TABLE OF CONTENTS

	Page
Acknowledgments	iii
Abstract (Thai)	vi
Abstract (English)	viii
Table of Contents	x
List of Figures	xiv
List of Appendix Tables	xv
List of Appendix Figures	xvii
Chapter 1 Introduction	
1.1 Rationale/Problem Statement	1
1.2 Research Objectives	4
1.3 Expected Outcomes	5
1.4 Scope and Limitation	6
1.5 Hypothesis	7
1.6 Definition of Terms	7
Chapter 2 Theory and Literature Review	
2.1 Introduction of Animal Health Economics	11
2.1.1 What is Economics?	11
2.1.2 What is Animal Health Economics?	12
2.1.3 How is Economics Useful in Controlling Zoonoses Associated with Livestock Production?	13

2.2 Main Contributions of Veterinary Economists to Animal Health Economics Development 14
2.3 Understanding Zoonoses Emergence through EcoHealth-One Health Approach 18
2.4 Understanding Risk Assessment and Probabilistic Risk Assessment 20
2.4.1 Risk Assessment 20
2.4.2 Probabilistic Risk Assessment 21
2.5 Bayesian Belief Network Analysis 22
2.5.1 Introduction 22
2.5.2 Bayesian Statistics 23
2.5.3 Decision Theory 24
2.5.4 Bayesian Influence 25
2.5.5 Building Networks 26
Chapter 3 Research Strategy and Methodology
3.1 Population and Sampling Design 28
3.1.1 Population 28
3.1.2 Sampling Design 28
3.2 Data Collection 29
3.2.1 Institution Survey 29
3.2.2 Household Survey 29
3.2.3 Environmental Survey 30
3.2.4 Focus Groups 30
3.3 Data Analysis 31
3.3.1 Descriptive Statistics 31

3.3.2 Modeling 31

Chapter 4 Research Results

4.1 Trandisciplinary Trichinellosis Risk Framework 46

4.1.1 General Information 46

4.1.2 Animal Husbandry-relevant Trichinellosis Risk Factors 47

4.1.3 Food Chain-relevant Trichinellosis Risk Factors 50

4.1.4 Environment-relevant Trichinellosis Risk Factors 53

4.1.5 Economy-relevant Trichinellosis Risk Factors 55

4.2 Bayesian Belief Network Model of Trichinellosis Risk 58

4.2.1 Institution's Decision to Support Money for Pig Pen Construction 59

4.2.2 Institution's Decision to Encourage People to Stop Consuming Raw or Undercooked Meat 60

Chapter 5 Discussion and Conclusion

5.1 Research Summary 62

5.2 Discussion and Interpretation of Findings 63

5.2.1 Trandisciplinary Trichinellosis Risk Framework 63

5.2.2 Bayesian Belief Network Model of Trichinellosis Risk 66

References 69

Appendices

Appendix A Highland Population Information 78

Appendix B Trichinellosis Risk Framework 85

Appendix C Pig Husbandry-relevant Information 88

Appendix D Human Health-relevant Information 98

Appendix E Abbreviations of Variables in Bayesian Belief Network 109

Appendix F Descriptive Statistics from the Field Study 122

Appendix G Cost Structures and Revenue Streams of Pig Production in Highlands 140

Curriculum Vitae 146

LIST OF FIGURES

Figure		Page
1-1	Life cycle of Trichinellosis	3
2-1	Concept of EcoHealth-One Health Approach	18
3-1	Decision tree representing the institution's decision to encourage people to switch to keep pig in pen	33
3-2	Decision tree representing the institution's decision to encourage people to stop consuming raw or undercooked meat	35

LIST OF APPENDIX TABLES

Table		Page
A-1	The estimated of highland population in Thailand	80
A-2	The estimated of highland population in Chiang Mai, Chiang Rai, and Mae Hong Son	80
C-1	Gains and losses from switching to keep pigs in pen	89
C-2	Utility table of animal health perspective	90
C-3	Scoring rule results of the Trichinella infection in pig	94
C-4	Probability table of the Trichinellosis risk in animal	95
D-1	Economic losses of illness and death per capita from Trichinellosis in human	99
D-2	Utility table of human health perspective	100
D-3	Scoring rule results of the Trichinella risk in human	105
D-4	Probability table of the Trichinellosis risk in human	106
E-1	Abbreviations of variables used in Bayesian Belief Network	110
F-1	General information of the respondents	123
F-2	General information of the pig growers	124
F-3	Knowledge and attitude of the pig growers	125
F-4	Pig production practices	126
F-5	Source of pigs	127
F-6	Pig production modes	128
F-7	General information of food-preparing persons	129

ลิขสิทธิ์มหาวิทยาลัยเชียงใหม่

F-8	Knowledge and attitude of the pig growers	131
F-9	Meat preparation and frequency of meat consumption	132
F-10	Source of meat	133
F-11	Environment-related Trichinellosis risk factors	134
F-12	Financial status of the respondents	136
F-13	Access to medical service of the respondents	138
G-1	Cost structures and revenue streams of pig production in highlands	141

LIST OF APPENDIX FIGURES

Figure		Page
A-1	Location of the highland villages in Chiang Mai, Chiang Rai, and Mae Hong Son	81
A-2	Reported cases of Trichinellosis by sub district (Tambol) during 2003-2012	82
A-3	Visited households in Huai Ma Fueang Village	83
A-4	Visited households in Huai Chan Si Village	84
B-1	Trichinellosis risk framework	86
B-2	Trichinellosis risk framework with belief bars	87
C-1	Trichinella infection risk framework (animal perspective) – Model 1	92
C-2	Trichinella infection risk framework (animal perspective) – Model 2	93
C-3	Trichinella infection risk framework (animal health perspective with decision and utility nodes) – Model 2	96
C-4	Trichinella infection risk framework (animal health perspective with decision and utility nodes) – Model 1, when there is information about the level of risk that pigs will be infected by Trichinella	97
D-1	Trichinellosis risk framework (human perspective) – Model 1	103
D-2	Trichinellosis risk framework (human perspective) – Model 2	104
D-3	Trichinellosis risk framework (human health perspective with decision and utility nodes) – Model 1	107
