ACKNOWLEDGEMENT

I would first like to express my gratitude to Professor Dr. Danai Boonyakiat, the supervisor, for his advice, comments and time on my dissertation. Furthermore, I am deeply grateful to the co-advisors, Assistant Professor Dr. Siwaporn Thumdee and Assistant Professor Dr. Pichaya Poonlarp for their suggestions improving the thesis. Without their guidance and persistent help, this dissertation would not have been possible.

A heartfelt appreciation goes to the supports of Royal Project Foundation and Highland Research and Development Institute (Public Organization). I am thankful to the Central laboratory, Faculty of Agriculture, Chiang Mai University for consultation on the experiment analysis in the laboratory. I received generous supports from the organic vegetable team from Royal Project Foundation and HRDI providing the raw materials. Remarkably, I want to thank Mr. Somsak Aroonratsamesakul, the farmer in Muang Ang Village in Inthanon Agricultural Research Station who took care of the organic pak-choi during the experiment.

Finally, I would like to express my heartfelt thanks to my parents for their continued supports, understanding and encouragement. I also thank my younger sister and her daughter for their assistance.
