## ACKNOWLEDGEMENT

This dissertation has only been possible due to the great encouragement and support from many wonderful persons and institutions throughout my doctoral study and the dissertation process. I would like to express my sincere gratitude and appreciation to the following brilliant individuals and organization for their invaluable contribution and support.

My deep sincere gratitude and appreciation to my thesis major advisor, Assistant Professor Dr. Sirirat Panuthai, I would like to express my deep appreciation for her continuing encouragement, insightful intellectual guidance, and invaluable advice throughout various processes in my dissertation and doctoral program. I extend my sincerest appreciation to my co-advisors, Associate Professor Dr. Thanaruk Suwanprapisa and Assistant Professor Dr. Totsaporn Khampolsiri for their suggestions, and guidance during my years of conducting dissertation. I also sincerely extend my gratitude and appreciation to all my doctoral instructors in Faculty of Nursing, Chiang Mai University to greatly provide my academic learning experience and encourage me to develop potential capabilities through my doctoral study.

I would also like to extend my sincere thanks to Associate Professor Dr. Darawan Tapinta, Associate Professor Dr. Kasara Sripichyakan and Assistant Professor Dr. Porntip Malathum, my examining committee members, for their intellectual suggestions and recommendations to strengthen this dissertation.

I wish to greatly thank to Mrs. Sultan Baliz Erkoc and her colleagues at Public Health Department, Medical Faculty, Eskisehir Osmangazi University for giving me permission to use their instruments. I would like to extend my thankfulness to my back translator, Dr. Pimpimol Wongchaiya, at Boromarajonani College of Nursing, Phayao for her helpful assistance for back-translation of instrument. I would also like to extend my special thanks to Lecturer Jakapop Thatsuwana who gave me great suggestions for data analysis using structure equation modeling through the LISREL statistical program.

I wish to give special thanks to all the older adults with hypertension for their willingness to participate in this study and also generously share their valuable information. I would also like to extend my special thanks to the cooperation and assistance in along the process of data collection from nurses, and other health care teams at the five hypertension clinics, Dok Kham Tai Hospital, Pong Hospital, Chun Hospital, Mae Chai Hospital, and Chiang Muan Hospital.

I am truly indebted to my director and colleagues at Boromarajonani College of Nursing, Phayao, for their contribution and allowing me to do full time study. My sincere gratitude goes to Phaboromarajchanok Institute for Health Workforce Development at Office of Permanent Secretary of the Thailand Ministry of Public Health for the support of a scholarship for my study.

Specifically, this dissertation would not have been completed without support and encouragement from my family. I am deeply grateful to my beloved parents and my younger brother for their whole-heart encouragement, great support and wishing me success in my achievement of a doctoral degree. My appreciation is extended to my doctoral classmates and friends for sharing valuable knowledge, experience, friendship, and compassionate assistance during my study.

Arunya Namwong
