CHAPTER 1 INTRODUCTION	1
1.1 Background	1
1.2 Thailand	4
1.3 Literature Reviews	5
1.4 Research Objectives	10
CHAPTER 2 THEORY	11
2.1 Climate and the climate system	11
2.2 Modeling the climate system	15
2.3 Emission Scenarios of Greenhouse Gases	18
2.4 Cumulus Parameterizations	24
2.4.1 The Betts-Miller scheme	25
2.4.2 The Kain-Fritsch Scheme	25

CHAPTER 3 METHOD 27

3.1 Description of data 27

3.1.1 RCM data 27

3.1.2 Observational data 29

3.2 Extreme Climate Indices 34

3.3 Bias-correction Method 37

3.3.1 Rainfall 38

3.3.2 Temperatures 38

3.4 Cumulus Parameterization 40

CHAPTER 4 CUMULUS PARAMETERIZATIONS 42

4.1 Rainfall 42

4.2 Maximum temperature 43

4.3 Minimum temperature 49

CHAPTER 5 RESULTS 55

5.1 Data validation 55

5.1.1Rainfall validation 55

5.1.1.1Annual average rainfall 55

5.1.1.2 Seasonal biases 57

5.1.1.3 Annual cycle evaluation 61

5.2.2 Maximum temperature validation 64

5.2.2.1 Annual average 64

5.2.2.2 Seasonal biases 67

5.2.2.3 Annual cycle evaluation 73

5.2.3 Minimum temperature validation 74

5.2.3.1 Annual average 74

5.2.3.2 Seasonal biases 77

5.2.3.3 Annual cycle evaluation 83

5.3 Projected changes of extreme rainfall indices 84

5.3.1 Simple Daily Rainfall Intensity Index (SDII) 84

5.3.2 The number of heavy rainfall days (Rnn) 87

5.3.3 Maximum 1-day rainfall amount (Rx1day) 90

5.3.4 Maximum 5-day rainfall amount (Rx5day) 92

5.3.5 The maximum number of consecutive wet days (CWD) 94

5.3.6 The maximum dry spell (CDD) 95

5.4 Projected changes of extreme temperature indices 97

5.4.1 The maximum daytime temperature (Txx) 97

5.4.2 The maximum nighttime temperature (Tnx) 99

5.4.3 The number of summer days (SUnn) 101

5.4.4 The frequency of hot days (Tx90P) 103

5.4.5 The frequency of warm nights (Tn90P) 105

5.4.6 Diurnal temperature range (DTR) 108

CHAPTER 6 CONCLUSIONS 111

LIST OF FIGURES

Figure		Page
2.1	Schematic overview of the components of the global climate system	12
2.2	Schematic illustration of SRES scenarios	22
2.3	Scenarios for GHG emission from 2000 – 2100 and multi-model global averages of temperature changes	23
2.4	Diagram of the models and their complimentarity according to AR4 report	23
3.1	Location of the stations used in the study	30
3.2	Graphical representation of bias-correction method	39
3.3	The study domain that is use in cumulus parameterization	41
4.1	the annual averages of rainfall	44
4.2	The rainfall biases and correlation coefficients between the observations and MM5-RCM	45
4.3	The annual average of maximum temperatures from observation, MM5-RCM using BM, and MM5-RCM using KF scheme	47
4.4	The maximum temperature biases between the observations and MM5-RCM simulations using BM and KF scheme along with the correlation coefficients between the observations and simulations using BM and KF schemes	48
4.5	The annual average of minimum temperatures from observation, MM5-RCM using BM, and MM5-RCM using KF scheme	50

4.6 The minimum temperature biases between the observations and MM5-RCM simulations using BM and KF scheme along with the correlation coefficients between the observations and simulations using BM and KF schemes 51

5.1 The annual average rainfall from the observation and Adj-MM5-RCM in the reference period 1990-1999 56

5.2 The correlation coefficients and the biases between the observed and Adj-MM5-RCM rainfall in the reference period 1990-1999 57

5.3 The average rainfall from the observation and Adj-MM5-RCM during the wet season 58

5.4 The biases between the observed and Adj-MM5-RCM rainfall during the wet season 59

5.5 The average rainfall from the observation and Adj-MM5-RCM during the dry season 60

5.6 The biases between the observed and Adj-MM5-RCM rainfall during the dry season 61

5.7 The mean annual cycle of rainfall in the reference period 1990-1999 for some selected stations 63

5.8 The annual average maximum temperature from the observation and Adj-MM5-RCM 64

5.9 The correlation coefficients and the biases between the observed and Adj-MM5-RCM rainfall 65

5.10 The average maximum temperatures from the observation and Adj-MM5-RCM during the cool season 67

ลิขสิทธิ์มหาวิทยาลัยเชียงใหม่
Copyright© by Chiang Mai University
All rights reserved

5.11 The biases between the observed and Adj-MM5-RCM maximum temperatures during the cool season 68

5.12 The average maximum temperatures from the observation and Adj-MM5-RCMduring the warm season 69

5.13 The biases between the observed and Adj-MM5-RCM maximum temperatures during the cool season 70

5.14 The average maximum temperatures from the observation and Adj-MM5-RCM during the rainy season 71

5.15 The biases between the observed and Adj-MM5-RCM maximum temperatures during the rainy season 72

5.16 The annual cycle evaluation results of maximum temperatures average for all stations at the reference period 1990-1999 73

5.17 The annual average minimum temperatures from the observation and Adj-MM5-RCM 74

5.18 The correlation coefficients and the biases between the observed and Adj-MM5- RCM minimum temperatures 75

5.19 The average minimum temperatures from the observation and Adj-MM5-RCM during the cool season 77

5.20 The biases between the observed and Adj-MM5-RCM minimum temperatures during the cool season 78

5.21 The average maximum temperatures from the observation and Adj-MM5-RCM during the warm season 79

5.22 The biases between the observed and Adj-MM5-RCM minimum temperatures during the warm season 80

ลิขสิทธิ์มหาวิทยาลัยเชียงใหม่

5.23 The average minimum temperatures from the observation and Adj-MM5-RCM during the rainy season 81
5.24 The biases between the observed and Adj-MM5-RCM minimum temperatures during the rainy season 82
5.25 The annual cycle evaluation results of minimum temperature averages for all stations at the reference period 1990-1999 83
5.26 Difference in the average Simple Daily Rainfall Intensity Index (SDII) between 2020-2029 and 1990-1999 periods 86
5.27 Difference in the average number of heavy rainfall days (Rnn) between 2020-2029 and 1990-1999 periods 89
5.28 Difference in the average maximum 1-day rainfall amounts (Rx1day) between the 2020-2029 and 1990-1999 periods 90
5.29 Difference in the average maximum 5-day rainfall amount (Rx5day) between the 2020-2029 and 1990-1999 periods 93
5.30 Difference in the average maximum number of consecutive wet days (CWD) between the 2020-2029 and 1990-1999 periods 94
5.31 Difference in the average maximum number of consecutive dry days (CDD) between the 2020-2029 and 1990-1999 periods 96
5.32 Difference in the maximum daytime temperatures (Txx) between the 2020-2029 and 1990-1999 periods 98
5.33 Difference in the maximum nighttime temperatures (Tnx) between the 2020-2029 and 1990-1999 periods 100
5.34 Difference in the number of summer days (SUnn) between the 2020-2029 and 1990-1999 periods 102
