Abstract in Thai	e
Abstract in English	g
List of Tables	k
List of Figures	l
List of Abbreviations	m
Chapter 1 Introduction	1
1.1 Statement of the problems and objectives	1
1.2 Anticipated benefits	2
Chapter 2 Review of the literature	3
2.1 Definition of deep carious lesions	3
2.2 Effects of deep caries on dentin-pulp complex	4
2.3 Bacterial invasion in deep caries	6
2.4 The remaining dentin thickness	7
2.5 The young and aged dentin-pulp complex	9
2.6 Irrigation of deep cavity after complete caries removal	9
2.7 Pulp protection materials: liners and bases	10
Chapter 3 Materials and methods	25
3.1 Research design	25
3.2 Materials	25
3.3 Research populations and samples	26
3.3.1 Study populations	26
3.3.2 Patient selection and examination	26
3.3.3 Sample groups	27
3.3.4 Sample size calculation	28
3.3.5 Random sampling	28
3.4 Treatment protocol	28
3.4.1 Follow up period	33

	Page
3.5 Data analysis	34
3.6 Location of study	35
Chapter 4 Results	36
Chapter 5 Discussion	42
5.1 Discussion	42
5.2 Clinical application	48
5.3 Further research suggestions	48
References	49
Appendices	60
Appendix A	61
Appendix B	62
Appendix C	64
Appendix D	67
Appendix E	69
Appendix F	71
Curriculum Vitae	72

## LIST OF TABLES

	Page
Table 2.1    Pulp response to different pulp protection materials in deep cavities	14
Table 2.2    The compositions of two different calcium-silicate based cements: Biodentine™ and ProRoot®MTA	16
Table 2.3    Overview of potential clinical applications of Biodentine™	17
Table 2.4    Studies demonstrating physical and biological properties of Biodentine™ and other pulp protection materials	18
Table 2.5    Properties of Biodentine™ compared to Dycal® and Vitrebond™	23
Table 4.1    Baseline variables of the Dycal®&Vitrebond™ and Biodentine™ groups	38
Table 4.2    The outcomes of pulp protection with Dycal® and Vitrebond™ and Biodentine™	39
Table 4.3    Demographic data of teeth with negative cold test	40
Table 4.4    Clinical and radiographic evaluation of teeth with unfavorable outcomes	41
Table 5.1    Desired properties of pulp protection material compared to Dycal® and Vitrebond™ and Biodentine™	47

## LIST OF FIGURES

	Page
Figure 2.1 Deep dentin carious lesions are determined radiographically	4
Figure 3.1 Rubber dam isolation after administration of a local anesthesia	29
Figure 3.2 Caries removal until make it to see the pulp by transparency	30
Figure 3.3 Pulp exposure occurred and the tooth was excluded	30
Figure 3.4 Dycal® was applied and then was covered with Vitrebond™	31
Figure 3.5 Biodentine™ was applied into the cavity	31
Figure 3.6 The tooth was restored with resin composite	32
Figure 3.7 The tooth was restored with SSC	32
Figure 4.1 Consort 2010 flow diagram of the study	37

## LIST OF ABBREVIATIONS

RDT	Remaining dentin thickness
CHX	Chlorhexidine
NaOCl	Sodium hypochloride
CH	Calcium hydroxide
GI	Glass ionomer cement
RMGI	Resin-modified glass ionomer cement
OPC	Ordinary Portland cement
MTA	Mineral trioxide aggregate
SSC	Stainless steel crown
