<b>THAI ABSTRACT</b>	<b>ix</b>
<b>TABLE OF CONTENTS</b>	<b>xii</b>
<b>LIST OF TABLES</b>	<b>xviii</b>
<b>LIST OF FIGURES</b>	<b>xx</b>
<b>ABBREVIATIONS</b>	<b>xxi</b>
<b>CHAPTER 1: RATIONALE OF THE STUDY</b>	<b>1</b>
<b>CHAPTER 2: STUDY 1</b>	<b>5</b>
2.1 Introduction	6
2.1.1 Research questions, purposes and hypotheses	8
2.2 Literature Reviews	10
2.2.1 Mild Cognitive Impairment	10
2.2.2 Cognitive training in individuals with MCI	12
2.2.3 Evidence from Magnetic Resonance Spectroscopy	14
in individuals with MCI	

2.3 Methods	19
2.3.1 Part I: Development of the cognitive training program	19
2.3.2 Part II: Evaluation of the short-term effect of the cognitive training program	20
2.3.2.1 Participants	20
2.3.2.2 Materials	22
2.3.2.3 Independent and dependent variables	23
2.3.2.4 Procedures	24
2.3.2.5 Assessment	25
2.3.2.6 Data analyses	27
2.3.2.7 Data collection location	27
2.4 Results	28
2.4.1 Development of the cognitive training program	28
2.4.2 Evaluation of the short-term effect of the cognitive training program	32
2.4.3 Evidence from cognitive function tests	33
2.4.4 Evidence from neurochemistry biomarkers	36
2.5 Discussion	38
2.5.1 Clinical implications and limitations	42
2.5.2 Conclusion	43

<b>CHAPTER 3: STUDY 2</b>	44
3.1 Introduction	45
3.1.1 Research questions, purposes and hypotheses	47
3.2 Literature Reviews	48
3.2.1 Gait initiation and termination studies	48
3.2.2 Dual-task related gait changes in individuals with cognitive impairment	50
3.2.3 Gait performance related to cognitive function	53
3.2.4 Neuropsychological test for the determination of cognitive profiles	55
3.3 Methods	58
3.3.1 Participants	58
3.3.2 Materials	60
3.3.3 Independent and dependent variables	60
3.3.4 Procedures	61
3.3.4.1 Participant characteristics examination	61
3.3.4.2 Equipment and experimental set up	63
3.3.5 Data analyses	65
3.3.6 Data collection location	67
3.4 Results	67
3.4.1 Participants characteristics	67
3.4.2 Gait parameters during gait initiation	69

3.4.3 Gait variables during gait termination	74
3.5 Discussion	76
3.5.1 Clinical implications and limitations	79
3.5.2 Conclusion	80
<b>CHAPTER 4: STUDY 3</b>	81
4.1 Introduction	82
4.1.1 Research questions, purposes and hypotheses	84
4.2 Literature Reviews	85
4.2.1 Evidence of impaired physical function in individuals with Mild Cognitive Impairment	85
4.2.2 Evidence of impaired executive function is a risk factor of falls	87
4.2.3 Evidence of brain change related to physical decline among older adults	88
4.3 Methods	90
4.3.1 Participants	90
4.3.2 Materials	91
4.3.3 Independent and dependent variables	92
4.3.4 Procedures	92
4.3.4.1 Participant characteristics examination	92
4.3.4.2 Determination of cognitive profile	93
4.3.4.3 Physical function assessment	94

4.3.5 Data analyses	100
4.3.6 Data collection location	101
4.4 Results	102
4.4.1 Participants characteristics	102
4.4.2 Use of MCI diagnosis to predict physical decline	106
4.5 Discussion	108
4.5.1 Clinical implications and limitations	110
4.5.2 Conclusion	111
<b>CHAPTER 5: CONCLUSION OF THE STUDY</b>	112

## LIST OF TABLES

Table		Page
1	Summary of the cognitive training program	28
2	Demographic characteristics of participants in the control and experimental groups	31
3	Comparisons of cognitive skills outcome measures between pre-training and post-training for each group	33
4	Comparison of changed scores (post-training – baseline) of cognitive skills outcome measures between the two groups	34
5	Comparisons of cortical neurochemistry biomarkers at pre-training and post-training for the control group	36
6	Comparisons of cortical neurochemistry biomarkers at pre-training and post-training for the experimental group	37
7	Published norms (Mean $\pm$ SD) and the score at 1.5 and 2.0 below SD for five neuropsychological tests in healthy elders	57
8	Demographic characteristics of the participants	68
9	Mean spatiotemporal parameters during gait initiation under single- and dual-task conditions	70
10	Variability of spatiotemporal parameters during gait initiation under single- and dual-task conditions	72

11	Gait variables during gait termination under single- and dual-task conditions	75
12	Characteristics of the study population, compared between people with greater and less PPA decline over 1 year (PPA; cut-off: median) and MCI and normal at baseline	104
13	Modified poisson regression output of factors associated with physical decline during 1-year follow-up period	107

## LIST OF FIGURES

Figure		Page
1	The hippocampus (H), prefrontal cortex (PFC), entorhinal cortex (E), nigrostriatal system (NS), striatum (Str)	54
2	Coefficient of variation of the first step length (1A), the second step length (1B), the first step width (1C) and the second step width (1D) for the MCI and control groups under single-and dual-task conditions	73
3	MET Transparency	95
4	Lower-limb matching test	96
5	Quadriceps muscle strength test	97
6	Hand reaction time test	98
7	Postural sway test	99

## ABBREVIATIONS

ACC	Anterior Cingulate Cortex
ACTIVE	Advanced Cognitive Training for Independent and Vital Elderly
AD	Alzheimer's Disease
ADL	Activities of Daily Living
BMI	Body Mass Index
Cho	Choline
cm	Centimeter
COM	Center of Mass
COP	Center of Pressure
COV	Coefficient of Variation
Cr	Creatine
FES	Fall Efficacy Scale
GDS	Geriatric Depression Scale
IADL	Instrumental Activities of Daily Living
kg	Kilogram
m	Meter
m/s	Meter per second
min	Minute

mm	Millimeter
MCI	Mild Cognitive Impairment
MET	Melbourne Edge Test
MMSE	Mini-Mental State Examination
MoCA	Montreal Cognitive Assessment
MOL	Method of Loci
MRI	Magnetic Resonance Imaging
MRS	Magnetic Resonance Spectroscopy
mI	Myoinositol
NAA	N-acetylaspartate
NINCDS-ADRDA	National Institute of Neurological and Communicative Disorders and Stroke/Alzheimer's disease and Related Association
PFC	Prefrontal Cortex
PPA	Physiological Profile Assessment
SD	Standard deviation
sec	Second
SEM	Standard Error of Mean
TUGT	Time Up and Go Test
yrs	Years
