ACKNOWLEDGEMENT

I am grateful to express my sincere gratitude and appreciation to my advisor, Assist Prof. Dr. Ratchada Cressey, for her excellent guidance and continuous discussion. Her support and sincerity will be remembered forever.

I would like to extend my special appreciation to my co-advisor, Prof. Dr. Watchara Kasinrerak, Department of Clinical Immunology, Faculty of Associated Medical Sciences, for his invaluable help and suggestion.

I also thank Dr. Nirush Lertprasertsuke for providing tissue samples and Dr. Supansa Pata for helping with the immunoprecipitation experiment as well as staffs at the Biomedical Technology Research Center, Faculty of Associated Medical Sciences, Chiang Mai University for their valuable advice, comment and support of the equipments for my thesis.

I thank Mr. Manop Pratumwan and staffs working at the division of Clinical Chemistry, Department of Medical Technology, Faculty of Associated Medical Sciences, Chiang Mai University for their support in providing instruments, convenient performing and collection of specimens for this study.

This study was financially sponsored by the Research Chair Grant, National Sciences and Technology Development Agency (Thailand) and National Research Council of Thailand (NRCT).

Many special thanks are also extended to my dear friends in the faculty of Associated Medical Sciences, Chiang Mai University, for their help and warm friendship. In addition, my heart feels thanks to my parents for their love, patience, understanding and encouragement throughout my study.
