Chapter 1 Introduction	1
1.1 Background	1
1.2 Why carbon nanotube composites	2
1.3 Overview	2
1.4 Objectives of this work	3
1.5 References	5
Chapter 2 Theory	9
2.1 Types of carbon nanotubes (CNTs)	9
2.2 Growth mechanism of CNTs	12
2.2.1 Tip growth model	12
2.2.2 Base-growth/ Root-growth model	13
2.3 Composite materials	13
2.4 Processing of composite materials	15

CONTENTS (Continued)

	Page
2.4.1 Polymer-Matrix Composites (PMC)	15
2.4.2 Metal-Matrix Composites (MMC)	17
2.4.3 Ceramic-Matrix Composites (CMC)	17
2.4.4 Carbon-Matrix Composites	19
2.5 Theory of hybrid composite materials	20
2.5.1 Mechanism of heat transfer	21
2.6 Solar heat collector	24
2.6.1 Solar Energy	24
2.6.2 Conduction	26
2.6.3 Convection	28
2.6.4 Radiation	28
2.7 Types of solar heat collectors	29
2.7.1 Flat-Plate Collectors (FPC)	30
2.7.2 Evacuated-Tube Collectors	31
2.7.3 Concentrating Collectors	31
2.8 References	33
Chapter 3 Experimental Procedures	37
3.1 MWNTs preparation	37
3.1.1 Synthesis and preparation of MWNTs	37
3.2 Preparation of copper and aluminium surfaces for adhesive bonding	38
3.2.1 Preparation of copper surfaces	38
3.2.2 Preparation of aluminium surfaces	38
3.3 Preparation MWNTs-LLDPE sheet and MWNTs-PVB sheet before coated on metal sheet	40
3.4 Sample characterization	41

CONTENTS (Continued)

	Page
3.4.1 Scanning electron microscopy (SEM)	41
3.4.2 Density test	41
3.4.3 X-ray diffraction (XRD)	41
3.5 Mechanical properties test	42
3.5.1 Tensile tests	42
3.5.2 Impact strength tests	43
3.6 Thermal properties test	44
3.6.1 The reflectance of the coating	44
3.6.2 Heat absorbing test	44
3.6.3 The energy conversion efficiency was measured using a home-made method	45
3.7 References	46
Chapter 4 Results and Discussions	47
4.1 Synthesis of Carbon Nanostructures by CVD Method	47
4.2 Melt-mixing the composite materials, and properties measurements	50
4.3 MWNTs/polymer composites coated on copper and aluminum sheet	57
4.4 Mechanical property of adhesive bonding	61
4.5 Heat absorb of the MWNTs/LLDPE composite coated on Cu sheet	62
4.6 The reflectance spectra of MWNTs/LLDPE composites	64
4.7 Water heat absorbs of solar radiation	66
4.8 References	70
Chapter 5 Conclusions and Suggesions for Future Work	72
5.1 MWNTs/LLDPE composites prepared via melt mixing process	72
5.2 Solar heat absorbing coating from MWNTs/ LLDPE coated on the copper sheet	72

LIST OF ABBREVIATIONS AND SYMBOLS

°C	Degree Celsius
K	Degree Kelvin
h	Hour
MWNTs	Multi-walled carbon nanotubes
LLDPE	Linear low density polyethylene
Cu	Copper
Al	Aluminium
PVB	Polyvinyl butyral
SEM	Scanning electron microscopy
CNTs	Carbon nanotubes
SWNTs	Single-walled carbon nanotubes
PMC	Polymer-matrix composites
MMC	Metal-matrix composite
CMC	Ceramic-matrix composite
XRD	X-ray diffraction
α	Absorptance
R	Reflectance
T	Transmittance
Q	Solar energy collected
P	Power
k_C	Thermal conductivity of the composite
k_p	Thermal conductivity of the particle
k_m	Thermal conductivity of the matrix
Φ_p	Volume fraction of particle
Φ_m	Volume fraction of matrix
vol.	Volume
wt.	Weight

ข้อความแห่งการริเริ่ม

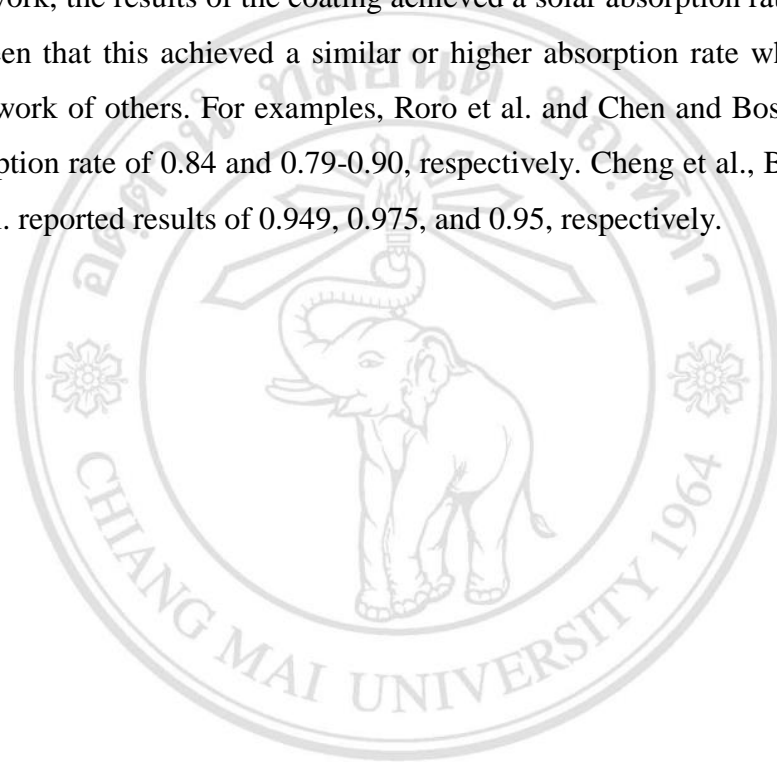

- 1) เป็นการเตรียมชิ้นงานที่ง่ายและรวดเร็ว โดยการใช้วิธีบดผสมแล้วให้ความร้อนพร้อมการอัดเพื่อเคลือบติด อีกทั้งยังให้ค่าความแข็งแรงในการยึดเกาะแผ่นอะลูมิเนียมและแผ่นทองแดงที่สูง
- 2) การเตรียมชิ้นงานด้วยวิธีนี้ ให้ค่าการดูดซับความร้อน 0.95 ซึ่งค่อนข้างสูงเมื่อเทียบกับงานวิจัยอื่นๆ เช่น โรโรและคณะ เซนและบอสตรอม ได้รายงานผลค่าการดูดซับความร้อนที่ 0.84 และ 0.79-0.90 ตามลำดับ ส่วน เซ็งและคณะ ปีราและคณะ และ เฟิงและคณะทดลองชิ้นงานที่เตรียมได้ค่าการดูดซับความร้อนที่ 0.949 0.975 และ 0.95 ตามลำดับ

STATEMENT OF ORIGINALITY

- 1) The ball mill mixing process and the hot press method were used for prepare the coating. This is a quick and easy technique for the preparation of the coating.
- 2) For this work, the results of the coating achieved a solar absorption rating of 0.95. It can be seen that this achieved a similar or higher absorption rate when compared with the work of others. For examples, Roro et al. and Chen and Bostrom reported the absorption rate of 0.84 and 0.79-0.90, respectively. Cheng et al., Bera et al., and Feng et al. reported results of 0.949, 0.975, and 0.95, respectively.
