ACKNOWLEDGEMENT

First and foremost, I am very grateful to my regards to all members of my family, who stand with me in all the good and bad times throughout my whole life, I always realize their endless affection and unconditional support.

I would like to express my great appreciation to my advisor; Assoc.Prof.Dr.Sumpun Chaitep and my co-advisor Asst.Prof.Dr.Wasan Jompakdee and Asst.Prof.Dr.Wiwat Klongpanich for give me an opportunity to carry out this doctoral research work. I am grateful for their continuous support, kind suggestions, valuable guidance and encouragement. My sincere gratitude goes to my chairperson and my external committee. Thank you very much for their help, kind suggestion and fruitful discussion. Additionally, I am thank you to all lecturers and staff in the Faculty of Engineering, Chiang Mai University for teaching and giving me useful discussions.

Special thanks go to Dr.Damorn Bundhurat, Chiang Mai University, Dr.Thipjak Na Lampang, National Metal and Materials Technology Center (MTEC) member of National Science and Technology Development Agency (NSTDA) and Dr.Pipatpong Wattanawanyoo, Rangsit University for assisting me during the whole period of this work. Their advice and constant availability even in the abnormality of time has been essential and this work owes much to them.

I am gratefully acknowledged to Graduate School, Chiang Mai University and Energy Policy and Planning Offices (EPPO), Ministry of Energy who made this work possible and financial support, and this project wouldn't have been possible either without N.K. Mechanical Ltd. and the care they took to preparing the test rig in research project and the opportunities he gave me.

Lastly, special thanks go to staffs, friends and colleagues in PARA laboratory and National Science and Technology Development Agency, Northern Network. Thank you for their help and enjoyable time.

Pattanachok Saiai
