar plate assay showing the purplish-red and yellow halo after inoculated with the active fungal isolates for 14 days	105

LIST OF FIGURES (CONTINUED)

Figure	Page
6.1 Effects of temperature on growth of fungal isolate CMU-AUG 028, <i>Epulorhiza</i> sp., after culturing on PDA and incubation at 20°C for 10 days	113
6.2 Effects of temperature on growth (dry weight) of orchid mycorrhizal fungi isolated from roots of <i>Pecteilis susannae</i> after cultured on PDA for 10 days	114
6.3 Effects of temperature on growth (colony diameter) of orchid mycorrhizal fungi isolated from roots of <i>Pecteilis susannae</i> after cultured on PDA for 10 days	114
6.4 Effects of temperature on growth (dry weight) of orchid mycorrhizal fungi isolated from roots of <i>Eulophia spectabilis</i> after cultured on PDA for 10 days	115
6.5 Effects of temperature on growth (colony diameter) of orchid mycorrhizal fungi isolated from roots of <i>Eulophia spectabilis</i> after cultured on PDA for 10 days	115

LIST OF FIGURES (CONTINUED)

Figure	Page
6.6 Effects of temperature on growth (dry weight) of orchid mycorrhizal fungi isolated from roots of <i>Paphiopedilum bellatullum</i> and <i>Phaius tankervilleae</i> after cultured on PDA for 10 days	116
6.7 Effects of temperature on growth (colony diameter) of orchid mycorrhizal fungi isolated from roots of <i>Paphiopedilum bellatullum</i> and <i>Phaius tankervilleae</i> after cultured on PDA for 10 days	116
6.8 Effects of temperature on growth (dry weight) of orchid mycorrhizal fungi isolated from roots of <i>Doritis pulcherrima</i> and <i>Spathoglottis affinis</i> after cultured on PDA for 10 days	117
6.9 Effects of temperature on growth (colony diameter) of orchid mycorrhizal fungi isolated from roots of <i>Doritis pulcherrima</i> and <i>Spathoglottis affinis</i> after cultured on PDA for 10 days	117
6.10 Effects of pH on growth of fungal isolate CMU-AUG 028, <i>Epulorhiza</i> sp.	118

LIST OF FIGURES (CONTINUED)

Figure	Page
6.11 Effects of pH on growth (dry weight) of orchid mycorrhizal fungi isolated from roots of six terrestrial orchids after culturing on PDA for 10 days	120
6.12 Effects of pH on growth (colony diameter) of orchid mycorrhizal fungi isolated from roots of six terrestrial orchids after culturing on PDA for 10 days	121
6.13 Mycelium growth of orchid mycorrhizal fungi, <i>Epulorhiza</i> sp. (CMU-AUG 007), isolated from roots of <i>Pecteilis susanne</i> in grain and potting media after incubation at 30°C for 15 days	122
6.14 Mycelium growth of orchid mycorrhizal fungi, <i>Epulorhiza</i> sp. (CMU-AUG 028), isolated from roots of <i>Pectelis susannae</i> in grain and potting media after incubation at 30°C for 15 days	123
6.15 Mycelium growth of orchid mycorrhizal fungi, <i>Epulorhiza</i> sp. (CMU-AUG 014), isolated from roots of <i>Eulophia spectabilis</i> in grain and potting media after incubation at 30°C for 15 days	123

LIST OF FIGURES (CONTINUED)

Figure	Page
6.16 Growth of mycelium of orchid mycorrhizal fungi, <i>Epulorhiza</i> sp. (CMU-AUG 028), isolated from roots of <i>Pectelis susannae</i> , in grain and potting media	124
7.1 Orchid mycorrhizal inocula of fungal isolates CMU-DP 506, <i>Epulorhiza</i> sp. and CMU-DP 514, <i>Tulasnella</i> sp.	130
7.2 Seedlings of <i>Doritis pulcherrima</i> after cultivation using non mycorrhizal potting medium, potting medium with fungal isolate CMU-DP 506, <i>Epulorhiza</i> sp. and CMU-DP 514, <i>Tulasnella</i> sp. for 90 days	133
7.3 Peloton structures, coiled hyphae, in cortical cells of <i>Doritis pulcherrima</i> seedlings	134
7.4 Root and crop colonization by mycorrhizal fungi of <i>Doritis pulcherrima</i> seedlings after cultivation using potting media mixed with mycorrhizal inoculum of CMU-DP 506, <i>Epulorhiza</i> sp., and CMU-DP 514, <i>Tulasnella</i> sp., for 90 days	135
D Standard curve of IAA concentration against absorbance at 530 nm	176

using deferoxamine mesylate as standard 178

ABBREVIATIONS AND SYMBOLS

AM	arbuscular mycorrhiza
anam.	anamorph
<i>Asco-</i>	<i>Ascomycetes</i>
<i>Basidio-</i>	<i>Basidiomycetes</i>
cm	centimeter
DNA	deoxyribonucleic acid
E	embryo
ECM	ectomycorrhiza
g	gram
IAA	indole-3-acetic acid
ITS	internal transcribed spacer
L	liter
LSU	large subunit
mg	milligram
min	minute

ml	milliliter
mm	millimeter
M	molar (mol per liter)
mM	milli Molar
MW	molecular weight
n	number
nm	nanometer
No.	number
P	probability
PCR	Polymerase Chain Reaction
PDA	Potato Dextrose Agar
PDB	Potato Dextrose Broth
ppm	part per million
rh	rhizosphere soil
rt	root
sec	second
TLC	thin layer chromatography

The background of the page features a large, faint watermark of the Chiang Mai University seal. The seal is circular, with an elephant in the center facing left. Above the elephant is a five-pointed star. The text "CHANG MAI UNIVERSITY 1964" is written in a circle around the elephant. In Thai script, "มหาวิทยาลัยเชียงใหม่" (Mahavithayalai Chiang Mai) is written along the top arc, and "ปณิธาน" (Pannithan) is written along the right arc.

rpm	rotation per minute
UV	ultraviolet
VAM	vesicular-arbuscular mycorrhiza
v/v	volume by volume
w/v	weight by volume
w/w	weight by weight
°C	degree Celsius
μg	microgram
μl	microlitre
μm	micrometer
μmol	micromole
