Abstract in English	f
List of Tables	l
List of Figures	n
List of Abbreviations/ Symbols	q
Chapter 1 Introduction	
1.1 Tea	1
1.2 Chemical composition in tea leaves	3
1.3 Miang (Fermented tea)	10
1.4 Antioxidant activity	12
1.4.1 Total phenolic contents assay	15
1.4.2 DPPH radical scavenging activity assay	15
1.4.3 Ferric ion reducing antioxidant power assay (FRAP)	16
1.4.4 Antioxidant activity of tea leaves	17
1.5 The scope and aims of this research	19
Chapter 2 Experimental	
2.1 Apparatus and chemicals	
2.1.1 Apparatus	20
2.1.2 Chemicals	21
2.2 Materials	22
2.3 Extraction of volatile constituents by simultaneous distillation extraction (SDE)	23
2.4 Percentage of extraction yield	24
2.5 Analysis of volatile constituents by GC-MS	24
2.6 Optimization of solvent extraction	25

2.7	Determination of total phenolic content	
2.7.1	Preparation of solutions	25
2.7.2	Protocol for total phenolic content	26
2.8	DPPH radical scavenging assay	
2.8.1	Preparation of solutions	27
2.8.1	Protocol for DPPH radical scavenging activity	27
2.9	FRAP assay	
2.9.1.	Preparation of reagents	28
2.9.2.	Protocol for reducing power	29
2.10	Quantitative analysis by HPLC	
2.10.1	Isolation of caffeine	30
2.10.2	Preparation of the solutions	30
2.10.3	Preparation of mobile phase for analysis of phenolic compounds and caffeine	30
2.10.4	Optimization of separation conditions	
1)	Column type	31
2)	Mobile phase composition	32
3)	Gradient profile of mobile phase	33
4)	Wavelength	34
2.10.5	Method validation of HPLC analysis	
1)	Detection limit	35
2)	Precision	35
3)	Percent recovery	36
2.10.6	Calibration curves	37
2.10.7	Determination of phenolic compounds and caffeine in samples	37
2.11	Statistical analysis	37
Chapter 3 Results and discussion		
3.1	General	38
3.2	Volatile oils	
3.2.1	Extract of volatile oils	39
3.2.2	Determination of chemical components of the volatile oils	40

3.2.3	Total phenolic contents of volatile oil	47
3.2.4	Antioxidant activity of the volatile oils	48
1)	DPPH assay of volatile oils	49
2)	FRAP assay of volatile oils	49
3.3	Optimization of solvent extraction	50
3.3.1	Total phenolic contents of solvents extract	52
3.3.2	DPPH assay of the extract by various solvents	53
3.3.3	FRAP assay of the extract by various solvents	55
3.4	Optimization of HPLC condition	
3.4.1	Effect of type column on separation	57
3.4.2	Effect of mobile phase composition	58
3.4.3	Effect of gradient profile of mobile phase	59
3.4.4	Effect of wavelength	60
3.4.5	Summary of the optimum HPLC condition	61
3.5	Method validation	
3.5.1	Detection limit	62
3.5.2	Precision	63
3.5.3	Recovery assay	65
3.6	Quantitative HPLC analysis of phenolic compounds and caffeine in samples	
3.6.1	Extraction yield	66
3.6.2	HPLC analysis of phenolic compounds and caffeine in samples	67
3.7	Total phenolic content and antioxidant activities of Assam tea	
3.7.1	Total phenolic contents of extract	78
3.7.2	Antioxidant activity of the leaves extracts and waters	
1)	DPPH assay of leaves extracts and water	79
2)	FRAP assay of leaves extracts and water	80
3.8	Correlation between total phenolic contents and antioxidant activities	83
Chapter 4	Conclusion	84
References		87

LIST OF TABLES

		Page
Table 1.1	Antioxidant compounds found in various food	12
Table 1.2	The major classes of phenolic compounds in plants	14
Table 2.1	Concentration of standard mixtures for determination of detection limit	35
Table 2.2	Concentration of standard mixtures for determination of % recovery	37
Table 3.1	Physical properties of fresh, steamed, fermented leaves, steamed and fermented water from Assam tea	39
Table 3.2	Percentages yields (%yield) of volatile oils from Assam tea	40
Table 3.3	Chemical composition of volatile oils from Assam tea	43
Table 3.4	Total phenolic content and antioxidant activities of essential oils of Assam tea	50
Table 3.5	Physical properties and percentages yields of solvent extract of fresh leaves from Assam tea	52
Table 3.6	Total phenolic contents of fresh leaves extract obtained from various type of solvent extraction	53
Table 3.7	Antioxidant activities of fresh leaves extract obtained by different solvent extractions.	56
Table 3.8	Peak areas of phenolic compounds at various wavelength	60
Table 3.9	Peak areas of phenolic compounds and caffeine at various concentrations for determination of LOD and LOQ	62
Table 3.10	Summary of LOD and LOQ of phenolic compounds and caffeine	63
Table 3.11	Repeatability of the peak area of each phenolic compound and caffeine	64
Table 3.12	Reproducibility of the peak area of each phenolic compound and caffeine	64

Table 3.13	The percentage recovery of extraction for fresh and 45 days fermented leaves from Assam tea at 5LOQ and 10LOQ concentration	65
Table 3.14	Physical properties and percentages yields of fresh, steamed and fermented leaves extracts from Assam tea	66
Table 3.15	Contents of phenolic compounds and caffeine of leaves extracts from Assam tea	74
Table 3.16	Content of phenolic compounds and caffeine of water samples from Assam tea	75
Table 3.17	Total phenolic contents of leaves extracts and water samples	78
Table 3.18	Antioxidant activities of fresh, steamed, fermented leaves, steamed and fermented water of Assam tea	80
Table 3.19	Correlation coefficient between total phenolic contents and the DPPH activity of solvent extracts, essential oils sample extracts and sample waters	83

LIST OF FIGURES

LIST OF ABBREVIATIONS/ SYMBOLS

A	absorbance
amu	atomic mass unit
°C	degree celsius
DAD	diode array detector
DW	dry weight
g	gram
GAE	gallic acid equivalent
GC	gas chromatography
HPLC	high performance liquid chromatography
I.D.	internal diameter
L	liter
LOD	limit of detection
LOQ	limit of quantification
MS	mass spectrometry
MW	molecular weight
ml	milliliter
min	minute
m/z	mass to charge ratio
λ_{\max}	maximum absorption wavelength
n.d.	not detected
nm	nanometer
%	percent
ppm	part per million
R^2	correlation coefficient
RI	refractive index
RSD	relative standard

SD	standard deviation
TIC	total ion chromatogram
UV-VIS	ultraviolet-visible
v/v	volume by volume
W	peak width
