LIST OF TABLES

	Page
Table 4.1 Number of samples (n), gender, and means (\bar{X}), standard deviations (SD) and range of the age of each group of patients	29
Table 4.2 Means (mm) and standard deviations of the buccal cortical bone thickness at mesiobuccal (MB) root, middle of buccal furcation (B) and distobuccal (DB) root of maxillary first molar for each vertical level of non-cleft and cleft sides	31
Table 4.3 Means (mm) and standard deviations of the buccal cortical bone thickness at mesiobuccal (MB) root, middle of buccal furcation (B) and distobuccal (DB) root of maxillary first molar for each vertical level in non-cleft patients and non-cleft sides of cleft patients	34
Table 4.4 Means (mm) and standard deviations of the buccal plate thickness at mesiobuccal (MB) root, middle of buccal furcation (B) and distobuccal (DB) root of maxillary first molar for each vertical level of non-cleft sides and cleft sides of unilateral cleft lip and palate patients	35
Table 4.5 Means (mm) and standard deviations of the buccal plate thickness at mesiobuccal (MB) root, middle of buccal furcation (B) and distobuccal (DB) root of maxillary first molar for each vertical level of non-cleft patients and non-cleft side of cleft patients	38
Table 4.6 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle ($^{\circ}$) at MB root of maxillary first molar at non-cleft sides of cleft patients	39
Table 4.7 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle ($^{\circ}$) at MB root of maxillary first molar at cleft sides of cleft patients	39

LIST OF TABLES (CONTINUED)

	Page
Table 4.8 The comparisons of the biting depth at MB root of maxillary first molar between non-cleft and cleft sides of cleft patients	40
Table 4.9 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle (°) at middle of buccal furcation of maxillary first molar at non-cleft sides of cleft patients	41
Table 4.10 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle (°) at middle of buccal furcation of maxillary first molar at cleft sides of cleft patients	41
Table 4.11 The comparisons of the biting depth at middle of buccal furcation of maxillary first molar between non-cleft and cleft sides of cleft patients	42
Table 4.12 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle (°) at DB root of maxillary first molar at non-cleft sides of cleft patients	43
Table 4.13 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle (°) at DB root of maxillary first molar at cleft sides of cleft patients	43
Table 4.14 The comparisons of the biting depth at DB root of maxillary first molar between non-cleft and cleft sides of cleft patients	44
Table 4.15 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle (°) at MB root of maxillary first molar in the non-cleft patients	45
Table 4.16 The comparisons of the biting depth at MB of maxillary first molar between non-cleft sides of cleft patients and non-cleft patients	45

LIST OF TABLES (CONTINUED)

	Page
Table 4.17 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle ($^{\circ}$) at middle of buccal furcation of maxillary first molar in the non-cleft patients	46
Table 4.18 The comparisons of the biting depth at middle of buccal furcation of maxillary first molar between non-cleft sides of cleft patients and non-cleft patients	46
Table 4.19 Means and standard deviations of the biting depth at each combination of vertical cut level (mm) and insertion angle ($^{\circ}$) at DB root of maxillary first molar in the non-cleft patients	47
Table 4.20 The comparisons of the biting depth at DB root of maxillary first molar between non-cleft sides of cleft patients and non-cleft patients	48

LIST OF FIGURES

		Page
Figure 1.1	Maxillary molar occlusal plane	3
Figure 1.2	Buccal cortical bone thickness	4
Figure 1.3	Buccal plate thickness at MB root of 1 st molar	4
Figure 1.4	Buccal plate thickness at the middle of buccal furcation of 1 st molar	5
Figure 1.5	Buccal plate thickness at DB root of 1 st molar	5
Figure 1.6	Biting depth of miniscrew implant	5
Figure 2.1	Chart showing of development of human dentition	8
Figure 2.2	Regions of bone density	12
Figure 2.3	Illustration of IZ crest above MB root of maxillary first molar	14
Figure 3.1	DentiScan (NSTDA, Bangkok, Thailand) CBCT unit	21
Figure 3.2	DentiPlan professional V. 3.0 (NECTEC, Thailand) Viewer program	21
Figure 3.3	Coronal slice orientation	22
Figure 3.4	Sagittal slice orientation	22
Figure 3.5	Axial slice orientation	23
Figure 3.6	The buccal cortical bone and buccal plate thickness were measured at 5 vertical cut levels with 1.2-mm interval from 4.8 – 9.6 mm from the buccal cemento-enamel junction (CEJ) of the maxillary first molar to the root apex.	24
Figure 3.7	In coronal view, the buccal cortical bone and buccal plate thickness was measured at three mesiodistal sections; mesiodistal (MB), middle of buccal furcation(B) and distobuccal (DB) root axis of maxillary first molar.	24

LIST OF FIGURES (CONTINUED)

	Page	
Figure 3.8	Measurement sites at three mesiodistal sections from MB section to DB section of maxillary first molar, and 1.2 mm interval of five vertical cut levels from 4.8 – 9.6 mm from buccal CEJ toward root apex of maxillary first molar. The measurement site marked “x” was named B8.4.	25
Figure 3.9	Axial slice orientation of CBCT image at 4.8 mm vertical cut level, the buccal cortical bone thickness was measured at three sites (blue arrows).	25
Figure 3.10	Axial slice orientation of CBCT image at 4.8 mm vertical cut level, the buccal plate thickness was measured at three mesiodistal sections (blue arrows)	27
Figure 3.11	Measurements of the bone thickness of the IZ crest at MB section: On coronal slice orientation, the bone thickness of the IZ crest at MB9.6 with 45 - 70° were measured	28
Figure 4.1	The combined plots between each vertical cut level and mesiodistal section of the average buccal cortical bone thickness at non-cleft sides in cleft patients	32
Figure 4.2	The combined plots between each vertical cut level and mesiodistal section of the average buccal cortical bone thickness at cleft sides in cleft patients	33
Figure 4.3	The combined plots between each vertical cut level and mesiodistal section of the average buccal plate thickness at non-cleft sides in cleft patients	36
Figure 4.4	The combined plots between each vertical cut level and mesiodistal section of the average buccal plate thickness at cleft sides in cleft patients.	37

Figure 4.5	Mean IZ crest thickness at various sites at non-cleft sides in cleft patients.	50
Figure 4.6	Mean IZ crest thickness at various sites at cleft sides in cleft patients.	51
Figure 5.1	The pattern of the buccal cortical bone and buccal plate thickness at various sites at non-cleft and cleft sides	53
