ACKNOWLEDGEMENT

“Effect of Knee Orthoses on Functional Outcomes in Individuals with Knee Osteoarthritis” This thesis does not only represent an individual’s achievement, but rather an accomplishment attained through the efforts and support of many people.

First and foremost, I would like to thank my mentor and thesis adviser, Associate Professor Dr. Samatchai Chamnongkich, for his constant support throughout the duration of my study program. He was always available whenever I ran into trouble or had question. He gave me independence in conducting research, but at the same time steered me in the right direction whenever he thought I needed it. As a result, I have gained relevant knowledge as well as self-confidence in conducting a research.

I would also like to express my sincere appreciation to the thesis committee for their contributions and suggestions to this thesis as well as all of the instructors from the Department of Physical Therapy, Faculty of Associated Medical Sciences, Chiang Mai University, who have imparted both knowledge and research skills since my first course in the Movement and Exercise Sciences program. My appreciation also goes to Dr. Orawan Verner, a former faculty member, for her assistance in purchasing the braces used in this study. I am thankful for their encouragement, assistance, constructive criticisms and enthusiasm throughout my course work and thesis.

I would also like to acknowledge all of the participants who participated in this study. They were incredibly kind to have taken time off their daily schedule to take part in my research. I am forever indebted to them for their cooperation.

This journey had numerous challenges along the way. However, all these successful milestones would not have come to fruition not for the immense support from my parents. I must express my very profound gratitude to my parents who have shown their utmost unconditional love and for providing unfailing support and continuous encouragement throughout this journey. Additionally, I would like to thank

my extended family, including my relatives, who have provided real-world perspective and opportunities to share with family.

Next, I thank my colleagues in Movement and Exercise Sciences program and physical therapist friends who have offered encouragement, collaboration, sharing ideas and their assistance with research participant recruitment. Over the years, several international friends have also provided encouragement, sharing the experiences, and opportunities for me to improve my language skills.

Again, to all of you who have contributed in so many ways to my research, I wish to express my sincere gratitude and would like to share this collective accomplishment with you. This thesis would not have been possible without you. Thank you.

Amornthep Jankaew

The seal of Chiang Mai University is a circular emblem. In the center is a stylized elephant facing left, with a decorative headdress. Above the elephant is a five-pointed star. The text "CHIANG MAI UNIVERSITY 1964" is written in a circle around the central image. Thai script is also present around the top and sides of the seal.
