Chapter 1 Introduction	1
1.1 Background and motivation	1
1.2 Literature review	3
1.3 Research objective	6
1.4 Research scope and method	7
1.5 Education advantages	7
1.6 Research location	7
1.7 Thesis organization	7
Chapter 2 Principles and Theories of the Study	9
2.1 K-Nearest neighbor	9
2.2 Fuzzy membership functions	11
2.3 Fuzzy K-Nearest Neighbor	12
2.4 String grammar	15
2.5 String Grammar Nearest Neighbor	16
2.6 String Grammar K-Nearest Neighbor	16

2.7 String Grammar Fuzzy K-Nearest Neighbor	17
Chapter 3 Research Designs and Methods	21
3.1 String Grammar Fuzzy K-Nearest Neighbor	21
3.1.1 sgFKNN1	21
3.1.2 sgFKNN2	22
3.1.3 sgFKNN3 - Possibilistic Entropy based Clustering (PEC)	23
3.1.4 sgFKNN4 - Vector Fuzzy C-Means (VFC)	23
3.1.5 sgFKNN5 - New Fuzzy Entropy (NFE)	24
3.1.6 sgFKNN6 - Rule Generation Based (RGB)	24
3.1.7 sgFKNN7-PCMed	25
Chapter 4 Results and Discussion	26
4.1 String generation process	26
4.2 Standard dataset experiment	30
4.3 Face recognition and expression experiment	47
4.3.1 Face recognition experiment result	52
4.3.2 Facial expression recognition experiment result	85
Chapter 5 Conclusion	122
References	125
Appendix	133
Curriculum Vitae	198

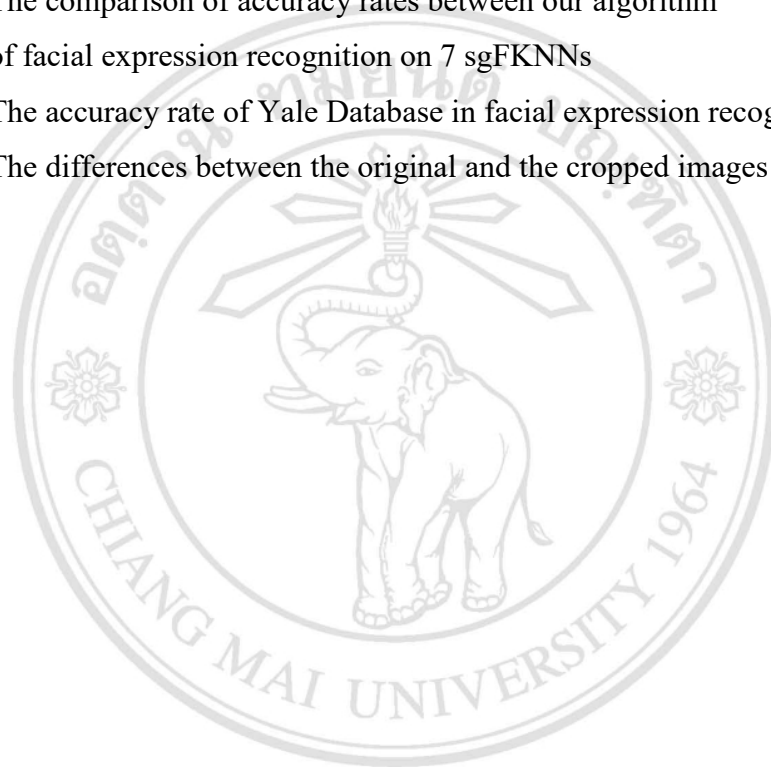

LIST OF TABLES

	Page
Table 4.1 Bin orientation	29
Table 4.2 The experimental results from sgFKNN1 for standard datasets when using crisp initialization	32
Table 4.3 The experimental results from sgFKNN2 for standard datasets when using crisp initialization	33
Table 4.4 The experimental results from sgFKNN3 for standard datasets when using crisp initialization	33
Table 4.5 The experimental results from sgFKNN4 for standard datasets when using crisp initialization	34
Table 4.6 The experimental results from sgFKNN5 for standard datasets when using crisp initialization	34
Table 4.7 The experimental results from sgFKNN6 for standard datasets when using crisp initialization	35
Table 4.8 The experimental results from sgFKNN7 for standard datasets when using crisp initialization	35
Table 4.9 The maximum accuracy rates for the standard datasets on 7 sgFKNNs	36

LIST OF SYMBOLS

C	The number of classes
$lev_{a,b}$	Levenshtein distance between two strings a, b
TN	The number of person in the training dataset
\mathbf{x}_i^j	A training string of image i in class j
N_j	The number of training strings of images in class j
K	The number of nearest neighbors used
$u_i(\mathbf{x})$	Membership value of string \mathbf{x} in class i
u_{ia}	The membership value of training string of image \mathbf{x}_a^i in class i
m	The fuzzifier
\mathbf{x}_{med}	The median in a set of strings X
V_N	Finite set of nonterminal symbols
V_T	Finite set of terminal symbols
S	Start symbol, $S \in V_N$

ข้อความแห่งการริเริ่ม

วิทยานิพนธ์นี้นำเสนออัลกอริทึมใหม่ที่มีการผสมผสานความไม่แน่นอนเข้ากับ
สตรีตริงแกรมมาเคเนียร์สเนเบอร์ เพื่อเป็นอัลกอริทึมในการรู้จำข้อมูลที่มีลักษณะเป็น
โครงสร้าง ไม่ใช่ข้อมูลที่มีลักษณะเป็นตัวเลข

STATEMENTS OF ORIGINALITY

This thesis presents new algorithms by incorporating uncertainty into string grammar K-nearest neighbor. This algorithm is a structural dataset recognition algorithm not a numerical dataset recognition algorithm.
