## ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to my dissertation supervisor, Assoc. Prof. Dr. Maneechat Nikornpun, for her support, kindness, and encouragement throughout the periods of my undergraduate and graduate studies, research, and dissertation writing. Her immense knowledge and strong devotion to teaching and researching in the field of plant breeding have provided a model and inspiration for me to delve further into the sciences of plant breeding for the future advancement in this field. My mere expression of thanks does not suffice at all for her great concern, effort, and patience in guiding my dissertation works as well as in giving detailed and constructive comments and advice until I successfully completed my dissertation writing.

I am also deeply grateful to Assoc. Prof. Dr. Dumnern Karladee and Lect. Dr. Weenun Bundithya for their valuable advice for my research works, and to Assoc. Prof. Dr. Danai Boonyakiat and Dr. Charan Ditchaiwong for their kindness to serve in my dissertation examination committee and for their critical comments. I do owe sincere thanks to all academic members of the Department of Plant Science and Natural Resources and the Faculty of Agriculture, Chiang Mai University for imparting their knowledge to me.

My warm thanks are due to Mr. Chokchai Chaimongkol for his coordination and advice in many aspects concerning the preparation and management of my experimentation plots until the trials were successfully completed; to Mr. Akkrarin Krithanakulanan, Mr. Nachayut Chanshotikul and Mr. Krisada Sukwiwat for their help and support during my field experimentation; to the central laboratory workers and master's degree students of Lect. Dr. Weenun Bundithya for their helps in chili genetic evaluation trials; to all field workers whose labor was crucial for the chili experimental plots preparation and maintenance throughout the research period; and to all undergraduate and graduate students who shared the same academic supervisor with me and helped me in many respects in my plant breeding program.

Last but by no means least, I owe my loving thanks to my late paternal grandmother although she could not witness my present success, my father, mother, aunt, and my family for their marvelous support, encouragement, patience, and understanding for my extended study and research time until I finished this work.

Sarujpisit Payakhapaab
