## ACKNOWLEDGEMENTS

I would like to express my heartfelt gratitude and appreciation to my advisor, Asst. Prof. Dr. Winita Punyodom, for her kind supervision, invaluable guidance, encouragement and constant inspiration throughout the course of this research project and for giving me this opportunity to carry out research for Master's degree.

I would like to thank, Dr. Thanawadee Leejarkpai, for her useful suggestions at various stages during my work, also Mr. Monchai Tajan, for his help with my lab at the National Metal and Materials Technology Center (MTEC).

This research was supported from the Center of Excellence for Innovation in Chemistry (PERCH CIC), Commission on Higher Education, Ministry of Education and the PTT Public Company Limited are gratefully.

I would like to thanks staff of the National Metal and Materials Technology Center (MTEC) for the melt-blend processing, characterization and properties testing.

I also wish to express my sincere gratitude to the Department of Chemistry, Faculty of Science, Chiang Mai University, for kindly providing me with the laboratory and library facilities which made this study possible.

Similarly, I would also like to thanks researchers in the Biomedical Polymers Technology Unit, for their guidance and helpful suggestions concerning the use of the equipment in this research project.

Last and most of all, I am indebted to my family for their tender love and care and to all of my friends for their endless encouragement which has enabled me to achieve success in my postgraduate education.

Yupa Sriwirat
