Chapter 1 Introduction	1
Chapter 2 Literature review	4
2.1 CO ₂ emissions and global climate conditions	4
2.2 CO ₂ sequestration by microalgae	7
2.3 Microalgae and biodiesel production	9
2.4 Microalgae cultivation for CO ₂ capture and biodiesel production	17
Chapter 3 Effect of CO ₂ concentrations on growth, lipid production and CO ₂ fixation of microalgal consortium	28
3.1 Introduction	28
3.2 Material and methods	29
3.3 Results and discussions	34

Chapter 4 Effect of different CO ₂ aeration rates on CO ₂ fixation efficiency of microalgal consortium	45
4.1 Introduction	45
4.2 Material and methods	46
4.3 Results and discussions	48
Chapter 5 Cultivation of microalgal consortium using exhaust gas for CO ₂ mitigation and lipid production	57
5.1 Introduction	57
5.2 Material and methods	58
5.3 Results and discussions	61
Chapter 6 Effects of season and CO ₂ supplementation on the cultivation of microalgal consortium in an outdoor open system for lipid production and CO ₂ mitigation	68
6.1 Introduction	68
6.2 Material and methods	69
6.3 Results and discussions	72
Chapter 7 General discussions and conclusions	88
7.1 General discussions	88
7.2 Conclusions	90
7.3 Recommendations	92
References	93

Curriculum Vitae	128

LIST OF TABLES

Table	Page
2.1 The main greenhouse gases and their anthropogenic source and GWP	4
2.2 Comparison of various oleaginous microorganisms for oil production	9
2.3 Lipid content and biomass productivities of various species of microalgae	10
2.4 Oil yields of various sources for biodiesel production	15
2.5 Properties of biodiesel from microalgae compared with conventional diesel fuel and ASTM biodiesel standard	16
2.6 CO ₂ tolerance of various microalgal species	19
3.1 Lipid content of MC under different CO ₂ concentrations	38
3.2 Carbon content and CO ₂ fixation rate of the MC under different CO ₂ concentrations	40
4.1 Lipid contents of MC under different CO ₂ aeration rates	51
4.2 Carbon content, CO ₂ fixation rate and CO ₂ capture of the MC under different CO ₂ aeration rates	54
5.1 Composition of exhaust gas from a power generator	59
5.2 Lipid contents of the MC under exhaust gas condition compared with the ambient air condition	65
5.3 Carbon content, CO ₂ fixation rate and CO ₂ capture of the MC under exhaust gas condition compared with the ambient air condition	67
6.1 Biomass concentration, biomass productivity, lipid content and lipid productivity of the MC cultivated in the wet and cold dry seasons	82
6.2 Chemical compounds of lipids from MC cultivated with and without CO ₂ supplementation in the wet season	83
6.3 Carbon content, CO ₂ fixation rate and CO ₂ capture of the MC with and without CO ₂ supplementation in the wet and cold dry seasons	86

LIST OF FIGURES

Figure	Page
2.1 Atmospheric concentrations of greenhouse gases and emissions of Global anthropogenic CO ₂ levels	6
2.2 Various methods of CO ₂ sequestration	7
2.3 Simplified overview of the metabolites and representative pathways in microalgal lipid biosynthesis	13
2.4 Overall reaction of transesterification	14
3.1 Flowchart diagram of microalgal cultivation to study the effect of different aeration levels and CO ₂ concentrations on microalgal growth	29
3.2 Modified laboratory glass bottle	31
3.3 Schematic diagram of cultivation of MC under different CO ₂ concentrations	31
3.4 Growth curve of MC under different aeration levels	35
3.5 Dry weight and Chlorophyll <i>a</i> contents of the MC under different CO ₂ concentrations	36
3.6 Biomass and lipid productivity of the MC under different CO ₂ concentrations	39
3.7 Dominant species of MC under different CO ₂ concentrations	42
3.8 % Biovolume of microalgal species in MC cultured under different CO ₂ concentrations	43
4.1 Flowchart diagram of microalgal cultivation for studying the effect of different CO ₂ aeration rates on CO ₂ fixation efficiency of MC	46
4.2 Schematic diagram of cultivation of MC under different CO ₂ aeration rates	47
4.3 Dry weight of the MC under different CO ₂ aeration rates	48
4.4 Chlorophyll <i>a</i> contents of the MC under different CO ₂ aeration rates	49

4.5 Culture medium pH changed under different CO ₂ aeration rates	50
4.6 Biomass and lipid productivity of the MC under different CO ₂ aeration rates	52
4.7 Dominant species of MC under different CO ₂ aeration rates	55
4.8 % Biovolume of microalgal species in MC cultured under different CO ₂ aeration rates	56
5.1 Flowchart diagram of microalgal cultivation using exhaust gas for CO ₂ mitigation and bio-oil production	58
5.2 Schematic diagram of the cultivation of MC under exhaust gas and ambient air conditions	60
5.3 Dry weight of the MC under exhaust gas condition compared with ambient air condition	62
5.4 Chlorophyll <i>a</i> content of the MC under exhaust gas condition compared with ambient air condition	62
5.5 Dominant species of the MC under exhaust gas and ambient air conditions	63
5.6 % Biovolume of microalgal species in MC cultured under exhaust gas and ambient air conditions	64
5.7 Biomass and lipid productivity of the MC under exhaust gas condition compared with ambient air condition.	66
6.1 Flowchart diagram of microalgal cultivation using pure CO ₂ in an outdoor open system	69
6.2 Schematic diagram of microalgal cultivation using pure CO ₂ in an outdoor open system	71
6.3 Growth and parameters of the MC cultivated in the wet season	74
6.4 Growth and parameters of the MC cultivated in the cold dry season	75
6.5 Dominant species of the MC with and without CO ₂ supplementation in the wet and cold dry seasons	78
6.6 % Biovolume of microalgal species in MC cultured with and without CO ₂ supplementation in the wet and cold dry seasons	79

LIST OF ABBREVIATIONS

MC	Microalgal consortium
GWP	Global warming potential
Gt	Giga tonnes
mL	Milliliter
L	Liter
g dw ⁻¹	Gram per dry weight
g L ⁻¹ d ⁻¹	Gram per liter per day
mg L ⁻¹ d ⁻¹	Milligram per liter per day
L ha ⁻¹	Liter per hectare
M ha	Mega hectare
ATP	Adenosine-5'-triphosphate
NADPH	Nicotinamide adenine dinucleotide phosphate
TAG	Triacylglycerols
μmol m ⁻² s ⁻¹	Micromol per square meter per second
mM	Millimol
v/v	Volume per volume
OD ₆₆₅	Optical density at 665 nm
vvm	Volume-to-volume per minute
Chl <i>a</i>	Chlorophyll <i>a</i>
kHz	Kilohertz
rpm	Revolution per minute

ข้อความแห่งการริเริ่ม

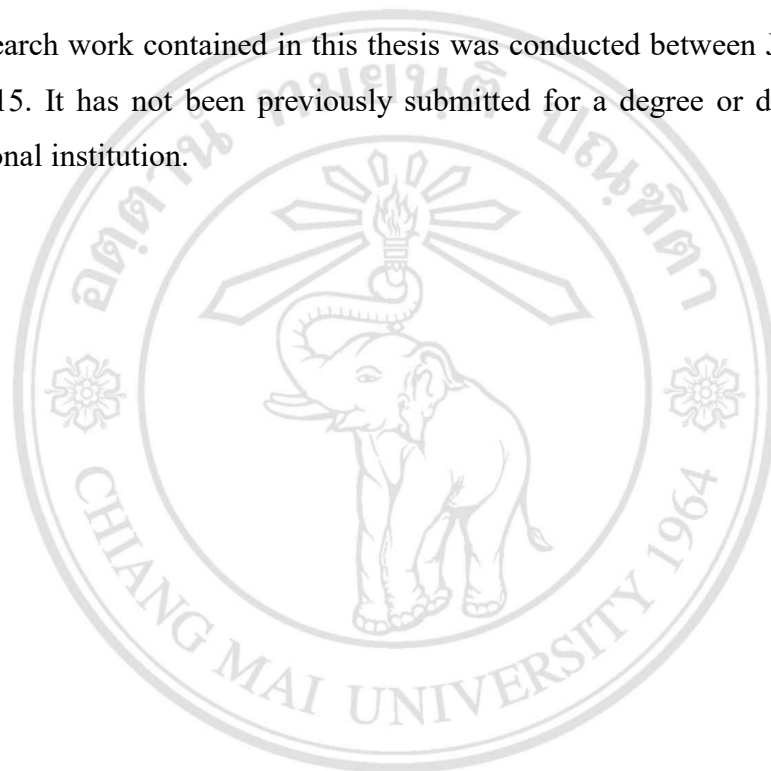

- 1) วิทยานิพนธ์นี้ได้นำเสนอการศึกษาการเพาะเลี้ยงกลุ่มสาหร่ายขนาดเล็กที่ได้รับหิวเชื้อจากอากาศ โดยใช้ก๊าซคาร์บอนไดออกไซด์เพื่อเพิ่มผลผลิตชีวมวล ลิพิด และการบรรเทาการปลดปล่อยก๊าซคาร์บอนไดออกไซด์
- 2) งานวิจัยที่อยู่ในวิทยานิพนธ์นี้ได้ทำการศึกษาระหว่างเดือนมิถุนายน 2554 ถึงเดือนกรกฎาคม 2558 งานวิจัยนี้ไม่เคยนำเสนอในระดับปริญญาหรืออนุปริญญาของสถาบันการศึกษาใดๆ มาก่อน

STATEMENT OF ORIGINALITY

- 1) This thesis was conducted to study the cultivation of microalgal consortium using CO₂ for enhance biomass production, lipid production and CO₂ mitigation of microalgae.
- 2) The research work contained in this thesis was conducted between June 2011 and July 2015. It has not been previously submitted for a degree or diploma at any educational institution.
