ACKNOWLEDGEMENTS	iii
ABSTRACT (ENGLISH)	iv
ABSTRACT (THAI)	vii
TABLE OF CONTENTS	ix
LIST OF TABLES	xv
LIST OF FIGURES	xix
ABBREVIATIONS AND SYMBOLS	xxvi
CHAPTER 1 INTRODUCTION	1
1.1 Overview and background	1
1.2 Principle of flow injection analysis (FIA)	2
1.3 Micro flow analysis	4
1.3.1 Materials and fabrication technique of chips	12
1.3.2 Bonding techniques	23
1.3.3 Propelling system	29
1.3.4 Sample introduction to the microflow analysis system	35
1.3.5 Liquid mixing	39
1.3.6 Detection system	40
1.4 Nickel and zinc	44
1.4.1 Nickel	44
1.4.2 Determination of nickel	46

TABLE OF CONTENTS (Continued)

	Page
1.4.3 Zinc	52
1.4.4 Determination of zinc	54
1.5 Nitroso-R salt	56
1.6 Xylenol orange	57
1.7 Reasons for creating this work	58
1.8 Research objectives	59
CHAPTER 2 EXPERIMENTAL	60
2.1 Instrument and apparatus	60
2.2 Chemicals	61
2.3 Preparation of standard solutions and reagents	63
2.3.1 Preparation of standard solutions and reagents for nickel determination with FIA	63
2.3.2 Preparation of standard solutions and reagents for zinc determination	64
2.4 Water samples collection and pretreatment for metal determination	65
2.4.1 Water samples collection and pretreatment for nickel determination	65
2.4.2 Water samples pretreatment for zinc determination	65
2.5 Methodology for the FIA system for determination of nickel with nitroso-R salt as complexing agent	66

TABLE OF CONTENTS (Continued)

	Page
2.5.1 Preliminary studies of spectrophotometric of Ni-nitroso-R salt complex for selecting the maximum absorption wavelength	66
2.5.2 Study of the composition of the Ni(II)-nitroso-R salt complex with mole-ratio method	67
2.5.3 The FIA system for determination of nickel	67
2.5.4 Analytical characteristics study	69
2.6 Mini-CNC machine modification with diode laser for fabrication of PMMA chips	72
2.6.1 Home-made mini-CNC machine	72
2.6.2 Mini-CNC machine modification with diode laser	74
2.6.3 The design of PMMA chip	74
2.6.4 Fabrication of PMMA chips	75
2.6.5 Investigation of size of microchannel	77
2.6.6 Surface modification and thermal bonding	78
2.6.7 A home-made PMMA microflow analyser	79
2.6.8 Validation of the proposed PMMA chip	81
2.7 Fabrication of a PMMA chip with CO ₂ laser for determination of Zn(II)	81
2.7.1 The design of PMMA microchannels	81
2.7.2 CO ₂ laser machine setup	82

TABLE OF CONTENTS (Continued)

	Page
2.7.3 Dimensions of PMMA microchannels	84
2.7.4 Surface modification and thermal bonding	84
2.7.5 Fabrication of microflow analyzer	84
2.7.6 Analytical characteristics study	89
CHAPTER 3 RESULTS AND DISCUSSION	91
3.1 Determination of Ni(II) by flow injection analysis	91
3.1.1 Preliminary studied and selection of the absorption wavelength	91
3.1.2 The composition of Ni(II)-nitroso-R salt complex by mole-ratio method	93
3.1.3 Design of the flow injection system for Ni(II) determination	95
3.1.4 Optimization of the experimental conditions	96
3.1.5 Analytical characteristics	105
3.1.6 Determination of Ni(II) in water samples	114
3.2 Mini-CNC machine modification with diode laser for rapid fabrication of PMMA chips	117
3.2.1 Mini-CNC machine modification with diode laser	117
3.2.2 Design and fabrication of the PMMA chip	117
3.2.3 The depth and the width of PMMA microchannel	119
3.2.4 The smoothness of microchannels	125

TABLE OF CONTENTS (Continued)

	Page
3.2.5 Bonding of PMMA microchannels	128
3.2.6 Validation of the proposed PMMA chip from diode laser technique	129
3.2.7 Repeatability and reproducibility	131
3.2.8 Accuracy and sample throughput	132
3.2.9 Application to water samples analysis	132
3.3 Fabrication of PMMA chip with CO ₂ laser for determination of zinc by microflow analysis using xylenol orange as complexing agent	134
3.3.1 The patterns of PMMA chip	134
3.3.2 The depth and the width of microchannel PMMA using CO ₂ laser	137
3.3.3 The smoothness of PMMA microchannels	141
3.3.4 Bonding of PMMA chip	143
3.3.5 Preliminary study on the absorption spectra of Zn(II)-xylenol orange complex in the presence of quinine photosensitizer	145
3.3.6 Determination of Zn(II) by micro flow analysis using xylenol orange as complexing agent	145
3.3.7 Design and fabrication of the micro flow system for zinc (II) determination	147

TABLE OF CONTENTS (Continued)

	Page
3.3.8 Optimization of the experimental conditions by univariate method	150
3.3.9 Analytical characteristics	161
3.3.10 Determination of Zn(II) in water samples	169
CHAPTER 4 CONCLUSIONS	172
4.1 Fabrication of a simple FIA analyzer for nickel(II) determination	172
4.2 Mini-CNC machine modified with diode laser for fabrication of PMMA chip	173
4.3 Fabrication of a PMMA chip using CO ₂ laser for determination of Zn(II)	176

CURRICULUM VITAE	237

LIST OF TABLES

Table	Page
1.1 The applications of lab-on-a-chip analysis in various samples	6
1.2 Summary of materials and techniques for fabrication of microfluidic devices	18
1.3 A brief review of the methods for the determination of nickel	51
1.4 A brief review of the methods for the determination of zinc	56
2.1 The studied range for the optimization of all parameters of FIA	69
2.2 The studied ranges for the optimization of all parameters of μ FA	88
3.1 Effect of nitroso-R salt concentrations for mole-ratio Ni-nitroso-R salt complex	94
3.2 Effect of pH on the sensitivity	98
3.3 Effect of nitroso-R salt concentration on the sensitivity of Ni(II)-nitroso-R salt complex	99
3.4 Effect of reaction coil length on the sensitivity	101
3.5 Effect of flow rate on the sensitivity	103
3.6 Effect of sample volume on the sensitivity	104
3.7 Peak height at various Ni(II) concentrations for linearity inspect of the calibration graph	106

LIST OF TABLES (Continued)

Table	Page
3.8 Precision of verification using standard $1.0 \text{ mg L}^{-1} \text{ Ni(II)}$	108
3.9 The absorbance of Ni(II)-nitroso-R salt complex for calibration curve	110
3.10 Calculation of detection limit of FIA spectrophotometric for Ni(II) determination	111
3.11 Tolerable levels of interferences ions effect on the signal obtained from $1.0 \mu\text{g mL}^{-1} \text{ Ni(II)}$	113
3.12 The optimum conditions and the analytical characteristic for Ni(II) determination with the FIA system	114
3.13 Concentrations of Ni(II) in water samples analyzed by using the proposed FIA system	115
3.14 Comparative determination of Ni(II) in water samples by proposed FIA and FAAS	116
3.15 The width of microchannel at constant laser power of 5 W	122
3.16 The depth of microchannel at constant laser power of 5 W	123
3.17 The width of microchannel at constant X-Y movement speed of 4 mm s^{-1}	124
3.18 The depth of microchannel at constant X-Y movement speed of 4 mm s^{-1}	124

LIST OF TABLES (Continued)

Table	Page
3.19 Repeatability and reproducibility of replicate determination of Fe(III)	131
3.20 Comparative determination of total iron in water samples by the proposed μ rFA and FAAS methods	133
3.21 The width of microchannel at constant laser power of 8 W	138
3.22 The depth of microchannel at constant laser power of 8 W	139
3.23 The width of microchannel at constant beam speed of 5 mm s ⁻¹	140
3.24 The depth of microchannel at constant beam speed of 5 mm s ⁻¹ obtained by the proposed μ rFA	140
3.25 Preliminary conditions before optimization of the PMMA μ rFA systems	151
3.26 Effect of wavelength on the sensitivity of Zn(II)-(XO) ₂ complex	152
3.27 The effect of pH on the sensitivity of Zn(II)-(XO) ₂ complex measured at 590 nm	154
3.28 Effect of several concentration of xylenol orange on the sensitivity	155
3.29 Effect of concentration of quinine hydrochloride on the sensitivity	157
3.30 Effect of flow rate on the sensitivity of Zn(II)-(XO) ₂	158

LIST OF TABLES (Continued)

Table		Page
3.31	Effect of injection volume on the sensitivity of Zn(II)-(XO) ₂	160
3.32	Optimum conditions for Zn(II) determination using the home-made PMMA microflow analyzer	161
3.33	Linearity of Zn(II) determination with μ FA system	162
3.34	The precision study using two standard solutions (0.5 and 1.0 mg mL ⁻¹)	164
3.35	The absorbance of Zn(II)-(XO) ₂ complex for calibration curve	166
3.36	Calculation of detection limit of μ FA spectrophotometric determination of zinc (II)	167
3.37	Tolerable levels of interfering ions effect on the absorption signal	169
3.38	Concentrations of Zn(II) in water sample (mg L ⁻¹) analyzed by using the proposed μ FA	170
3.39	Comparative determination of Zn(II) in water samples by proposed PMMA chip and FAAS	171

LIST OF FIGURES

Figure	Page
1.1 The basic components of the FIA system	3
1.2 The FIA gram; S : time of injection, H : the peak height, W : the peak width at a selected level, A : the peak area, and T : the residence time corresponding to the peak height measurement	4
1.3 The lab-on-a-chip patterns	5
1.4 Process of photolithographic fabrication	19
1.5 Schematic diagram of the laser micromachining process on PMMA	22
1.6 Glass to silicon bonding diagram	27
1.7 Syringe pumps	30
1.8 Micro peristaltic pump	31
1.9 Piezoelectric micro pump	33
1.10 Electroosmotic flow	34
1.11 Nickel	45
1.12 Zinc	52
1.13 The Structure formula of nitroso-R salt	57
2.1 The design of the FIA system for the determination of Ni(II): S, sample; M, mixing coil; I, injection valve; P, pump; D, detector	68

LIST OF FIGURES (Continued)

Figure		Page
2.2	A home-made mini-CNC machine; M1, M2, M3 : motors, C:control cage , P: platform and S: spindle	73
2.3	Diode laser of 5 W (808 nm) and focusing lens (New Diode Laser Company, Xibeiwang, Haidian, Beijing 100094, China)	74
2.4	The design of the PMMA microchannels patterns	75
2.5	KCAM program for control diode laser mini-CNC machine	76
2.6	Schematic view of diode laser mini-CNC machine system with X-Y stages	77
2.7	The bonding block for two PMMA substrates	79
2.8	The microflow analyzer with the T-junction PMMA chip	81
2.9	CO ₂ laser machine (SF960 Jinan Senfeng Technology Co., LTD, China)	83
2.10	Laser operation and setup parameters program for fabrication of PMMA chip	83
2.11	The μ FA system with Y-junction pattern for Zn(II) determination: Standard, Zn(II)/water sample; reagent, XO mixed quinine photosensitizer	87

LIST OF FIGURES (Continued)

Figure		Page
3.1	The absorbance of Ni(II)-nitroso-R salt complexes measured at various wavelength in the range from 380 to 700 nm with nitroso-R salt at pH 8.0; 2.0×10^{-4} mole L ⁻¹ nitroso-R salt	92
3.2	Mole-ratio study of Ni(II)-nitroso-R salt system; Ni 1.0×10^{-5} mol L ⁻¹ , pH 8.0, wavelength 490 nm	94
3.3	The chemical reaction between Ni(II) and nitroso-R salt	95
3.4	The proposed FIA system for nickel determination; S : sample, R : reagent, V : selection valve, M : motor driver unit, P : peristaltic pump, MC : mixing coil, C : personal computer, D : spectrometer and W : waste	96
3.5	Relationship between pH and the sensitivity of the calibration curve	98
3.6	Effect of nitroso-R salt concentration on the sensitivity of Ni(II)-nitroso-R salt complex	100
3.7	Effect of the coil length on the sensitivity of Ni(II)-nitroso-R salt complex	101
3.8	Effect of flow rate on the sensitivity of Ni(II)-nitroso-R salt complex	103

LIST OF FIGURES (Continued)

Figure		Page
3.9	Effect of sample introduction volume on the sensitivity of Ni(II)-nitroso-R complex	105
3.10	Relationship between peak height and concentrations of Ni(II)	107
3.11	FIA-gram of standard Ni(II) solution at (a) 0.25 mg L ⁻¹ , (b) 0.5 mg L ⁻¹ , (c) 1.5 mg L ⁻¹ , (d) 2.5 mg L ⁻¹ and (e) 3.5 mg L ⁻¹ respectively	109
3.12	Calibration curve for Ni(II) determination using the FIA system	110
3.13	The diode laser mini-CNC machine system	118
3.14	The microchannel patterns are designed from Drawing program	119
3.15	The complete PMMA chips make from mini-CNC machine modified with diode laser and the length of microchannels; (a):2 cm, (b): 10 cm, (c): 20 cm, (d): 30 cm	119
3.16	SEM images of PMMA chips with different depths of channels using movement speed of (a) 1.0, (b) 2.0 and (c) 3.0 mm s ⁻¹ (power 5 W)	120

LIST OF FIGURES (Continued)

Figure		Page
3.17	SEM images of PMMA substrates with different width of channels using laser power of (a) 3.5 W, (b) 4.0 W and (c) 4.5 W (speed 4 mm s ⁻¹)	121
3.18	Relationship between X-Y movement speed and geometric parameters	123
3.19	Relationship between laser power and geometric parameters	124
3.20	SEM images of PMMA substrates show the smooth of channel with different scanning speed (5 W laser power)	126
3.21	SEM images of PMMA microchannel demonstrating the smooth effect of expose to CH ₂ Cl ₂ solution; (a) before exposure to CH ₂ Cl ₂ and (b) after exposure to CH ₂ Cl ₂ for 10 min	127
3.22	Cross section of the bonded microchannel	128
3.23	Fabrication procedures for the PMMA chip	129
3.24	Calibration curve of standard Fe(III) solution	130
3.25	Y-junction patterns of PMMA microchannels	135
3.26	The complete PMMA microchannel from CO ₂ laser machine	135
3.27	Cross section of the PMMA microchannel	136
3.28	Relation of beam speed on geometric parameters	139
3.29	Relation of laser power on geometric parameters	141

LIST OF FIGURES (Continued)

Figure	Page
3.30 SEM images close up of PMMA microchannels with beam speed of 5 (a), 10 (b), 15 (c) and 20 (c) mm s ⁻¹ and fixed laser power of 8 W	142
3.31 SEM image of a cross section of a bonded PMMA chip	143
3.32 Summary the steps for fabrication PMMA chip (4.0x4.0 cm ²)	144
3.33 The structure formula of xylenol orange	146
3.34 Absorption spectra of XO (1); XO-quinine (2); 1 ppm of Zn(II)-XO (3), 2 ppm of Zn(II)-XO (4), 3 ppm of Zn(II)-XO (5) against XO blank at pH 5.5; 1 ppm of Zn(II)-XO (6), 2 ppm of Zn(II)-XO (7), 3 ppm of Zn(II)-XO (8) against XO mixed with quinine blank at pH 5.5, XO concentration : 3.0×10^{-5} mol L ⁻¹ ; quinine hydrochloride concentration : 2.0×10^{-5} mol L ⁻¹	147
3.35 The microflow manifold for Zn (II) determination: S, sample; R, buffered nitroso-R salt; V, selection valve (Valcol Instrument); P, pump; M, a micro-flow analyzer; LED, light source; D, spectrophotometer (USB4000); N, computer; W, waste	149

LIST OF FIGURES (Continued)

Figure		Page
3.36	The intensity of light pass through the detection cell of PMMA chip	150
3.37	The absorption signal achieved from the Zn(II)-(XO) ₂ complex (2.0x10 ⁻⁴ mol L ⁻¹ quinine hydrochloride, 1.0 mg L ⁻¹ Zn(II), pH 5, 2x10 ⁻⁴ mol L ⁻¹ XO) using the proposed method	151
3.38	Effect of wavelength on the sensitivity for Zn determination	153
3.39	Effect of pH on the sensitivity of Zn(II)-(XO) ₂ complex	154
3.40	Effect of XO concentration on the sensitivity of Zn(II)-(XO) ₂ complex	156
3.41	Effect of quinine hydrochloride on the sensitivity of Zn(II)-(XO) ₂ complex	157
3.42	Effect of flow rate on the sensitivity of Zn(II)-(XO) ₂ complex	159
3.43	Effect of sample introduction volume on the sensitivity of Zn(II)-(XO) ₂ complex	160
3.44	Relationship between peak height and concentrations of Zn(II) 0.01-1.8 mg L ⁻¹	163
3.45	μFA grams for determining Zn(II) as Zn(II)-(XO) ₂ using the proposed μFA under the optimum conditions	165
3.46	Calibration curve of the μFA system for zinc determination	166

ABBREVIATIONS AND SYMBOLS

Abs	Absorbance
AU	Absorbance unit
CCD	Charge-coupled device
CE	Capillary electrophoresis
cm	Centimeter
COC	Cyclic olefin copolymer
CTC	Chlortetracycline
EOF	Electroosmotic flow
FIA	Flow injection analysis
h	Hour
i.d.	Internal diameter
IDTs	Inter digital transducers
L	Liter
LED	Light emitting diode
LOC	Lab-on-a-chip
LOD	Limit of detection
LOQ	Limit of quantitation
mg	Milligram
min	Minute
mL	Milliliter
mm	Millimeter
nm	Nanometer

PMT	photomultiplier tubes
o.d.	Outer diameter
PC	polycarbonate
PDMS	Poly(dimethylsiloxane)
PMMA	Polymethyl methacrylate
PTFE	Polytetrafluoroethylene
RSD	Relative standard deviation
SD	Standard deviation
s	Second
$\bar{x}$	Mean
XO	Xylenol orange
μ FA	Micro flow analysis
μ rFA	Micro reverse flow analysis
μ L	Microlitre
μ m	Micrometre
