ACKNOWLEDGEMENTS

This dissertation is part of my effort to understand Nan Province under the changing circumstances in relation to the different livelihood struggles of people linked to the mountain – valley ecology. I would like to acknowledge several people and organizations instrumental in achieving this.

Thank you all farmers for introducing me and helping me to understand much new knowledge and providing moral support. I am grateful to meet those farmers who maintain their knowledge in rice varieties and other crops in response to the changing livelihood conditions. Some had passed away during my fieldwork period. I would like to use this space to apologize for any foolishness or disturbances. The livelihood struggles of these farmers are crucial for understanding how farmers manage their farming resources in relation to the complicated conditions under globalization. By employing the historically place-based case study, it is a significant point to problematize the agrarian myths and to empirically assess the agrobiodiversity crisis in Thailand that has been happening for decades.

For their academic and personal advice as well as their very patience towards my learning, I would like to acknowledge my research committee. It is my privilege to meet my supervisor, Asst. Prof. Dr. Chusak Wittayapak, who introduced me to the political ecology approach and included me in several of his research projects. With his kind offering, I also got a PhD scholarship from the Commission of Higher Education of Thailand. Under his suggestion, I also received a chance to know other professors whose research focused on farmers in Thailand. Thank you very much, Prof. Dr. Yos Santasombat. You might not know that several books written by you inspired me since my BA mini-research and MA thesis on the Mlabri ethnic group in Thailand. In particular, your latest book, *Flexible Peasants: Reconceptualizing the Third World's Rural Types*, came at the right time for my PhD research on peasantry

and agrobiodiversity.

Two scholars from York University, Canada, Prof. Dr. Peter Vandergeest and Assoc. Prof. Dr. Robin Roth, are appreciated for their advice on my conceptualization of the linkage between neoliberalism, nature and livelihood. For Dr. Roth, who later became a member of my research committee, I would like to thank you very much for supporting my research fieldwork by providing a small-grant. Your hospitality is very much appreciated, especially in 2010 when you were still on maternity leave – the period of time that I had been a visiting scholar for three months at the York Center for Asian Research (YCAR), York University. Thank you, Dr. Vandergeest for allowing me to attend your class, *the Cultural Politics of Environment and Development*, helping me to see the way to create the classroom which mixed PhD and MA students from different faculties.

Also I am grateful my external committee members, Assoc. Prof. Dr. Jamaree Chientong and Lect. Dr. Surin Onprom, for their comments in order to help me correct the misunderstanding points in this dissertation.

Thanks to the state officials and staff of seed companies who gave me a chance to interview them about their works in relation to seed production and integration of small scale farmers into their schemes. For NGOs: AAN Esan, BioThai, and HMNF, in particular my friends in Joko Learning Center and other organizations under CBDC network, are appreciated. My gratitude goes to Samrauy, Pang, Kanaung, Thong, Ubon, and Witoon for providing the useful information and letting me attend several meetings. In response to the production of knowledge in the relationships between NGOs and farmers, I hope that this dissertation can be the concluding parts but not the end for our dialogue about the possibilities of small scale farmers with the reflexive conservation of agrobiodiversity in the 21st century.

Friends are also appreciated for their critical discussion and moral support over the last seven years. Some of them have already become a university lecturer. Atchara, Natedoa, Paiboon, Tubtim, Kangwan, Kam, Baitong, Winai, Yuttapong, Aratee, Boonsung, Mattijs, Rin, Taey, Li, Ratchanee, Vanessa, Sai Latt, Keith,

Shinsuke, Takashi, Shu. Our PhD program coordinators, including the former, Khun Yew and the latter, Khun Narita are appreciated for their assistance during my study. At YCAR, I am also grateful for Alicia, who kindly assisted me with many issues. Thank you, Derek for helping to edit my writing and make this dissertation understandable in a human language. I am also grateful to Ajarn Suriya for his moral support and discussion about the ethnographical fieldwork. He provided me several books about the Northeastern Thai farmers whose livelihoods had been studied for decades by him and other scholars, in particular Ajarn Wattana and Ajarn Keyes.

At the heart of this long journey is my family in Chiang Mai and Nan. Without their financial and moral support for many years before and during my PhD study, my graduation is meaningless. Thank you, my wife, Aree, very much for your love and patience for several years. With your support, this dissertation had been finished under manageable conditions. I am now home.

Last but not least, I would like to acknowledge the Commission of Higher Education for supporting my PhD scholarship and the Challenges of the Agrarian Transition in Southeast Asia (ChATSEA) Project for giving me a small grant for fieldwork. Thank you YCAR for providing me the working space during my visit in 2010.
