<b>ACKNOWLEDGEMENTS</b>	iii
<b>ABSTRACT</b>	v
<b>LIST OF TABLES</b>	xiii
<b>LIST OF FIGURES</b>	xv
<b>LIST OF SYMBOLS</b>	xviii
<b>LIST OF ABBREVIATIONS</b>	xxi
<b>CHAPTER 1 INTRODUCTION</b>	<b>1</b>
1.1 Background	3
1.2 Statement and Significance of the Problem	4
1.3 Research Objectives	7
1.4 Research Questions	7
1.5 Scope and Education/Application Advantages	8
1.6 Definitions	8
1.7 Thesis Outline	9
<b>CHAPTER 2 LITERATURE REVIEW, PRINCIPLE AND THEORY</b>	<b>10</b>
2.1 Literature Review	10
2.1.1 Lean Manufacturing System	11
2.1.2 Business Process Management	13
2.1.3 Supplier Selection	14

2.1.4 A Card-Based System	16
2.2 Principle and Theory	17
2.2.1 Lean Philosophy	17
2.2.2 The Integrated Definition for Function Modeling (IDEF)	19
2.2.3 Multiple Criteria Decision Making	21
2.2.4 Value Network Mapping	25
2.2.5 Workload Control and Cobacabana	28
2.2.6 Simulation	34
2.2.7 Ant Colony Optimization	36
2.2.8 Simulation Optimization	39
<b>CHAPTER 3 RESEARCH DESIGN AND METHODS</b>	41
3.1 A Lean Roadmap	41
3.2 Supplier Selection	48
3.3 A Hybrid Algorithm for Cobacabana	57
3.4 Conclusion	65
<b>CHAPTER 4 A LEAN ROADMAP</b>	67
4.1 The Case Study Information	68
4.2 An Exploratory Analysis in Applying SHEN Model	68
4.3 Statistical Results from Designed Questionnaire	77
4.3 Conclusion	84
<b>CHAPTER 5 SUPPLIER SELECTION IN STOCHASTIC ENVIRONMENTS</b>	86
5.1 Relevant Criteria	86
5.2 Identification the Potential Suppliers	88

5.3 Initial Screening	89
5.4 Determining Normalized Weights	89
5.4.1 The Classical Method	89
5.4.2 The Extent Analysis Method	94
5.5 Stochastic Approach	98
5.6 Ranking Supplier by Using Monte Carlo Simulation	103
5.7 Conclusion	104
<b>CHAPTER 6 A HYBRID ALGORITHM FOR COBACABANA</b>	105
6.1 Value Network Mapping in Workload Control Concept	106
6.2 Exploring Applicability of Cobacabana in Job Shop Environments	111
6.3 A Hybrid Algorithm	121
6.4 Conclusion	129
<b>CHAPTER 7 CONCLUSION AND SUGGESTION</b>	131
7.1 Conclusions	131
7.2 Research Contributions	136
7.3 Limitations	137
7.4 Suggestions for Future Work	139
<b>REFERENCES</b>	140
<b>APPENDICES</b>	156
Appendix A	157
Appendix B	163
Appendix C	168
Appendix D	170

Appendix E	172
Appendix F	177
Appendix G	183
Appendix H	192
Appendix I	194
<b>CURRICULUM VITAE</b>	198

## LIST OF TABLES

<b>Table</b>		<b>Page</b>
3.1	Exploratory factor analysis versus confirmatory factor analysis	43
3.2	Definition and aim of validity	44
3.3	Summary of each method for assessing reliability	45
3.4	Confirmatory factor analysis notations	46
3.5	TFNs of linguistic terms for the importance weights and ratings	50
3.6	Random consistency index based on matrix size	52
4.1	Activities Summary of shop floor system from the case study	76
4.2	Principle 4 “Simplify the shop floor”	78
4.3	Results from seven respondents for principle 11	78
4.4	Raw data for Cronbach’s alpha calculation	79
4.5	Factor loading and Cronbach’s alpha of all principles	81
5.1	Summary of the criteria for a material supplier selection from literature	87
5.2	Linguistic evaluation data related to candidate suppliers	89
5.3	The fuzzy evaluation matrix of the main criteria	90
5.4	Transforming results from Table 5.3	90
5.5	Normalization weight of main criteria	91
5.6	Composite priority weights for sub-criteria	92
5.7	Ranking of sub-criteria	93
5.8	Normalized local weights of candidate alternatives in each sub-criterion	94
5.9	Application of the classical fuzzy AHP for material supplier selection	94
5.10	Preparation data for the fuzzy synthetic extent value	95

5.11	Global weights of sub-criteria	97
5.12	Sub-criteria positioning status	97
5.13	Application of the extent analysis method on fuzzy AHP	98
5.14	Variances of relative local weights	100
5.15	Statistics display for global weights	102
5.16	Summary of statistic and the simulation results for decision alternatives	103
6.1	Jaccard similarity matrix	110
6.2	Time line of selected products	115
6.3	Operation processing time in Erlang-2 distributed (unit: minute)	116
6.4	Summary of simulated model characteristics	117
6.5	Processing data of product two	118
6.6	Initial parametric setting	122
6.7	The simulation results for lead time by using ten replications	123
6.8	The simulation results for delivery reliability by using ten replications	124
6.9	WIP comparisons of the proposed approach and EDD (EA.)	129
7.1	Comparison results of the proposed approach and EDD	136
7.2	Thesis contributions	138

## LIST OF FIGURES

<b>Figure</b>		<b>Page</b>
1.1	Relationship between product variety and production quantity	3
1.2	Quantity and ratio of SMEs in 2008	4
1.3	Porter's five force	5
2.1	An activity box	20
2.2	The hierarchy of IDEF0	20
2.3	The analytic hierarchy process (AHP)	22
2.4	Membership function for triangular fuzzy numbers	23
2.5	An example of enhanced flow process chart (FPC)	26
2.6	Modified multi-product process chart	26
2.7	Part group dendrogram	27
2.8	VNM at level 1	28
2.9	VNM at level 2	28
2.10	Lead time components	29
2.11	Input and output control in WLC concept	30
2.12	Comparison classical workload control concepts	30
2.13	Available release card display on the actual shop floor	32
2.14	Acceptance card display on the actual pool waiting time	33
2.15	Principle of simulation optimization	39
3.1	Scale used in Likert scale questions	42
3.2	Procedure diagram of fuzzy stochastic AHP	49
3.3	An intersection between $M_1$ and $M_2$	53
3.4	Overview of fuzzy AHP treatment	54
3.5	Overview of a stochastic approach	55

3.6	The simplicity decision problem	55
3.7	An overview of the hybrid algorithm for Cobacabana	57
3.8	A schematic diagram of the first phase	58
3.9	Algorithm of the simulation model	60
3.10	Graphical representation of parameter space	64
3.11	An overview of Chapter two and Chapter three	66
4.1	Histogram of reliable delivery problem	69
4.2	An overview activity model, A0	69
4.3	A detailed activity in A0 model	70
4.4	Receive order from R&D department, A1	71
4.5	Check stock and create production plan, A2	72
4.6	Consider purchase requisition by purchasing officer, A3	73
4.7	Store incoming material at warehouse, A4	73
4.8	Produce tool and product prototype model, A5	74
4.9	Structure equation model for MTO	77
4.10	Factor loadings of observed components	79
4.11	Validity and reliability of Principle 11	80
4.12	The scree plot of Principle 11	81
5.1	Selection criteria of the material supplier selection problem	88
5.2	Overall comparison of material supplier rating	99
5.3	Range of global weights for the classical method	102
5.4	Range of global weights for the extent analysis	102
6.1	Flows in (A) the pure job shop and (B) the pure flow shop	105
6.2	PQC analysis matrix	107
6.3	The multi-product process chart	108
6.4	A sample of enhanced flow process chart	109
6.5	Part family dendrogram	110
6.6	VNM at level 1	112
6.7	VNM at level 2 for component family 1	113
6.8	Operation flow of selected products	114
6.9	Histogram and the data characteristics of the due date allowance	116

6.10	The user specified report for product 2	118
6.11	Workloads limit analysis	119
6.12	Workstation utilization levels	119
6.13	Release period length analysis	120
6.14	Number of requested release cards at day 10 (each card equals 10%)	120
6.15	Number of requested acceptance cards at day 10 (each card equals one-tenth of a day)	121
6.16	Reports from ten replications	125
6.17	Reports from three hundred replications	126
6.18	Sample results via Antcoba	126
6.19	Results from workload ratio and release period length relate to 2 and 2	127
6.20	EDD ten replications	127
6.21	EDD seventeen replications	128
6.22	Comparison results of the proposed model and EDD	128
7.1	Overview of an essentially proposed algorithm	132
7.2	Summarized of further researches	139

## LIST OF SYMBOLS

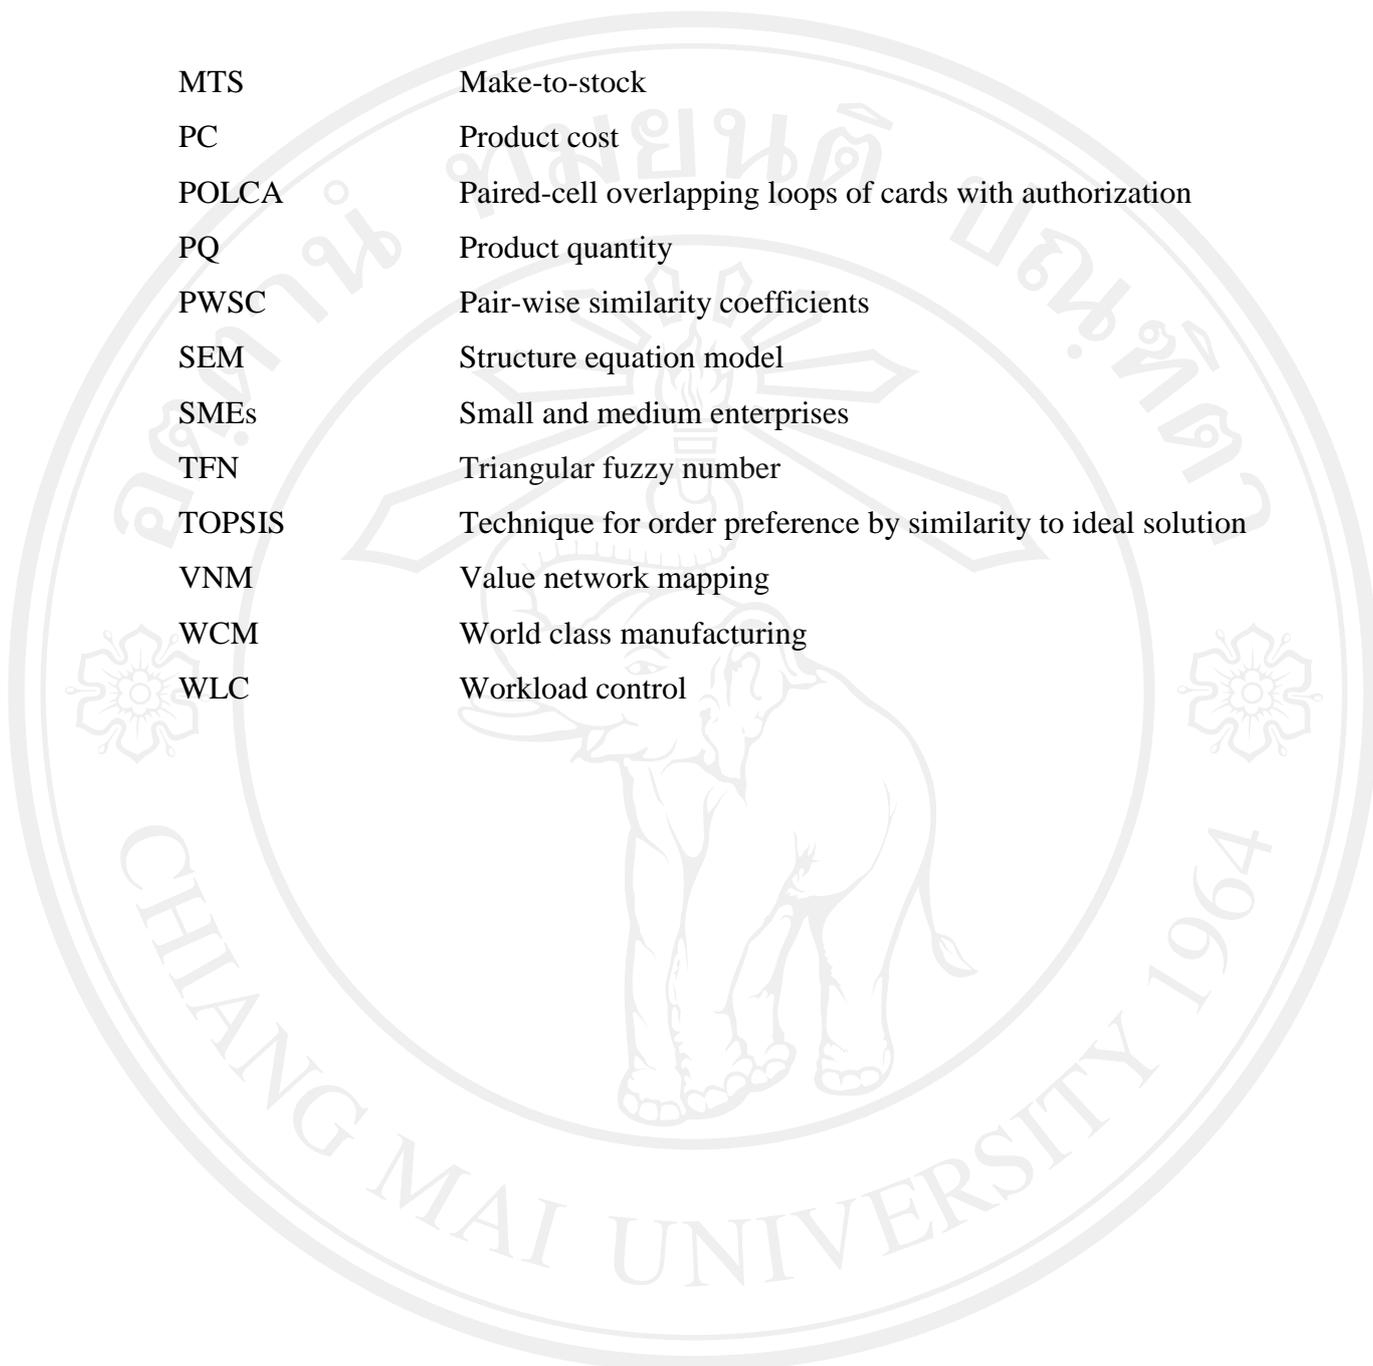

Symbol	Meaning
$\tilde{A}$	a fuzzy judgment matrix
$A_i$	a number of machines used by part ' $i$ ' only
$A_{js}$	a number of acceptance card
$a_{ij}$	an actual value of the $i$ th alternative in terms of the $j$ th criterion
$B_j$	a number of machines used by part ' $j$ ' only
$C_{js}$	an amount of each job contribution
$d$	an ordinate of the highest intersection point
$d_j^{\min}$	a minimal delivery time
$g$	the objective function
$h$	a pre-specified desired half width
$h_0$	the half width from initial replications
$I(t)$	1 at the specified interval, 0 otherwise
$I$	1 if the decision rule is satisfied and equals 0 otherwise
$J$	a set of all existing jobs
$K$	a number of components
$\tilde{L}_{st}^D$	workload norms at station $s$
$l$	a lower value of the support of $M$
$M_i^j$	triangular fuzzy numbers
$m$	a modal(mid) value
$N$	a number of criteria
$N_i^k$	a feasible neighborhood of ant
$n$	a size of the matrix

$n$	a number of jobs
$n_0$	a number of initial replications
$O_s^{*D}$	a maximum output of station $s$ during the planned station throughput time
$P_{js}$	a processing time of job $j$ at station $s$
$R_i$	a rank of the $i$ th alternative
$S_{ij}$	a basis of the pair-wise similarity coefficients
$T_i^f$	the floor time
$T_i^l$	the lead time
$T_i^p$	the pool time
$T_j^{*P}$	an estimated waiting time in the order pool
$T_s^{*D}$	planned value at station $s$
$t_{js}^C$	a time of completion of job $j$ at station $s$
$t_j^R$	the times of release of job $j$
$U_{js}$	a set of stations in the routing of $j$ “up to and including” station $s$
$u$	an upper value of the support of $M$
$V_i$	a fuzzy eigen vector
$W$	a nonfuzzy number
$\tilde{W}$	a weight vector
$W_{i,j}^{k,l}$	relative weights of element $i$ at layer $j$ with respect to element $k$ at layer $l$ .
$w_j$	a weight or importance of the $j$ th criterion
$w_{ij}$	a consistent judgment ratio formed from the priority vector $w = (w_1, w_2, \dots, w_n)$ computed from $A = [a_{ij}]_{m \times n}$ and $y_{ij} = \ln(a_{ij}/w_{ij})$
$X_{ij}$	a number of machines used by both part ‘ $i$ ’ and part ‘ $j$ ’
$x_i$	observed variables
$x_{jm}$	a level of criteria $m$ for choice alternative $j$

$Y_{ij}$	a number of machines that are used neither by part ‘ $i$ ’ nor by part ‘ $j$ ’
$y_m$	the smallest level of the attribute
$\rho$	the pheromone evaporation rate
$\sigma^2$	the variance of error
$\sigma_X^2$	the variance of the observed total test scores
$\sigma_{w_i}^2$	the variance of the local weight
$\sigma_{Y_j}^2$	the variance of component $i$ for the current sample of persons
$\sigma_{i,j}^{k,l}$	standard deviation of element $i$ at layer $j$ with respect to element $k$ at layer $l$
$\xi_i$	latent variables or common factors
$\delta_i$	unique factors
$\delta_i$	the due date
$\lambda_{ij}$	factor loadings
$\lambda_{\max}$	a reference index to screen information for a consistency ratio (CR) calculation of the estimated vector
$\Phi_{ij}$	factor variance and covariance
$\Theta$	error variance and covariance
$\phi$	the vector of input parameters
$\gamma_i$	the tardy delivery date
$\mathcal{G}_i$	the early delivery date
$\tau_{ij}$	an initial pheromone trails
$\eta_{ij}$	a heuristic value
$\alpha$	the relative influence of the pheromone trail
$\beta$	the heuristic information

## LIST OF ABBREVIATIONS

<b>Abbreviation</b>	<b>Meaning</b>
ACO	Ant colony optimization
AHP	Analytic hierarchy process
ANP	Analytical network process
AS	Ant system
C.I.	Confidence interval
CFA	Confirmatory factor analysis
CNC	Computerized numerical control
Cobacabana	Control of balance by card-based navigation
CONWIP	Constant work in process
CR	Consistency ratio
DM	Decision maker
EDD	Earliest due date
EFA	Exploratory factor analysis
ELECTRE	Elimination and choice translating reality
FAHP	Fuzzy analytical hierarchy process
FMRG	Fast multiple recursive generator
FPC	Flow process chart
FST	Fuzzy set theory
GDP	Gross domestic product
HVLV	High variety, low volume
IDEF	Integrated definition for function modeling
MCDM	Multiple criteria decision making
MMPPC	Modified multiple-product process
MPPC	Multiple-product process chart
MTO	Make-to-order

MTS	Make-to-stock
PC	Product cost
POLCA	Paired-cell overlapping loops of cards with authorization
PQ	Product quantity
PWSC	Pair-wise similarity coefficients
SEM	Structure equation model
SMEs	Small and medium enterprises
TFN	Triangular fuzzy number
TOPSIS	Technique for order preference by similarity to ideal solution
VNM	Value network mapping
WCM	World class manufacturing
WLC	Workload control
