	<b>Page</b>
ACKNOWLEDGEMENTS	iii
ABSTRACT	iv
TABLE OF CONTENTS	vii
LIST OF TABLES	xiii
LIST OF FIGURES	xvi
ABBREVIATION	xix
 <b>CHAPTER 1 Introduction and Literature Review</b>	 <b>1</b>
1.1 Background of the study	1
1.2 Rationale of the study	4
1.3 Objectives of the Study	5
1.4 Scopes of Study	5
1.5 Expected Benefits	5
1.6 Literature Review	6
<b>CHAPTER 2 Methodology of the Study</b>	<b>9</b>
2.1 Modeling system elements	9
2.1.1 Distribution network models	9
2.1.2 Line modeling	10
2.1.3 Line flows and loss	10
2.2 Distribution load flow technique	11
2.3 Technical line losses	11
2.3.1 Line loss calculation	11
2.3.2 Load balancing	15
2.3.3 Calculation of voltage drop	16
2.3.4 Capacitor bank and power factor (PF) correction	17
2.3.5 Optimal capacitor placement(OCAP)	19
2.3.5.1 Fixed capacitor allocation	19
2.3.5.2 Switched capacitor allocation	19
2.3.6 Switching optimization or reconfiguration	20

2.3.6.1 Problem formulation of network reconfiguration	22
2.3.6.2 The optimal branch exchange in a loop	23
2.3.7 Economic justification	25
2.3.8 Financial analysis	25
2.3.8.1 Net present value (NPV)	26
2.3.8.2 Internal rate of return	27
2.3.8.3 Payback period	27
<b>CHAPTER 3 Laos' Power System</b>	29
3.1 Current operation situation of PDNs in Lao PDR	29
3.2 Generation	29
3.3 Transmission	30
3.4 Distribution	31
3.4.1 Central area	33
3.4.2 Load characteristics	35
3.4.3 General characteristics of distribution system in Laos	36
3.5 MV distribution	37
3.6 Standard medium voltage supply	37
3.7 Distribution system configurations	37
3.7.1 Three phase MV	37
<b>CHAPTER 4 Power Systems Analysis</b>	39
4.1 Approach to power distribution technical losses	39
4.2 Load allocation	42
4.3 Process of line drawing	42
4.4 Process of CYMDIST program analysis	42
4.5 Basic process of CYDIST program analysis	43
4.6 Load data for distribution technical loss analysis	45
4.7 Process of line drawing	45
4.7.1 Line tracking and data transfer	45
4.7.2 Line drawing	46
4.7.3 Export to CYMDIST software	46
4.8 Conductor characteristics	47
4.8.1 Conductor diameter	47

4.8.2 Resistance at 20°C and 75°C	47
4.8.3 GMR (Geometric Mean Radius)	47
4.8.4 Nominal rating	49
4.9 Pole configuration (Spacing)	50
4.10 Types of conductor	51
4.11 Peak load forecast and load factor	52
4.12 Cost of technical losses	55
4.13 Statement of studies system	55
4.14 Basic software operation of CYMDIST	56
4.15 Feeder modeling	57
4.15.1 Necessary information / data	57
4.15.2 Modeling procedure	57
4.16 Load allocation	60
4.16.1 General information	60
4.16.2 Data required	60
4.16.3 Procedure of load allocation	61
4.17 Power flow calculation	62
4.17.1 General information	62
4.17.2 Procedure	62
4.18 Switching optimization	63
4.18.1 General information	63
4.19 Capacitor placement for distribution network	65
4.19.1 General information	65
4.19.2 Data required for CYMDIST analysis	66
4.19.3 Loading level setting	68
4.20 Copyright of CYMDIST software	69
<b>CHAPTER 5 Results Analysis and Discussion</b>	<b>70</b>
5.1 Assessment of the existing power distribution systems up to 2013	70
5.2 Network elements	70
5.3 Medium voltage of Vientiane Capital	71
5.4 Loads	71
5.5 2013 base case	72

5.6	2013 improved case	74
5.6.1	Load balancing	74
5.6.1.1	Result of load balancing in feeder MSS3.1 of Thatlaung substation	74
5.6.1.2	Result of load balancing in Tha Ngong substation	76
	◆ Feeder MSS8.1	76
	◆ Feeder MSS8.2	77
	◆ Feeder MSS8.3	77
5.6.1.3	Result of load balancing in Koksa-at substation	78
	◆ Feeder MSS9.1	78
	◆ Feeder MSS9.2	79
	◆ Feeder MSS9.3	80
	◆ Feeder MSS9.4	81
5.6.1.4	Result of load balancing in Naxaythong substation	81
	◆ Feeder MSS10.2	81
	◆ Feeder MSS10.3	82
5.6.1.5	Summarize of load balancing in distribution system of Vientiane capital	83
5.6.2	Optimal capacitor placement	84
5.6.2.1	Capacitor bank at 50 kVAR per phase	86
5.6.2.2	Capacitor bank at 100 kVAR per phase	88
5.6.2.3	Capacitor bank at 200 kVAR per phase	89
5.6.2.4	Summarizing of capacitor placement in distribution system of Vientiane capital	91
5.6.3	Switching optimization	91
5.6.3.1	Sokphalaung substation Switching Optimization Report	91
5.6.3.2	Sisakhet substation Switching Optimization Report	93

5.6.3.3	Thatlaung substation switching optimization report	95
5.6.3.4	Dongnasok substation switching optimization report	96
5.6.3.5	Phonthong substation switching optimization report	98
5.6.3.6	ThaNgon substation switching optimization report	100
5.6.3.7	Khoksa-at substation switching optimization report	102
5.6.3.8	Switching optimization report all feeders	103
5.6.3.9	Summarize of switching optimization in distribution system of Vientiane capital	106
5.6.4	Assumptions in the calculations	107
5.6.4.1	Tariff	107
5.6.4.2	Depreciation	108
5.6.4.3	Operation and Maintenance Cost (O&M)	108
5.6.4.4	Discount rate	108
5.6.4.5	Economic life of equipments	108
5.6.5	Analysis results	108
5.6.5.1	Improving of financial analysis in the cases	108
5.6.5.1.1	Summarizing economic of load balancing in distribution system	108
5.6.5.2	Economic parameters for capacitor placement	109
5.6.5.3	Results of financial analyses of switching optimization	111
<b>CHAPTER 6 Conclusion and Recommendation</b>		113
6.1	Conclusion	113
6.2	Recommendation	114
<b>REFERENCES</b>		116
<b>APPENDICES</b>		118
<b>APPENDIX A</b>	Single line diagram of distribution system in Vientiane Capital	119

<b>APPENDIX B</b>	Detailed information of abnormal conditions in the Vientiane substations (22 kV MV)	121
<b>APPENDIX C</b>	New Electricity Tariff Adjustment From 3/2012 to 12/2017	185
<b>APPENDIX D</b>	Detailed of data is use to calculate for economic of installation of capacitor bank	186
<b>APPENDIX E</b>	Copyright of CYMDIST software	193
<b>CURRICULUM VITAE</b>		195

## LIST OF TABLES

Table	Page
1.1 The summary of electricity demand forecast for Vientiane Capital	1
1.2 Existing substations and feeders in Vientiane capital	3
3.1 Energy demand (Including system losses)	33
3.2 Energy demand	34
3.3 Peak load	34
3.4 Results of power losses of the Vientiane Capital	35
3.5 Standard distribution system configuration	37
3.6 Frequency and voltage limit	37
4.1 Distribution loss of EDL's branches in 2010	39
4.2 Outline of modeling for using the software	44
4.3 Coefficient $GMR_k$ .	48
4.4 Positions of standard pole configuration for MV system	50
4.5 The conductor characteristics of EDL	51
4.6 Peak loads of MV feeders used for technical loss analysis	53
4.7 Cost of countermeasures against technical losses	55
4.8 Basic Software Operation Command	56
4.9 Loading conditions	66
5.1 Conductors specifications used for overhead lines of the Substations in Vientiane capital	71
5.2 The result of losses calculation of MSS system on 2013	72
5.3 Parameters load balancing of Tatlaung substation	75
5.4 Recommended rephasing for location: feeder MSS3.1 (means applied by user)	75
5.5 Feeder summary load balancing of Tatlaung substation	75
5.6 Recommended rephasing for location : feeder MSS8.1 (means applied by user)	76
5.7 Feeder summary of load balancing in Tha Ngon substation	76
5.8 Recommended rephrasing for location : feeder MSS8_2 ( means applied by user)	77
5.9 Feeder summary of load balancing in feeder MSS8_2	77

5.10	Recommended rephasing for location : feeder MSS8.3 ( means applied by user)	77
5.11	Feeder summary of load balancing feeder MSS8.3	78
5.12	Recommended rephasing for location : feeder MSS9.1 (means applied by user)	78
5.13	Feeder summary of load balancing in feeder MSS9.1	78
5.14	Recommended rephasing for location : feeder MSS9.2 (means applied by user)	79
5.15	Feeder summary of load balancing in feeder MSS9.2	79
5.16	Recommended rephasing for location : feeder MSS9_3 (means applied by user)	80
5.17	Feeder summary of load balancing in feeder MSS9.3	80
5.18	Recommended rephasing for location : feeder MSS9_4 ( means applied by user)	81
5.19	Feeder summary of load balancing in feeder MSS9.4	81
5.20	Recommended rephasing for location: feeder MSS10.2 ( means applied by user)	81
5.21	Feeder summary load balancing in feeder MSS10.2	81
5.22	Recommended rephasing for location : feeder MSS10_3 (means applied by user)	82
5.23	Feeder summary of load balancing in feeder MSS 10.3	83
5.24	Summarize load balancing of distribution system	84
5.25	Loading condition	85
5.26	Summarize result from program of capacitor bank 50kVAR	86
5.27	Summarize result from program of capacitor bank 100kVAR	88
5.28	Summarize result from program of capacitor bank 200kVAR	89
5.29	Summarize installation capacitor bank at 50 kVAR, 100kVAR and 200 kVAR per phase in distribution system.	91
5.30	Switching operations of Sokphalaung substation	92
5.31	Network summary of Sokphalaung substation	92
5.32	System losses of Sokphalaung substation	93

5.33	a. Switching operations of Sisakhet substation	94
	b. Network summary of Sisakhet substation	94
	c. System losses of Sisakhet substation	94
5.34	a. Switching operations of Thatlaung substation	96
	b. Network summary of Thatlaung substation	96
	c. System losses of Thatlaung substation	96
5.35	a. Switching operations of Dongnasok substation	97
	b. Network summary of Dongnasok substation	97
	c. System losses of Dongnasok substation	98
5.36	a. Switching operations of Phonthong substation	99
	b. Network summary of Phonthong substation	99
	c. System losses of Phonthong substation	99
5.37	a. Switching operations of ThaNgon substation	101
	b. Network summary of ThaNgon substation	101
	c. System losses of ThaNgon substation	101
5.38	a. Switching operations of Khoksa-at substation	102
	b. Network summary of Khoksa-at substation	102
	c. System losses of Khoksa-at substation	103
5.39	a. Switching operations of switching optimization report all feeders	103
	b. Network summary of switching optimization report all feeders	104
	c. System losses of switching optimization report all feeders	106
5.40	Summarize installation switched in distribution system.	107
5.41	Summarize saving cost of load balancing in distribution system	108
5.42	Economic parameter for optimal capacitor placement	109
5.43	Summarize saving cost of capacitor bank 50kVAR	109
5.44	Summarize saving cost of capacitor bank 100kVAR	110
5.45	Summarize saving cost of capacitor bank 200kVAR	110
5.46	Results of financial analyses of capacitor placement	111
5.47	Results of financial analyses of switching optimization	112

## LIST OF FIGURES

Figure	Page
1.1 The statistic of energy losses for Vientiane capital	2
1.2 The energy demand of Northern, Central and Southern in 2011	2
1.3 Existing single line diagram of the distribution system in Vientiane capital	3
1.4 Outline of technical loss reduction	4
2.1 Distribution Network Model	9
2.2 Model of a line section for single-phase ( $\pi$ ) representation	10
2.3 Transmission line model for calculating line flows and loss	10
2.4 Loss classification	11
2.5 Image of reactive power compensation	18
2.6 Power triangles for a power factor correction capacitor bank	18
2.7 Optimal capacitor placement flowchart	20
2.8 Concept of switching optimization	21
2.9 Simple distribution networks.	22
2.10 Flowchart of the proposed branch exchange algorithm	24
2.11 Concept of seeking appropriate technical loss reduction	25
2.12 Net Present Value (NPV) current of time	26
2.13 Payback period current of time	28
3.1 The growth of power generation in Lao PDR 2005-2010	29
3.2 The Generation Capacity in 2010	30
3.3 The existing hydropower plants in Lao PDR	30
3.4 Existing high voltage transmission line in Lao PDR	31
3.5 Distribution MV( 12.7kV, 22kV, 25kV, 34.5kV and 35kV and LV 0.4 kV	32
3.6 Historical trend of medium voltage system	32
3.7 Historical trend of installed capacity of distribution transformers	33
3.8 The summary of electricity demand forecast for Central Area	34
3.9 Summary the average daily loads of nine substations in Vientiane Capital	36
3.10 MV, Three-phase, three-wire system	38
4.1 Outline of technical loss reduction.	41

4.2	Process of line drawing	42
4.3	Outline of distribution technical loss reduction planning procedure	43
4.4	Process of line drawing	45
4.5	Line tracking and GPS measurement	46
4.6	Image of data transfer	46
4.7	Geometric mean radius (GMR)	48
4.8	Configuration of SC/AC 3/2.75mm conductor	49
4.9	Aspect of standard pole configuration of MV and LV system	50
4.10	Meters for MV feeders on control panels at 115 kV/22kV substation	52
4.11	Overview of the single line diagram of distribution system in Lao PDR	55
4.12	Network and Source Properties Dialog Box	58
4.13	Section properties dialog box(1)	58
4.14	Section properties dialog box(2)	59
4.15	Section properties dialog box(3)	59
4.16	Section properties dialog box(4)	60
4.17	Load allocation dialog box (1)	61
4.18	Load allocation dialog box (2)	61
4.19	Network calculation dialog box	62
4.20	Reports dialog box	63
4.21	Report Window	63
4.22	Switching optimization (1)	64
4.23	Switching optimization (2)	64
4.24	Switching operation results	65
4.25	Optimal capacitor placement dialog box(1)	67
4.26	Optimal capacitor placement dialog box(2)	67
4.27	Results tab for optimal capacitor placement	68
4.28	Load duration curve	68
4.29	Sample of load level setting time (yearly) at each loading level (%)	69
5.1	Location of single phase loads in feeder MSS3.1	75
5.2	Location of single phase loads in feeder MSS8.1	76
5.3	Location of single phase loads in feeder MSS8.2	77
5.4	Location of single phase loads in feeder MSS8.3	78
5.5	Location of single phase loads in feeder MSS9.1	79
5.6	Location of single phase loads in feeder MSS10.2	82

5.7	Location of single phase loads in feeder MSS10.3	83
5.8	Location of capacitor bank of Sokpalaung substration	87
5.9	Location of DS connected point feeders of Sokpalaung substration	92
5.10	Location of DS connected point feeders of Sokpalaung substration	93
5.11	Location of DS connected point feeders of Sisakhet substation	94
5.12	Location of open and close DS connected point feeders of Sisakhet substation	95
5.13	Location of DS connected point feeders of Thatlaung substation	95
5.14	Location of DS connected point feeders of Dongnasok substation	97
5.15	location of open and close DS connected point feeders of Dongnasok substation	98
5.16	Location of DS connected point feeders of Phonthong substation	98
5.17	Location of open and close DS connected point feeders of Phonthong substation	100
5.18	Location of DS connected point feeders of ThaNgon substation	100
5.19	Location of open and close DS connected point feeders of ThaNgon substation	101
5.20	Location of DS connected point feeders of Khoksa-at substation	102
5.21	Location of open and close DS connected point feeders of Khoksa-at substation	103
5.22	Location of open and close DS connected point feeders of Khoksa-at substation	106

## ABBREVIATIONS

ACSR	Aluminum Conductor Steel Reinforced
AAC	All Aluminum conductor
CMU	Chiang Mai University
DC	Direct current
DS	Disconnecting switch
EDL	Electricite du Laos
OCAP	Optimal Capacitor placement
EGAT	Electricity Generating Authority of Thailand
GMR	Geometric Mean Radius
GPS	Global Position System
GMD	Geometric mean distance
IPP	Independent Power Producer
Lao PDR	Lao People's Democratic Republic
LV	Low voltage
MSS 1.1	Feeder 1 of Sokphalaung substation
MSS 2.1	Feeder 1 of Sisakhet substation
MSS 3.1	Feeder 1 of Thatlaung substation
MSS 4.1	Feeder 1 of Dongnasok substation
MSS 5.1	Feeder 1 of Phonthong substation
MSS 6.1	Feeder 1 of Thanaleng substation
MSS 8.1	Feeder 1 of Tha Ngon substation
MSS 9.1	Feeder 1 of Koksa-at substation
MSS 10.1	Feeder 1 of Naxaythong substation
MV	Medium Voltage
NPV	Net Present Value
PC	Personal computer
PDP	Power development plan
IRR	Internal Rate of Return
PF	Power Factor
PIC	Polyethylene Insulated Cable
SAC	Spaced Aerial Cable
