Abstract in Thai	iv
Abstract in English	vi
List of Tables	xii
List of Figures	xiii
List of Abbreviations	xv
Chapter 1 Introduction	1
1.1 Atmospheric deposition	1
1.1.1 Wet deposition	2
1.1.2 Dry deposition	2
1.2 Sampling methods for atmospheric dry deposition	3
1.2.1 Four-stage filter pack	3
1.2.2 Leaf-washing method	4
1.2.3 Comparison four-stage filter pack and leaf-washing methods	4
1.3 Research objectives	8
Chapter 2 Methodology	9
2.1 Apparatus, chemicals, equipment and instrument	9
2.1.1 Apparatus	9
2.1.2 Chemicals	10
2.1.3 Equipment	10
2.1.4 Instrument	11
2.2 Monitoring of atmospheric dry deposition by four-stage filter pack	11

2.2.1	Sampling site	11
2.2.2	Sampling method and sample preparation	13
	1) Filter pack sampling system	13
	2) Preparation of first filter (F0)	16
	3) Four-stage filter pack installation	17
	4) Sample extraction	17
2.3	Monitoring of atmospheric dry deposition by leaf-washing method	17
2.3.1	Study area	17
2.3.2	Selection of sampling tree	18
2.3.3	Selection of sampling leaves	21
2.3.4	Sampling method	21
	1) Sampling duration	21
	2) Particulate and collection from leaves	21
2.3.5	Chemical analysis of samples	24
	1) Electro-conductivity (EC) measurement	24
	2) pH measurement	24
2.3.6	Measurement of leaf area	24
2.4	Analysis of ion content in dry deposition samples by Ion chromatography	26
2.4.1	Eluent preparation	27
	1) Eluent preparation for cation analysis	27
	2) Eluent preparation for anion analysis	28
2.4.2	Preparation of standard solution and construction of standard calibration curve	28
2.4.3	Determination of Limit of detection (LOD) and limit of quantification (LOQ) of ions analyzed by Ion chromatography	29
2.4.4	Accuracy of ion analysis by Ion chromatography	29
	1) Repeatability	29
	2) Reproducibility	29
2.5	Comparison of data obtained from four-stage filter pack and leaf-washing methods by statistic	30

Chapter 3 Results and discussion	31
3.1 Validation of ions analysis by Ion chromatograph (IC)	31
3.1.1 Chromatograms and calibration curves of ions	31
3.1.2 Limit of detection (LOD) and limit of quantification (LOQ)	35
3.1.3 Accuracy of ion analysis by Ion chromatography	36
1) Repeatability	36
2) Reproducibility	37
3.2 Analysis of atmospheric particulates deposition by four-stage filter pack	38
3.2.1 Atmospheric particulates deposition amount	38
3.3 Analysis of atmospheric particulates deposition by leaf-washing method	41
3.3.1 Leaf area of jambolan plum tree	41
3.3.2 Measurement of acidity and alkalinity (pH) and electro-conductivity (EC)	43
3.3.3 Particulate deposition amount	44
1) Effect of sampling direction	44
2) Effect of seasonal for sampling collection	50
3.4 Comparison of atmospheric particulates deposition by four-stage filter pack and leaf-washing methods	52
3.4.1 Particulate deposition amount from both methods	52
3.4.2 The relative percentage of ion	55
3.4.3 Ion pair correlation	57
1) Correlation between leaf-washing and four-stage filter pack method	57
2) Correlation between four-stage filter pack and leaf-washing method with meteorological conditions	59
3.5 Factor of rain precipitation and PM10 concentrations that influence to the dry deposition amount in atmosphere	61
Chapter 4 Conclusion	63
References	65

Appendix	69
Appendix A	70

LIST OF ABBREVIATIONS

DIW	Deionized water
EANET	Acid Deposition Monitoring Network in East Asia
EC	Electro-Conductivity
IC	Ion Chromatography
L	Leaf litter
LOD	Limit of Detection
LOQ	Limit of Quantification
m ²	Square meter
mm ²	Square millimeter
mS/m	Milli Siemens per metre
n	Number of sample
ND	Not detected
pH	Acidity and alkalinity
PM10	Particulate Matter, aerodynamic diameter $\leq 10 \mu\text{m}$
r	Correlation coefficient
R ²	Coefficients of determination
SD	Standard Deviation
