Chapter 1 Introduction	1
1.1 Study Area	2
1.2 Research Objectives	3
1.3 Rational	4
1.4 The Geological Setting and Tectonic History of the Taranaki Basin	4
1.4.1 The Location of the Taranaki Basin on Region Scale	4
1.4.2 North Taranaki Graben	8
1.5 Taranaki Basin and Volcanism	10
1.6 Structural History of the North Taranaki Graben	13
1.7 Stratigraphy	15
1.7.1 Stratigraphy of North Graben	19
1.8 Literature Review	20

1.8.1 Investigation of the spatio-temporal relationship between normal and arc faulting volcanism on million-year time scales	20
1.8.2 Interactions between the prograding giant foresets formation and a subsiding depocentre	20
1.8.3 Volcano growth mechanisms and the role of sub-volcanic intrusions	21
1.8.4 Seismic reflection imaging and controls on the preservation of ancient sill-fed magmatic vents	21
1.8.5 Seismic characteristics and distribution of volcanic intrusions and hydrothermal vent complexes in the Vøring and Møre basins	21
1.8.7 The potential role of igneous intrusions on hydrocarbon migration, West of Shetland	22
Chapter 2 Data and Methodology	23
2.1 Dataset	23
2.2 Seismic Acquisition and Processing	23
2.3 Seismic Interpretation	26
2.4 Attribute Analysis	26
2.5 Quantification	27
2.6 Rose Diagram	27
2.7 Constraining of the Seismic Velocities of the Volcanogenic Mounds	27
2.8 Internal Architecture of the Volcanic Rocks	28
2.8.1 Volcanic formation	28
2.8.2 Volcanic Edifice	29
2.8.3 Volcanic Formation	30
2.8.3.1 Single Central Eruption	30
2.8.4 Size Characterization of volcanic formation	31
2.8.5 Distribution of volcanic formation	31
2.8.6 Volcanic Edifice	31

2.8.7 Identification of Volcanic Edifice	31
2.8.8 Seismic signature of a volcanic crater	32
2.8.9 Classification of Volcanic edifice	32
Chapter 3 Result	39
3.1 Marker Horizons	39
3.2 Structural style	44
3.3 Seismic Units	51
3.4 Isochrons of the units mapped	59
3.5 Volcanic Edifices	61
3.6 Quantification of edifice shape	75
3.7 Quantification results of the onshore volcanoes	76
3.8 Well data analysis	80
3.9 Seismic stratigraphic and volcano stratigraphic analysis	83
Chapter 4 Discussion	94
4.1 Structural style	94
4.2 Volcanic activity	94
4.3 Volcano growth mechanism	95
4.5 Onshore volcanoes	101
CHAPTER 5 Conclusion	103
5.1 Conclusion	103
References	105
Appendix	110
Appendix A	110
Appendix B	132
Appendix C	136

LIST OF FIGURES

		Page
Figure 1.1	Location of the Study Area (A), Parihaka 3D-Seismic Survey, Offshore, New Zealand, Index map taken from ngdc.noaa.gov (B) location of the onshore Volcanoes (Figure taken from Google Earth, 2015).	3
Figure 1.2	Structural elements map of the New Zealand Continent. Plate boundaries are marked by the maroon dot-dash line. Elevation/Water depths are indicated by varying shades of green and blue. Figure is modified from https://en.wikipedia.org/wiki/Geology_of_New_Zealand .	5
Figure 1.3	Structural element map of the study area (Modified from Aaron, 2014).	7
Figure 1.4	A schematic diagram from the structural evolution the Taranaki basin, (a) shows the map view of two crustal blocks that rotate about a vertical axis due to extension in the North and shortening in the South. Source: Giba et al., (2010).	9
Figure 1.5	Map showing the Hikurangi subduction margin and the North of New Zealand. The locations of the faults are shown in black and the ages of the subduction related volcanic centres are denoted by circles (b) Schematic section across the Hikurangi subduction zone (Giba et al., 2013).	11
Figure 1.6	shows the seismic view of the volcanics mapped by Giba et al., 2013 and tied with the Arawa-1 well.	12

Figure 1.7	a) showing the plate boundary setting of the North Island, New Zealand. It shows the location of the Taranaki basin and the Parihaka fault in the back arc region of the Hikurangi subduction zone. b—d) maps depicting the temporal evolution of the western margin of the central Taranaki basin. Black polygons denote the active normal faults of Late Cretaceous (a), b, Pliocene, (c), and Pleistocene (d). Grey polygons enclose Parihaka fault (Giba et al., 2010).	14
Figure 1.8	Displacement analysis of the Parihaka fault. a) map view of the segmented fault trace at Pleistocene level, b) displacements along the fault that during Late Cretaceous-Eocene, Pliocene and Pleistocene are denoted by red, green and yellow, respectively. Maximum and minimum displacements are indicated by crosses and filled circles respectively. Minimum displacement coincides with the locations of relay zones (indicated by grey numbers). Figure used from Giba et al. 2010.	15
Figure 1.9	Stratigraphic column of the Taranaki basin (modified from King and Trasher 1996 and Aaron 2014).	17
Figure 2.1	Location map for Arawa-1 well.	25
Figure 2.2	Diagram showing the Dual source and eight streamer combination diagram, figure used from processing report.	26
Figure 2.3	shows the volcanic formation, edifice, massif along with faults in Yingcheng Formation in the Songliao basin(Ran et al., 2014).	29
Figure 2.4	Multiconic volcanic edifice (Ran et al., 2014).	35
Figure 2.5	Monoconic volcanic edifice (Ran et al., 2014).	35

Figure 2.6	Shield volcanic edifice (Ran et al., 2014).	36
Figure 2.7	Domed volcanic edifice (Ran et al., 2014).	36
Figure 2.8	Fissured volcanic edifice (Ran et al., 2014).	37
Figure 2.9	Schematic Illustration of a combined volcanic edifice (Ran et al., 2014).	37
Figure 2.10	A cross-section through volcano. Figure retrieved from https://bio4esobil2011.wordpress.com/2011/11/28/parts-of-a-volcano-and-materials/ .	38
Figure 3.1	Regional stratigraphic column tied with the seismic showing the relative ages of the horizons.	41
Figure 3.2	Showing interpreted seismic section.	43
Figure 3.3	Showing uninterpreted seismic section.	43
Figure 3.4	Showing time slice at 3.5 s TWT overlaid with coherency attribute.	47
Figure 3.5	Showing time slice at 2.5 s TWT overlaid with coherency attribute.	47
Figure 3.6	Showing time slice at 1.5 s TWT overlaid with the coherency.	47
Figure 3.7	Time Structure map of the H-1 horizon.	48
Figure 3.8	A cross section showing the H-1 horizon.	48
Figure 3.9	Time structure map of the H-4 horizon.	49
Figure 3.10	A cross section showing the H-4 horizon.	49
Figure 3.11	Shows the time structure maps of horizons H1-H9 (bottom to top).	50

Figure 3.12	Isochrons of the horizons mapped from older to younger.	60
Figure 3.13	Possible conduit location in the seismic section.	62
Figure 3.14	Showing map view and 3 dimensional distribution of the edifices in the study area.	63
Figure 3.15	A) seismic section view of the edifice 1, B) delineation on time slice, C) time structure map of edifice 1(reference fig. 3.14).	64
Figure 3.16	A) seismic section view of the edifice 2, B) delineation on time slice, C) time structure map of edifice 2(reference fig. 3.14).	65
Figure 3.17	A) seismic section view of the edifice 3, B) delineation on time slice, C) time structure map of edifice 3(reference fig. 3.14).	66
Figure 3.18	A) seismic section view of the edifice 4, B) delineation on time slice, C) time structure map of edifice 4(reference fig. 3.14).	67
Figure 3.19	A) seismic section view of the edifice 5, B) delineation on time slice, C) time structure map of edifice 5(reference fig. 3.14).	68
Figure 3.20	A) seismic section view of the edifice 6, B) delineation on time slice, C) time structure map of edifice 6(reference fig. 3.14).	69
Figure 3.21	A) seismic section view of the edifice 7, B) delineation on time slice, C) time structure map of edifice 7(reference fig. 3.14).	70
Figure 3.22	A) seismic section view of the edifice 8, B) delineation on time slice, C) time structure map of edifice 8(reference fig. 3.14).	71
Figure 3.23	A) seismic section view of the edifice 9, B) delineation on time slice, C) time structure map of edifice 9(reference fig. 3.14).	72
Figure 3.24	A) seismic section view of the edifice 10, B) delineation on time slice, C) time structure map of edifice 10 (reference fig.	73

3.14).

Figure 3.25	A) seismic section view of the edifice 11, B) delineation on time slice, C) time structure map of edifice 11(reference fig. 3.14).	74
Figure 3.26	Graphs showing the quantification results (A, B, C).	77
Figure 3.27	Graphs showing the quantification results (D, E, F).	78
Figure 3.28	showing the quantification results of the onshore volcanoes located on the Taranaki peninsula.	79
Figure 3.29	well log plots for Arawa-1 showing the distribution of shale, sand and tuff.	80
Figure 3.30	Cross plot between DT vs. Depth showing the compaction trend.	81
Figure 3.31	Showing cross-plot between vs. RHOB with depth on Z-axis showing the distribution of snd, shale and tuff.	82
Figure 3.32	Time -Depth chart for Arawa-1 well based on well report.	82
Figure 3.33	A cross-section showing the local wedge shape geometry along the fault.	83
Figure 3.34	Time slice at 2.404 s TWT overlaid with RMS shows direction of channels.	84
Figure 3.35	showing radial drainage pattern in time slice at 2.183 s TWT overlaid with RMS.	85
Figure 3.36	showing the onlap and relations of the edifice 2.	86
Figure 3.37	intrusive body showing the constant thickness on both sides and thinning on top.	87

Figure 3.38	showing the onlap relationship of the edifice 4.	87
Figure 3.39	seismic stratigraphic relationship of the edifice 5.	88
Figure 3.40	RMS time slice at 1.164 s TWT.	89
Figure 3.41	IL 4200 showing the onlap and downlap of the reflectors.	89
Figure 3.42	Extracted RMS amplitudes on H-4 horizon.	90
Figure 3.43	phantom horiozn created 250 ms the H-4 horizon.	91
Figure 3.44	H-8 horizon with RMS amplitude extraction.	92
Figure 3.45	RMS extraction along the Horizon A.	93
Figure 4.1	Figure 4.1 showing the onlap and draping of the strata.	97
Figure 4.2	showing a stratigraphic column through Kora-1 well.	98
Figure 4.3	Location map for Kora-1 well along with the study area (yellow polygon represents study area).	99
Figure 4.4	A graph showing the comparison with onshore and offshore volcanoes.	102

LIST OF ABBREVIATIONS

2D	Two Dimensional
3D	Three Dimensional
ENE	East North East
GFF	Giant Foresets Formation
GR	Gamma Ray
Hz	Habitable Zone
IL	Inline (seismic section)
Km	Kilo meter
Km ²	Kilo meter square
Km ³	Kilo meter cube
DT	Delta- Time
Ma	Million years
MD	Measured Depth
Md	Millidarcy
ms	milisecond
NNE	North North East
N-NW	North-North West
N-S	North South
NZPAM	New Zealand Petroleum and Minerals
PR3460	Petroleum Report Series
RHOB	Bulk Density Log
RMS	Root Mean Square
SEG Y	Society of Exploration Geophysicists ‘Y’
SSW	South South West
SW	South West
TWT	Two Way Time
WSW	West South West
XL	Cross line (seismic section)

LIST OF SYMBOLS

L	Length of faults
l	constant length for length weighting
wl	Length weighted
wt	Throw weighted
