ACKNOWLEDGEMENT

During the process of finishing this study, enormous support and selfless help were offered by many colleagues and friends, without whom this work would have been much more difficult.

First of all, I am most grateful for the support, teaching, direction and encouragement of my supervisor, Lect.Dr. Jirawan Kitchaicharoen, for support and help me to finish my thesis from beginning. I also want to express my great gratitude to Prof. Manfred Zeller for agreeing to be my advisor and give me valuable suggestions. Furthermore, I could never forget the facilitation and kindness of Assoc. Prof. Guoqing Zhao, who is working in Yunnan Economic Finance University. He gave me knowledge of model building and software using. I appreciate Yirui Jiang, Chong Li during the data collection period in Yunnan, China and the friendship we shared with each other. Thanks to Heqin Forestry Ministry, without the secondary data they provided me, this master thesis wouldn't be accomplished. I appreciated for attracting my interest in Mathematical Programming. I am also very grateful for the help offered by Dr. Pepijn Schreinemachers when I encountered specific technical problems. Last but not least, I'd like to thank my parents for the patience, confidence and love in me.

Lan Li
