Abstract (in English)	iv
Abstract (in Thai)	vi
Table of Contents	viii
List of Tables	x
List of Figures	xiii
CHAPTER 1 Introduction and Literature Review	1
1.1 Reforestation in Northern Thailand	1
1.2 <i>Pinus kesiya</i> Plantations in Highland Watershed of Northern Thailand	2
1.3 Biomass and Carbon sequestration	4
1.4 Soils and Nutrient Cycling in Forest Ecosystems	6
1.4.1 Forest Soils	6
1.4.2 Soil Carbon Stocks	7
1.4.3 Nutrient Cycling in Forest Ecosystems	8
1.5 Economics Valuation of Ecosystem Services	10
1.5.1 Ecosystem Services	10
1.5.2 Valuing ecosystem services	11
1.5.3 Valuation techniques	11
1.5.4 Economic Valuation of Tropical Forest in Thailand	12
1.6 Research Objectives	13
CHAPTER 2 Plant Communities, Wood Production, Biomass Carbon and Nutrient Storages in Ecosystems of <i>Pinus kesiya</i> Plantations, Adjacent Fragmented Forests and Montane Forest	14
2.1 Introduction	15
2.2 Research Area	16
2.2.1 Boakaew Watershed Management Station	16
2.2.2 Doi Inthanon National Park	19
2.3 Materials and Methods	19
2.3.1 Vegetation Sampling	19
2.3.2 Calculation of Ecological Parameters	21
2.3.3 Calculation of Tree Volume	22
2.3.4 Calculation of Tree Biomass	22
2.3.5 Calculation of Stored Nutrients	24
2.4 Results	24
2.4.1 Plant Community Analysis	24
2.4.2 Tree Volume and Wood Production	36
2.4.3 Tree Biomass	42
2.4.4 Carbon and Nutrients	50
2.5 Discussion	61

TABLE OF CONTENTS (CONTINUED)

	Page
CHAPTER 3 Carbon and Nutrient Accumulations in Ecosystems of <i>Pinus kesiya</i> Plantations, Adjacent Fragmented Forests and Climax Montane Forest	63
3.1 Introduction	63
3.2 Materials and Methods	65
3.2.1 Soil Sampling	65
3.2.2 Soil Analysis	65
3.2.3 Nutrient Accumulations in Soils	66
3.2.4 Biomass and Nutrients in Organic Layers	66
3.3 Results	66
3.3.1 Soil Characteristics	66
3.3.2 Carbon and Nutrient Storages	106
3.3.3 Forest Floor Compartment	112
3.3.4 Ecosystem Carbon and Nutrient Storages	117
3.4 Discussion	120
CHAPTER 4 Economic Valuation of Wood Production, Carbon and Nutrient Storages in Ecosystems of Pine Plantations, Adjacent fragmented Forests and Climax Montane Forest	122
4.1 Introduction	122
4.2 Materials and Methods	123
4.2.1 Evaluation of Wood Production	124
4.2.2 Evaluation of Biomass Carbon and Nutrient Stocks	124
4.3 Results	126
4.3.1 Valuation of Wood Production	126
4.3.2 Valuation of Carbon and Nutrient storages	128
4.3.3 Valuation of Ecosystem Carbon and Nutrient storages	137
4.3.4 Total Ecosystems Economic Valuation	138
4.4 Discussion	142
CHAPTER 5 Conclusions and Recommendations	144
References	153
Appendices	168
Appendix A	169
Appendix B	194
Appendix C	214
Appendix D	230
Curriculum vitae	235

LIST OF TABLES

Table	Page	
2-1	Plantation areas of Boakaew Watershed Management Station	16
2-2	Quantitative data of plant communities in a series of <i>Pinus kesiya</i> plantations	25
2-3	Quantitative characteristics of tree species in fifteen adjacent fragment forests	28
2-4	Quantitative data of plant communities in the adjacent fragmented forests	30
2-5	Quantitative characteristics of tree species in the climax montane forest	32
2-6	Growth of <i>P. kesiya</i> and succession trees in a series of pine plantations of 21 age-class stands	37
2-7	Stem Volume of <i>P. kesiya</i> and succession trees in a series of pine plantations of 21 age-class stands	38
2-8	Timber volumes of <i>P. kesiya</i> with different timber quality and stem-girth classes in 21 age-class plantations	39
2-9	Timber volumes of succession trees with different timber quality and stem-girth classes in 21 age-class plantations	40
2-10	Stem and timber volumes of the fifteen adjacent fragmented forests with different timber quality and stem-girth classes	41
2-11	Stem Volume and timber volumes of climax montane forest with different timber quality and stem-girth classes	41
2-12	Biomass of pine trees and succession trees in a series of pine plantations	42
2-13	Tree biomass in adjacent fragmented forests	44
2-14	Biomass of tree species in the adjacent fragmented forests	46
2-15	Biomass of tree species in the climax montane forest	48
2-16	Stored biomass nutrients of pine trees in a series of pine plantations	53
2-17	Stored biomass nutrients of succession trees in a series of pine Plantations	54
2-18	Total biomass nutrients of pine and succession trees in a series of pine Plantations	55
2-19	Variations of stored carbon and nutrients in biomass of tree species in fifteen adjacent fragmented forests and the climax montane forest	59
3-1	Some physical properties in soil profiles under pine plantations	69
3-2	Some chemical properties in soil profiles under pine plantations	74
3-3	Extractable bases and acidity, cation exchange capacity and base saturation in soil profiles under pine plantations	76
3-4	Assessment of fertility levels in soil profiles under pine plantations	77
3-5	Topography and soil profile development in five adjacent fragmented forests	78
3-6	Some physical properties in soil profiles under adjacent fragmented forests	86

LIST OF TABLES (CONTINUED)

Table	Page
3-7 Some chemical properties in soil profiles under adjacent fragmented forests	91
3-8 Extractable bases and acidity, cation exchange capacity and base saturation in soil profiles under adjacent fragmented forests	92
3-9 Assessment of fertility levels in soil profiles under adjacent fragmented forests	93
3-10 Topography and soil profile development in climax montane forest	94
3-11 Some physical properties in soil profiles under climax montane forest	99
3-12 Some chemical properties in soil profiles under climax montane forest	103
3-13 Extractable bases and acidity, cation exchange capacity and base saturation in soil profiles under climax montane forest	104
3-14 Assessment of fertility levels in soil profiles under climax montane forest	105
3-15 Stored carbon and nutrients in soils under different age pine plantations	107
3-16 Stored carbon and nutrients in soils under the adjacent fragmented forests	109
3-17 Stored carbon and nutrients in soils under the climax montane forest	111
3-18 Nutrient concentrations (% dry weight) in litter on forest floor of pine plantations	113
3-19 Distribution of dry matter and nutrient contents in litter on forest floor of pine plantations	113
3-20 Distribution of dry matter and nutrient content in litter on forest floor of the adjacent fragmented forests	114
3-21 Nutrient contents (% dry weight) in litterfall and forest floor of the climax montane forest	115
3-22 Distribution of dry matter and nutrient amounts in litterfall and forest floor of the climax montane forest	116
3-23 Carbon and nutrient storages in ecosystems of pine plantations, adjacent fragmented forests and climax montane forest	119
4-1 Unit costs of fertilizers in Thailand, 2011	125
4-2 Value of wood production of <i>Pinus kesiya</i> with different stem-girth classes in 21 age-class plantations	126
4-3 Value of wood production of succession trees with different timber quality and stem-girth classes in 21 age-class pine plantations	127
4-4 Total value of wood production in 21 age-class plantations	127
4-5 Value of wood production with different timber quality and stem-girth classes in fifteen adjacent fragmented forests	129
4-6 Value of wood production with different timber quality and stem-girth classes in climax montane forests	129
4-7 Valuation of carbon and nutrient storages in pine and succession tree of pine plantations	130
4-8 Valuation of carbon and nutrient storages in litter on forest floor of pine plantation	132

LIST OF TABLES (CONTINUED)

Table	Page
4-9 Valuation of carbon and nutrient storages in 1.60 meter soil profile of pine plantation	132
4-10 Valuation of biomass carbon and nutrients in adjacent fragmented forests	134
4-11 Valuation of carbon and nutrient storages in forest floor of adjacent fragmented forests	135
4-12 Valuation of carbon and nutrient storages (available forms) in 1.60 meter soil profiles of adjacent fragmented forests	135
4-13 Valuation of biomass carbon and nutrients in climax montane forest	136
4-14 Valuation of carbon and nutrient storages in forest floor of climax montane forests	136
4-15 Valuation of carbon and nutrient storages (available forms) in 1.60 meter soil profiles of climax montane forest	137
4-16 Value of carbon and nutrients storages in ecosystems of pine plantations, adjacent fragmented forests and climax montane forest	139
4-17 Value of wood production, carbon (voluntary market) and nutrient storages in ecosystems of pine plantations, adjacent fragmented forests and climax montane forest	140
4-18 Value of wood production, carbon (carbon market) and nutrient storages in ecosystems of pine plantations, adjacent fragmented forests and climax montane forest	140

LIST OF FIGURES

Figure		Page
2-1	Location of study areas at Boakaew Watershed Management Station and Doi Inthanon national park	17
2-2	Location of pine plantations areas and adjacent fragmented forests at Boakaew Watershed Management Station	18
2-3	Location of a 15 ha permanent plot at Doi Inthanon natural park	20
2-4	Tree densities of <i>Pinus kesiya</i> and succession broad-leaved trees with different stem-girth classes in 21 age-class plantations	26
2-5	Total forest biomass in a series of pine plantations	43
2-6	Total forest biomass in fifteen adjacent fragmented forests	44
2-7	Stored biomass nutrients in a series of pine plantations	52
2-8	Stored biomass nutrients in fifteen adjacent fragmented forest and the climax montane forest	58
3-1	Study site and soil profile of pedon 1 in the adjacent fragmented forest	79
3-2	Study site and soil profile of pedon 2 in the adjacent fragmented forest	80
3-3	Study site and soil profile of pedon 3 in the adjacent fragmented forest	81
3-4	Study site and soil profile of pedon 4 in the adjacent fragmented forest	82
3-5	Study site and soil profile of pedon 5 in the adjacent fragmented forest	83
3-6	Study site and soil profile of pedon 6 at upper slope site in the climax montane forest	95
3-7	Study site and soil profile of pedon 7 at middle slope site in the climax montane forest	96
3-8	Study site and soil profile of pedon 8 at lower slope site in the climax montane forest	97
3-9	Percentages of carbon stocks in ecosystems of pine plantations	117
3-10	Percentages of carbon stocks in ecosystems of adjacent fragmented forests and climax montane forest	118
4-1	Value of wood production, carbon (voluntary market) and nutrient storages in forest ecosystems	141
4-2	Value of wood production, carbon (carbon market) and nutrient storages in forest ecosystems	141
