ACKNOWLEDGEMENT

This thesis is not written if I do not acquire many continued assistance, suggestion and moral support from many people.

First of all, I would like to express my deepest appreciation to advisor Assoc. Prof. Dr. Pisith Singjai who always gives me the useful suggestion, problem solving and encouragement throughout this thesis. He has given a great opportunity to me for learning and doing a research about nanoscience and nanotechnology.

Secondly, I would like to be grateful for my co-advisor, Dr. Orawan Wiranwetchayan who has given me the valuable advices and supported my wish throughout doing research.

I would like to special thank Mr. Ekkapong Kuntarak for a lot of knowledge, understanding and techniques about Raman spectroscopic measurement.

I would like to thank Mr. Wattikon Sroila for his always help in Ultraviolet-visible spectroscopic measurement.

I am also like to all members of the Nanomaterials Research Unit, Chiang Mai University for special time, friendship, good inspiration and best assistance.

Special thanks to the Department of Physics and Materials Science, Chiang Mai University and the Science Achievement Scholarship of Thailand (SAST) for their continued support.

Finally, I would like to be most grateful for my family for their understanding and good moral support.

Anupong Sukee
