ACKNOWLEDGEMENT

It would not have been possible to complete this doctoral thesis without the assistance and contribution of many people, some of whom I would like to thank in particular.

Firstly, I would like to express my sincere gratitude and appreciation to Asst. Prof. Dr. Angkhana Inta, my major advisor for Master and Doctoral theses. I am deeply grateful to her for constant support in every aspect and giving me the guidance throughout the time of my study. She always gives me good advice and useful suggestions with regards to my study and personal matters.

I also would like to express my sincere appreciation to Prof. Dr. Henrik Balslev, my co-advisor for giving me advices on the guidance throughout and to Asst. Prof. Dr. Prasit Wangpakapattanawong, a co-advisor, for support and improvement of my dissertation.

I also wish to give many thanks to Dr. Prachaya Srisanga and Lect. Dr. Kamonnate Srithi external examination committee members, for their helpful comments and corrections of this dissertation.

This work was supported by Development and Promotion of Science and Technology Talents Project and the Graduate School, Chiang Mai University, Thailand. I would like to express my gratitude for financial support throughout my study.

I am grateful to the Department of Biology, Faculty of Science, Chiang Mai University for providing the space for laboratory work and to all lecturers from whom I have learned academic knowledge and laboratory techniques.

I am most grateful to all the members of the Ethnobotany Laboratory Chiang Mai university for their great help, companionship and cheerful encouragement.

Finally, I would like to express my deep gratitude to my father, mother and all members of my family who provided moral support and comfort during my study and research until the completion of this dissertation. Last but not least, to Miss Nitiya Guntiya, thanks for hers love and always being by my side. I would not be here today without her.
